

Desanka P. Radunović, Ph. D.

WAVELETS

from MATH to PRACTICE

 Springer

ACADEMIC MIND

Contents

1	Introduction	1
2	Least-squares approximation	7
2.1	Basic notations and properties	7
2.2	Fourier analysis	12
2.3	Fourier transform	20
2.4	Wavelet transform	29
3	Multiresolution	35
3.1	Multiresolution analysis	35
3.2	Function decomposition	39
3.3	Pyramid algorithm	45
3.4	Construction of multiresolution	47
4	Wavelets	55
4.1	Dilatation equation	56
4.2	Frequency domain	59
4.3	Matrix interpretation	63
4.4	Properties	69
4.5	Convergence	75
5	How to compute	83
5.1	Discrete wavelet transform	83
5.2	Daubechies wavelets	93
5.3	Biorthogonal wavelets	95
5.4	Cardinal B-splines	98
5.5	Interpolation wavelets	105
5.6	Second generation wavelets	111
5.7	Nonstandard wavelets	116
6	Analogy with filters	123
6.1	Signal	123
6.2	Filter	126
6.3	Orthogonal filter bank	131

6.4	Daubechies filters	138
6.5	Filter properties important for wavelets	144
7	Applications	149
7.1	Signal and image processing	149
7.2	Numerical modeling	153
