Contents

0.1	Outline, scope, and rationale of the book	xiii
0.2	Preface	xiv
0.2.1	Natural fluid dynamics	xv
0.2.2	Rotating fluid dynamics: GFD Lab 0	xvii
0.2.3	Holicism	xix
1.	Characteristics of the atmosphere	1
1.1	Geometry	1
1.2	Chemical composition of the atmosphere	2
1.3	Physical properties of air	4
1.3.1	Dry air	4
1.3.2	Moist air	5
1.3.3	GFD Lab I: Cloud formation on adiabatic expansion	7
1.4	Problems	7
2.	The global energy balance	9
2.1	Planetary emission temperature	9
2.2	The atmospheric absorption spectrum	13
2.3	The greenhouse effect	14
2.3.1	A simple greenhouse model	14
2.3.2	A leaky greenhouse	16
2.3.3	A more opaque greenhouse	16
2.3.4	Climate feedbacks	19
2.4	Further reading	20
2.5	Problems	20
3.	The vertical structure of the atmosphere	23
3.1	Vertical distribution of temperature and greenhouse gases	23
3.1.1	Typical temperature profile	23
3.1.2	Atmospheric layers	24

3.2	The relationship between pressure and density: hydrostatic balance	26
3.3	Vertical structure of pressure and density	28
3.3.1	Isothermal atmosphere	28
3.3.2	Non-isothermal atmosphere	28
3.3.3	Density	29
3.4	Further reading	29
3.5	Problems	29
4.	Convection	31
4.1	The nature of convection	32
4.1.1	Convection in a shallow fluid	32
4.1.2	Instability	33
4.2	Convection in water	34
4.2.1	Buoyancy	34
4.2.2	Stability	35
4.2.3	Energetics	36
4.2.4	GFD Lab II: Convection	36
4.3	Dry convection in a compressible atmosphere	39
4.3.1	The adiabatic lapse rate (in unsaturated air)	39
4.3.2	Potential temperature	41
4.4	The atmosphere under stable conditions	42
4.4.1	Gravity waves	42
4.4.2	Temperature inversions	44
4.5	Moist convection	46
4.5.1	Humidity	47
4.5.2	Saturated adiabatic lapse rate	49
4.5.3	Equivalent potential temperature	50
4.6	Convection in the atmosphere	50
4.6.1	Types of convection	51
4.6.2	Where does convection occur?	55
4.7	Radiative-convective equilibrium	56
4.8	Further reading	57
4.9	Problems	57
5.	The meridional structure of the atmosphere	61
5.1	Radiative forcing and temperature	62
5.1.1	Incoming radiation	62
5.1.2	Outgoing radiation	63
5.1.3	The energy balance of the atmosphere	64
5.1.4	Meridional structure of temperature	64
5.2	Pressure and geopotential height	67
5.3	Moisture	70
5.4	Winds	73
5.4.1	Distribution of winds	74
5.5	Further reading	78
5.6	Problems	78

-
- 6. The equations of fluid motion 81
 - 6.1 Differentiation following the motion 82
 - 6.2 Equation of motion for a nonrotating fluid 84
 - 6.2.1 Forces on a fluid parcel 84
 - 6.2.2 The equations of motion 86
 - 6.2.3 Hydrostatic balance 87
 - 6.3 Conservation of mass 87
 - 6.3.1 Incompressible flow 88
 - 6.3.2 Compressible flow 88
 - 6.4 Thermodynamic equation 89
 - 6.5 Integration, boundary conditions, and restrictions in application 89
 - 6.6 Equations of motion for a rotating fluid 90
 - 6.6.1 GFD Lab III: Radial inflow 90
 - 6.6.2 Transformation into rotating coordinates 93
 - 6.6.3 The rotating equations of motion 94
 - 6.6.4 GFD Labs IV and V: Experiments with Coriolis forces on a parabolic rotating table 96
 - 6.6.5 Putting things on the sphere 100
 - 6.6.6 GFD Lab VI: An experiment on the Earth's rotation 103
 - 6.7 Further reading 104
 - 6.8 Problems 104
 - 7. Balanced flow 109
 - 7.1 Geostrophic motion 110
 - 7.1.1 The geostrophic wind in pressure coordinates 112
 - 7.1.2 Highs and lows; synoptic charts 114
 - 7.1.3 Balanced flow in the radial-inflow experiment 116
 - 7.2 The Taylor-Proudman theorem 117
 - 7.2.1 GFD Lab VII: Taylor columns 118
 - 7.3 The thermal wind equation 119
 - 7.3.1 GFD Lab VIII: The thermal wind relation 120
 - 7.3.2 The thermal wind equation and the Taylor-Proudman theorem 122
 - 7.3.3 GFD Lab IX: cylinder "collapse" under gravity and rotation 123
 - 7.3.4 Mutual adjustment of velocity and pressure 125
 - 7.3.5 Thermal wind in pressure coordinates 126
 - 7.4 Subgeostrophic flow: the Ekman layer 129
 - 7.4.1 GFD Lab X: Ekman layers: frictionally-induced cross-isobaric flow 130
 - 7.4.2 Ageostrophic flow in atmospheric highs and lows 130
 - 7.4.3 Planetary-scale ageostrophic flow 133
 - 7.5 Problems 135
 - 8. The general circulation of the atmosphere 139
 - 8.1 Understanding the observed circulation 140
 - 8.2 A mechanistic view of the circulation 141
 - 8.2.1 The tropical Hadley circulation 142
 - 8.2.2 The extratropical circulation and GFD Lab XI: Baroclinic instability 145

8.3	Energetics of the thermal wind equation	149
8.3.1	Potential energy for a fluid system	149
8.3.2	Available potential energy	150
8.3.3	Release of available potential energy in baroclinic instability	152
8.3.4	Energetics in a compressible atmosphere	153
8.4	Large-scale atmospheric energy and momentum budget	154
8.4.1	Energy transport	154
8.4.2	Momentum transport	156
8.5	Latitudinal variations of climate	157
8.6	Further reading	158
8.7	Problems	159
9.	The ocean and its circulation	163
9.1	Physical characteristics of the ocean	164
9.1.1	The ocean basins	164
9.1.2	The cryosphere	165
9.1.3	Properties of seawater; equation of state	165
9.1.4	Temperature, salinity, and temperature structure	168
9.1.5	The mixed layer and thermocline	171
9.2	The observed mean circulation	176
9.3	Inferences from geostrophic and hydrostatic balance	182
9.3.1	Ocean surface structure and geostrophic flow	183
9.3.2	Geostrophic flow at depth	184
9.3.3	Steric effects	186
9.3.4	The dynamic method	187
9.4	Ocean eddies	188
9.4.1	Observations of ocean eddies	188
9.5	Further reading	189
9.6	Problems	190
10.	The wind-driven circulation	197
10.1	The wind stress and Ekman layers	198
10.1.1	Balance of forces and transport in the Ekman layer	199
10.1.2	Ekman pumping and suction and GFD Lab XII	201
10.1.3	Ekman pumping and suction induced by large-scale wind patterns	203
10.2	Response of the interior ocean to Ekman pumping	206
10.2.1	Interior balances	206
10.2.2	Wind-driven gyres and western boundary currents	206
10.2.3	Taylor-Proudman on the sphere	207
10.2.4	GFD Lab XIII: Wind-driven ocean gyres	211
10.3	The depth-integrated circulation: Sverdrup theory	213
10.3.1	Rationalization of position, sense of circulation, and volume transport of ocean gyres	214
10.4	Effects of stratification and topography	216
10.4.1	Taylor-Proudman in a layered ocean	217
10.5	Baroclinic instability in the ocean	218
10.6	Further reading	220
10.7	Problems	220

11. The thermohaline circulation of the ocean	223
11.1 Air-sea fluxes and surface property distributions	224
11.1.1 Heat, freshwater, and buoyancy fluxes	224
11.1.2 Interpretation of surface temperature distributions	231
11.1.3 Sites of deep convection	232
11.2 The observed thermohaline circulation	234
11.2.1 Inferences from interior tracer distributions	234
11.2.2 Time scales and intensity of thermohaline circulation	239
11.3 Dynamical models of the thermohaline circulation	239
11.3.1 Abyssal circulation schematic deduced from Taylor-Proudman on the sphere	239
11.3.2 GFD Lab XIV: The abyssal circulation	241
11.3.3 Why western boundary currents?	243
11.3.4 GFD Lab XV: Source sink flow in a rotating basin	245
11.4 Observations of abyssal ocean circulation	245
11.5 The ocean heat budget and transport	247
11.5.1 Meridional heat transport	248
11.5.2 Mechanisms of ocean heat transport and the partition of heat transport between the atmosphere and ocean	251
11.6 Freshwater transport by the ocean	255
11.7 Further reading	256
11.8 Problems	256
12. Climate and climate variability	259
12.1 The ocean as a buffer of temperature change	261
12.1.1 Nonseasonal changes in SST	262
12.2 El Niño and the Southern Oscillation	264
12.2.1 Interannual variability	264
12.2.2 "Normal" conditions—equatorial upwelling and the Walker circulation	266
12.2.3 ENSO	269
12.2.4 Other modes of variability	273
12.3 Paleoclimate	273
12.3.1 Climate over Earth history	275
12.3.2 Paleotemperatures over the past 70 million years: the $\delta^{18}\text{O}$ record	277
12.3.3 Greenhouse climates	280
12.3.4 Cold climates	280
12.3.5 Glacial-interglacial cycles	282
12.3.6 Global warming	291
12.4 Further reading	292
12.5 Problems	292
Appendices	295
A.1 Derivations	295
A.1.1 The Planck function	295
A.1.2 Computation of available potential energy	296
A.1.3 Internal energy for a compressible atmosphere	296

A.2	Mathematical definitions and notation	296
A.2.1	Taylor expansion	296
A.2.2	Vector identities	297
A.2.3	Polar and spherical coordinates	298
A.3	Use of foraminifera shells in paleoclimate	298
A.4	Laboratory experiments	299
A.4.1	Rotating tables	299
A.4.2	List of laboratory experiments	300
A.5	Figures and access to data over the web	302
