

Evidence of climate change, resource shortages and biodiversity loss is growing in significance year by year. This second edition of *Environmental Policy* explains how policy can respond and bring about greater sustainability in individual lifestyles, corporate strategies, national policies and international relations. The book discusses the interaction between environmental and human systems, suggesting environmental policy as a way to steer human systems to function within environmental constraints.

The second edition has been completely updated to reflect advances in scholarship (for example developments in governance theory) and the increasing primacy of climate policy within environmental policy as a whole. Key political, social and economic concepts are used to explain how effective environmental policies can be designed, implemented and evaluated. Environmental problems, the role of human beings in creating them and sustainable development are all introduced. Environmental policy formulation, implementation and evaluation are discussed within three specific contexts: the firm, the nation state and at an international level. The book reviews the relationship of economics, science and technology to environmental policy, and ends by reflecting upon the predicament of humankind in the twenty-first century and the potential to achieve sustainability through the use of the environmental policy 'toolbox'.

*Environmental Policy* is an accessible text with a multi-disciplinary perspective. Lively case studies drawn from a range of international examples, and completely updated for this second edition, illustrate issues such as climate change, international trade, tourism and human rights. It includes chapter summaries, suggestions for further reading and links to relevant web resources.

**Jane Roberts** is an Associate Member of the Development Policy and Practice Group at the Open University. She is an environmental policy analyst with strong interests in education for sustainable development. Her PhD studied the role of environmental interest groups in UK electricity privatisation. Jane was awarded a Teaching Fellowship by the University of Gloucestershire in 2005 and in 2009 achieved Associate Fellowship of the Staff and Educational Development Association (SEDA). She is a Fellow of the Higher Education Academy.
