Preface	v
<b>Part I Spectral theorems and convergence in mean</b>	<b>1</b>
<b>1 The von Neumann theorem and spectral regularization</b>	<b>3</b>
1.1 Bochner–Herglotz lemma . . . . .	3
1.2 The spectral inequality . . . . .	8
1.3 The von Neumann theorem . . . . .	10
1.4 The spectral regularization inequality . . . . .	26
1.5 Moving averages . . . . .	44
1.6 Uniform distribution mod $a$ – the Weyl criterion . . . . .	51
1.7 The van der Corput principle . . . . .	55
<b>2 Spectral representation of weakly stationary processes</b>	<b>61</b>
2.1 Weakly stationary processes . . . . .	61
2.2 Spectral representation of unitary operators . . . . .	64
2.3 Elements of stochastic integration . . . . .	76
2.4 Spectral representation of weakly stationary processes . . . . .	78
2.5 Weakly stationary sequences and orthogonal series . . . . .	80
2.6 Gaposhkin’s spectral criterion . . . . .	85
<b>Part II Ergodic Theorems</b>	<b>91</b>
<b>3 Dynamical systems – ergodicity and mixing</b>	<b>93</b>
3.1 Measurable dynamical systems – topological dynamical systems . . . . .	93
3.2 Ergodicity of a dynamical system . . . . .	101
3.3 Weak mixing, strong mixing, continuous spectrum . . . . .	103
3.4 Spectral mixing theorem . . . . .	110
3.5 Other equivalences and other forms of mixing . . . . .	114
3.6 Examples . . . . .	121
<b>4 Pointwise ergodic theorems</b>	<b>129</b>
4.1 Birkhoff’s pointwise theorem . . . . .	129
4.2 Dominated ergodic theorems . . . . .	139
4.3 Classes $L \log^m L$ . . . . .	144
4.4 A converse . . . . .	145

4.5	Speed of convergence . . . . .	148
4.6	Oscillation functions of ergodic averages . . . . .	152
4.7	Wiener–Wintner theorem . . . . .	165
4.8	Weighted ergodic averages . . . . .	168
4.9	Subsequence averages . . . . .	193
<b>5</b>	<b>Banach principle and continuity principle</b>	<b>200</b>
5.1	Banach principle . . . . .	200
5.2	Continuity principle . . . . .	206
5.3	Applications . . . . .	217
5.4	A principle of domination – conjugacy lemma . . . . .	226
<b>6</b>	<b>Maximal operators and Gaussian processes</b>	<b>230</b>
6.1	Some liaison theorems . . . . .	230
6.2	Two preliminary lemmas . . . . .	242
6.3	Proof of Theorem 6.1.1 . . . . .	247
6.4	Proof of Theorem 6.1.6 . . . . .	249
6.5	The case $L^p$ , $1 < p < 2$ . . . . .	254
6.6	A remarkable GB set property . . . . .	259
<b>7</b>	<b>The central limit theorem for dynamical systems</b>	<b>267</b>
7.1	Introduction and preliminaries . . . . .	267
7.2	A theorem of Burton and Denker . . . . .	269
7.3	The central limit theorem for orbits . . . . .	284
7.4	A theorem of Volný . . . . .	289
7.5	CLT for rotations . . . . .	291
7.6	Lacunary series and convergence in variation . . . . .	315
<b>Part III</b>	<b>Methods arising from the theory of stochastic processes</b>	<b>339</b>
<b>8</b>	<b>The metric entropy method</b>	<b>341</b>
8.1	Introduction and general results . . . . .	341
8.2	A theorem of Stechkin . . . . .	349
8.3	An application to the quantitative Borel–Cantelli lemma . . . . .	353
8.4	Application to Gál–Koksma’s theorems . . . . .	364
8.5	An application to the supremum of random polynomials . . . . .	369
8.6	Application to a.s. convergence of weighted series of contractions . . . . .	387
8.7	An application to random perturbation of intersective sets . . . . .	403
8.8	An application to the discrepancy of some random sequences . . . . .	409
8.9	An application to random Dirichlet polynomials . . . . .	415
<b>9</b>	<b>The majorizing measure method</b>	<b>433</b>
9.1	Introduction – the exponential case . . . . .	433

9.2	A general approach . . . . .	438
9.3	A useful criterion . . . . .	447
9.4	Proof of Theorem 9.3.3 . . . . .	457
9.5	Proof of Theorems 9.3.10 and 9.3.11 . . . . .	469
9.6	Proof of Theorem 9.3.12 and some examples . . . . .	471
9.7	A stronger form of Salem–Zygmund’s estimate . . . . .	475
9.8	Some examples and discussion . . . . .	478
9.9	Uniform convergence of random Fourier series . . . . .	488

<b>10</b>	<b>Gaussian processes</b>	<b>491</b>
10.1	Gaussian variables and correlation estimates . . . . .	491
10.2	0-1 laws, integrability and comparison lemmas . . . . .	504
10.3	Regularity and irregularity of Gaussian processes . . . . .	510
10.4	Gaussian suprema . . . . .	517
10.5	Oscillations of Gaussian Stein’s elements . . . . .	529
10.6	Tightness of Gaussian Stein’s elements . . . . .	537

## **Part IV Three studies** 547

<b>11</b>	<b>Riemann sums</b>	<b>549</b>
11.1	Introduction . . . . .	549
11.2	The results of Jessen and Rudin . . . . .	551
11.3	Individual theorems of spectral type . . . . .	554
11.4	Breadth and dimension . . . . .	557
11.5	Bourgain’s results . . . . .	562
11.6	Connection with number theory . . . . .	565
11.7	Riemann sums and the randomly sampled trigonometric system . . . . .	573
11.8	Almost sure convergence and square functions of Riemann sums . . . . .	587

<b>12</b>	<b>A study of the system <math>(f(nx))</math></b>	<b>601</b>
12.1	Introduction and mean convergence . . . . .	601
12.2	Almost sure convergence – sufficient conditions . . . . .	611
12.3	Almost sure convergence – necessary conditions . . . . .	634
12.4	Random sequences . . . . .	642

<b>13</b>	<b>Divisors and random walks</b>	<b>659</b>
13.1	Introduction . . . . .	659
13.2	Value distribution and small divisors of Bernoulli sums . . . . .	661
13.3	An LIL for arithmetic functions . . . . .	675
13.4	On the order of magnitude of the divisor functions . . . . .	685
13.5	Value distribution of the divisors of $n^2 + 1$ . . . . .	691
13.6	Value distribution of the divisors of Rademacher sums . . . . .	699
13.7	The functional equation and the Lindelöf Hypothesis . . . . .	701

13.8 An extremal divisor case . . . . .	711
Bibliography	729
Index	759
