Jim Stasheff
Editors

Associahedra, Tamari Lattices and Related Structures

Tamari Memorial Festschrift

 Birkhäuser

Contents

Dov Tamari (formerly Bernhard Teitler)	1
Folkert Müller-Hoissen and Hans-Otto Walther	
1 Germany	1
2 Palestine	4
3 France	7
4 Tamari's thesis and beyond	9
5 Israel	14
6 Via Princeton to Brazil	16
7 The Netherlands	20
8 USA	22
9 Tamari-Technion Affair	24
9.1 Freudenthal's initiative	26
9.2 AMS and CAFTES	29
10 After retirement	31
10.1 Mathematical activities	31
10.2 Back to the roots	32
11 Further recollections	34
References	36
On Being a Student of Dov Tamari	41
Carl Maxson	
How I 'met' Dov Tamari	45
Jim Stasheff	
1 Introduction/History	45
1.1 The so-called Stasheff polytope	46
1.2 Giving due credit	48
1.3 Outline of this paper	49
2 Realization	50
3 Other polytopes	52
3.1 Multiplihedra	53

3.2	Cyclohedra and generalized associahedra	54
3.3	Compactified configuration spaces	55
4	Applications	55
4.1	Coderivation interpretation and curvature	56
4.2	Pentagonal algebras	57
4.3	The pentagonal algebra of open string field theory	58
4.4	A_n -structures for $4 < n \leq \infty$	60
5	Opportunities – missed and not	60
	References	61
	Dichotomy of the Addition of Natural Numbers	65
	Jean-Louis Loday	
1	About the formula $1 + 1 = 2$	66
2	Splitting the integers into pieces	66
3	Trees and addition on trees	67
4	Where we show that $1 + 1 = 2$ and $2 + 1 = 3$	69
5	The integers as molecules	70
6	Multiplication of trees	71
7	Trees and polynomials	72
8	Realizing the associahedron	73
8.1	Tamari poset	73
8.2	Associahedron and regular pentagons	74
8.3	Realizations of the associahedron	75
9	Associahedron and the trefoil knot	77
	References	78
	Partial Groupoid Embeddings in Semigroups	81
	Susan H. Gensemer	
1	Introduction	81
2	Definitions and preliminary results	82
3	Results	84
4	Further results	89
4.1	Embedding into a partially ordered semigroup	89
4.2	Embedding into a commutative semigroup	95
5	Conclusion	96
	References	96
	Moduli Spaces of Punctured Poincaré Disks	99
	Satyan L. Devadoss, Benjamin Fehrman, Timothy Heath, and Aditi Vashist	
1	Motivation from physics	99
2	Particles on the Poincaré disk	101
3	The Fulton-McPherson compactification	106
4	Group actions on screens	110
5	Combinatorial results	114
	References	117

Realizing the Associahedron: Mysteries and Questions	119
Cesar Ceballos and Günter M. Ziegler	
1	Introduction
2	Realization space
3	Vertices on a sphere
4	Realizing the multiassociahedron
	References
Permutahedra and Associahedra	129
Christophe Hohlweg	
1	Introduction
2	Permutahedra and finite reflection groups
2.1	Finite reflection groups
2.2	Permutahedra as \mathcal{V} -polytopes
2.3	Root systems and permutahedra as \mathcal{H} -polytopes
2.4	Faces of permutahedra and the weak order
3	Coxeter generalized associahedra
3.1	Coxeter elements and Coxeter singletons
3.2	Coxeter generalized associahedra as \mathcal{H} -polytopes
3.3	Faces and almost positive roots
3.4	Edges and Cambrian lattices
3.5	Isometry classes
3.6	Integer coordinates
4	Further developments
	References
Combinatorial 2-truncated Cubes and Applications	161
Victor M. Buchstaber and Vadim D. Volodin	
1	Introduction
2	Simple polytopes
2.1	Enumerative polynomials
3	Class of 2-truncated cubes
4	Smooth toric varieties over 2-truncated cubes
5	Small covers of 2-truncated cubes
6	Nestohedra and graph-associahedra
7	Building set as a structure
8	Flag nestohedra as 2-truncated cubes
9	Recursion formulas
9.1	Associahedra
9.2	Cyclohedra
9.3	Permutohedra
9.4	Stellohedra
10	Bounds of face polynomials for flag nestohedra and graph-associahedra
11	Nested polytopes and graph-cubeahedra as 2-truncated cubes

Extending the Tamari Lattice to Some Compositions of Species	187
Stefan Forcey	
1 Introduction	187
1.1 Species	189
2 Several flavors of trees	190
2.1 Ordered, bi-leveled and painted trees	190
2.2 Trees with corollas	194
3 Interval retracts	195
4 Lattices and polytopes	200
5 Algebraic implications of interval retracts	205
5.1 Coalgebras of trees	206
5.2 Cofree composition of coalgebras	207
5.3 The coalgebra of painted trees	208
References	209
Tamari Lattices and the Symmetric Thompson Monoid	211
Patrick Dehornoy	
1 The framework	212
1.1 Parenthesized expressions and associativity	212
1.2 Trees and rotations	213
1.3 Richard Thompson's group F	215
1.4 The action of F on trees	216
1.5 The generators a_α	219
1.6 Presentation of F in terms of the elements a_α	220
2 A lattice structure on the Thompson group F	223
2.1 The symmetric Thompson monoid F_{sym}^+	223
2.2 Subword reversing	225
2.3 The lattice structure of F_{sym}^+	230
2.4 Computing the operations	232
3 The Polish normal form on F	235
3.1 The Polish encoding of trees	236
3.2 The Polish algorithm	237
3.3 The covering relation	239
3.4 The Polish normal form	243
4 Distance in Tamari lattices	244
4.1 The diameter of \mathcal{T}_n	244
4.2 Syntactic invariants	245
4.3 The embedding of F_{sym}^+ into F	247
References	249
Parenthetic Remarks	251
