Contributors

Preface

Audiovisual telecommunications

Broadcast TV systems

Television of improved quality

A NICAM digital stereophonic encoder

Videophony

Multipoint audiovisual telecommunications

Infrastructure standards for digital audiovisual systems

Practical low bit-rate codecs

Variable bit-rate video coding for asynchronous transfer mode networks

Standardization by Iso/MPEG of digital video coding for storage applications

Model-based image coding

Head boundary location using snakes

Image data compression using fractal techniques

Artificial neural nets for image processing in visual telecoms: a review and case study

Index.
