PART I MOLECULAR STRUCTURE AND THERMODYNAMICS

CHAPTER 1: Introduction to Structure and Models of Bonding 3

Intent and Purpose 3

1.1 A Review of Basic Bonding Concepts	4
1.1.1 Quantum Numbers and Atomic Orbitals	4
1.1.2 Electron Configurations and Electronic Diagrams	5
1.1.3 Lewis Structures	6
1.1.4 Formal Charge	6
1.1.5 VSEPR	7
1.1.6 Hybridization	8
1.1.7 A Hybrid Valence Bond / Molecular Orbital Model of Bonding	10
<i>Creating Localized σ and π Bonds</i>	11
1.1.8 Polar Covalent Bonding	12
<i>Electronegativity</i>	12
<i>Electrostatic Potential Surfaces</i>	14
<i>Inductive Effects</i>	15
<i>Group Electronegativities</i>	16
<i>Hybridization Effects</i>	17
1.1.9 Bond Dipoles, Molecular Dipoles, and Quadrupoles	17
<i>Bond Dipoles</i>	17
<i>Molecular Dipole Moments</i>	18
<i>Molecular Quadrupole Moments</i>	19
1.1.10 Resonance	20
1.1.11 Bond Lengths	22
1.1.12 Polarizability	24
1.1.13 Summary of Concepts Used for the Simplest Model of Bonding in Organic Structures	26
1.2 A More Modern Theory of Organic Bonding	26
1.2.1 Molecular Orbital Theory	27
1.2.2 A Method for QMOT	28
1.2.3 Methyl in Detail	29
<i>Planar Methyl</i>	29
<i>The Walsh Diagram: Pyramidal Methyl</i>	31
<i>"Group Orbitals" for Pyramidal Methyl</i>	32
<i>Putting the Electrons In—The MH_3 System</i>	33
1.2.4 The CH_2 Group in Detail	33
<i>The Walsh Diagram and Group Orbitals</i>	33
<i>Putting the Electrons In—The MH_2 System</i>	33
1.3 Orbital Mixing—Building Larger Molecules	35
1.3.1 Using Group Orbitals to Make Ethane	36

1.3.2 Using Group Orbitals to Make Ethylene	38
1.3.3 The Effects of Heteroatoms—Formaldehyde	40
1.3.4 Making More Complex Alkanes	43
1.3.5 Three More Examples of Building Larger Molecules from Group Orbitals	43
<i>Propene</i>	43
<i>Methyl Chloride</i>	45
<i>Butadiene</i>	46
1.3.6 Group Orbitals of Representative π Systems: Benzene, Benzyl, and Allyl	46
1.3.7 Understanding Common Functional Groups as Perturbations of Allyl	49
1.3.8 The Three Center—Two Electron Bond	50
1.3.9 Summary of the Concepts Involved in Our Second Model of Bonding	51

1.4 Bonding and Structures of Reactive Intermediates 52

1.4.1 Carbocations	52
<i>Carbenium Ions</i>	53
<i>Interplay with Carbonium Ions</i>	54
<i>Carbonium Ions</i>	55
1.4.2 Carbanions	56
1.4.3 Radicals	57
1.4.4 Carbenes	58

1.5 A Very Quick Look at Organometallic and Inorganic Bonding 59

Summary and Outlook 61

EXERCISES 62

FURTHER READING 64

CHAPTER 2: Strain and Stability 65

Intent and Purpose 65

2.1 Thermochemistry of Stable Molecules	66
2.1.1 The Concepts of Internal Strain and Relative Stability	66
2.1.2 Types of Energy	68
<i>Gibbs Free Energy</i>	68
<i>Enthalpy</i>	69
<i>Entropy</i>	70
2.1.3 Bond Dissociation Energies	70
<i>Using BDEs to Predict Exothermicity and Endothermicity</i>	72
2.1.4 An Introduction to Potential Functions and Surfaces—Bond Stretches	73
<i>Infrared Spectroscopy</i>	77
2.1.5 Heats of Formation and Combustion	77
2.1.6 The Group Increment Method	79
2.1.7 Strain Energy	82

2.2 Thermochemistry of Reactive Intermediates 82

2.2.1 Stability vs. Persistence 82

2.2.2 Radicals 83

*BDEs as a Measure of Stability 83**Radical Persistence 84**Group Increments for Radicals 86*

2.2.3 Carbocations 87

*Hydride Ion Affinities as a Measure of Stability 87**Lifetimes of Carbocations 90*

2.2.4 Carbanions 91

2.2.5 Summary 91

**2.3 Relationships Between Structure and Energetics—
Basic Conformational Analysis 92**

2.3.1 Acyclic Systems—Torsional Potential Surfaces 92

*Ethane 92**Butane—The Gauche Interaction 95**Barrier Height 97**Barrier Foldedness 97**Tetraalkylethanes 98**The g+g- Pentane Interaction 99**Allylic ($A^{1,3}$) Strain 100*

2.3.2 Basic Cyclic Systems 100

*Cyclopropane 100**Cyclobutane 100**Cyclopentane 101**Cyclohexane 102**Larger Rings—Transannular Effects 107**Group Increment Corrections for Ring Systems 109**Ring Torsional Modes 109**Bicyclic Ring Systems 110**Cycloalkenes and Bredt's Rule 110**Summary of Conformational Analysis and**Its Connection to Strain 112***2.4 Electronic Effects 112**2.4.1 Interactions Involving π Systems 112*Substitution on Alkenes 112**Conformations of Substituted Alkenes 113**Conjugation 115**Aromaticity 116**Antiaromaticity, An Unusual Destabilizing Effect 117**NMR Chemical Shifts 118**Polycyclic Aromatic Hydrocarbons 119**Large Annulenes 119*

2.4.2 Effects of Multiple Heteroatoms 120

*Bond Length Effects 120**Orbital Effects 120***2.5 Highly-Strained Molecules 124**

2.5.1 Long Bonds and Large Angles 124

2.5.2 Small Rings 125

2.5.3 Very Large Rotation Barriers 127

2.6 Molecular Mechanics 128

2.6.1 The Molecular Mechanics Model 129

*Bond Stretching 129**Angle Bending 130**Torsion 130**Nonbonded Interactions 130**Cross Terms 131**Electrostatic Interactions 131**Hydrogen Bonding 131**The Parameterization 132**Heat of Formation and Strain Energy 132*2.6.2 General Comments on the Molecular
Mechanics Method 1332.6.3 Molecular Mechanics on Biomolecules and
Unnatural Polymers—"Modeling" 135

2.6.4 Molecular Mechanics Studies of Reactions 136

Summary and Outlook 137**EXERCISES 138****FURTHER READING 143**

**CHAPTER 3: Solutions and Non-Covalent
Binding Forces 145****Intent and Purpose 145****3.1 Solvent and Solution Properties 145**

3.1.1 Nature Abhors a Vacuum 146

3.1.2 Solvent Scales 146

*Dielectric Constant 147**Other Solvent Scales 148**Heat of Vaporization 150**Surface Tension and Wetting 150**Water 151*

3.1.3 Solubility 153

*General Overview 153**Shape 154**Using the "Like-Dissolves-Like" Paradigm 154*

3.1.4 Solute Mobility 155

*Diffusion 155**Fick's Law of Diffusion 156**Correlation Times 156*

3.1.5 The Thermodynamics of Solutions 157

*Chemical Potential 158**The Thermodynamics of Reactions 160**Calculating ΔH° and ΔS° 162***3.2 Binding Forces 162**

3.2.1 Ion Pairing Interactions 163

Salt Bridges 164

3.2.2 Electrostatic Interactions Involving Dipoles 165

*Ion-Dipole Interactions 165**A Simple Model of Ionic Solvation—**The Born Equation 166**Dipole-Dipole Interactions 168*

3.2.3 Hydrogen Bonding 168

*Geometries 169**Strengths of Normal Hydrogen Bonds 171**i. Solvation Effects 171**ii. Electronegativity Effects 172**iii. Resonance Assisted Hydrogen Bonds 173**iv. Polarization Enhanced Hydrogen Bonds 174**v. Secondary Interactions in Hydrogen**Bonding Systems 175*

vi. Cooperativity in Hydrogen Bonds	175
Vibrational Properties of Hydrogen Bonds	176
Short-Strong Hydrogen Bonds	177
3.2.4 π Effects	180
Cation- π Interactions	181
Polar- π Interactions	183
Aromatic-Aromatic Interactions (π Stacking)	184
The Arene-Perfluoroarene Interaction	184
π Donor-Acceptor Interactions	186
3.2.5 Induced-Dipole Interactions	186
Ion-Induced-Dipole Interactions	187
Dipole-Induced-Dipole Interactions	187
Induced-Dipole-Induced-Dipole Interactions	188
Summarizing Monopole, Dipole, and Induced-Dipole Binding Forces	188
3.2.6 The Hydrophobic Effect	189
Aggregation of Organics	189
The Origin of the Hydrophobic Effect	192
3.3 Computational Modeling of Solvation	194
3.3.1 Continuum Solvation Models	196
3.3.2 Explicit Solvation Models	197
3.3.3 Monte Carlo (MC) Methods	198
3.3.4 Molecular Dynamics (MD)	199
3.3.5 Statistical Perturbation Theory / Free Energy Perturbation	200
Summary and Outlook	201
EXERCISES	202
FURTHER READING	204

CHAPTER 4: Molecular Recognition and Supramolecular Chemistry 207

Intent and Purpose 207

4.1 Thermodynamic Analyses of Binding Phenomena	207
4.1.1 General Thermodynamics of Binding	208
The Relevance of the Standard State	210
The Influence of a Change in Heat Capacity	212
Cooperativity	213
Enthalpy-Entropy Compensation	216
4.1.2 The Binding Isotherm	216
4.1.3 Experimental Methods	219
UV/Vis or Fluorescence Methods	220
NMR Methods	220
Isothermal Calorimetry	221
4.2 Molecular Recognition	222
4.2.1 Complementarity and Preorganization	224
Crowns, Cryptands, and Spherands—Molecular Recognition with a Large Ion-Dipole Component	224
Tweezers and Clefts	228
4.2.2 Molecular Recognition with a Large Ion Pairing Component	228
4.2.3 Molecular Recognition with a Large Hydrogen Bonding Component	230
Representative Structures	230

Molecular Recognition via Hydrogen Bonding in Water	232
4.2.4 Molecular Recognition with a Large Hydrophobic Component	234
Cyclodextrins	234
Cyclophanes	234
A Summary of the Hydrophobic Component of Molecular Recognition in Water	238
4.2.5 Molecular Recognition with a Large π Component	239
Cation- π Interactions	239
Polar- π and Related Effects	241
4.2.6 Summary	241
4.3 Supramolecular Chemistry	243
4.3.1 Supramolecular Assembly of Complex Architectures	244
Self-Assembly via Coordination Compounds	244
Self-Assembly via Hydrogen Bonding	245
4.3.2 Novel Supramolecular Architectures—Catenanes, Rotaxanes, and Knots	246
Nanotechnology	248
4.3.3 Container Compounds—Molecules within Molecules	249

Summary and Outlook 252

EXERCISES 253

FURTHER READING 256

CHAPTER 5: Acid-Base Chemistry 259

Intent and Purpose 259

5.1 Brønsted Acid-Base Chemistry	259
5.2 Aqueous Solutions	261
5.2.1 pK_a	261
5.2.2 pH	262
5.2.3 The Leveling Effect	264
5.2.4 Activity vs. Concentration	266
5.2.5 Acidity Functions: Acidity Scales for Highly Concentrated Acidic Solutions	266
5.2.6 Super Acids	270
5.3 Nonaqueous Systems	271
5.3.1 pK_a Shifts at Enzyme Active Sites	273
5.3.2 Solution Phase vs. Gas Phase	273
5.4 Predicting Acid Strength in Solution	276
5.4.1 Methods Used to Measure Weak Acid Strength	276
5.4.2 Two Guiding Principles for Predicting Relative Acidities	277
5.4.3 Electronegativity and Induction	278
5.4.4 Resonance	278
5.4.5 Bond Strengths	283
5.4.6 Electrostatic Effects	283
5.4.7 Hybridization	283

5.4.8 Aromaticity	284
5.4.9 Solvation	284
5.4.10 Cationic Organic Structures	285
5.5 Acids and Bases of Biological Interest	285
5.6 Lewis Acids/Bases and Electrophiles/ Nucleophiles	288
5.6.1 The Concept of Hard and Soft Acids and Bases, General Lessons for Lewis Acid–Base Interactions, and Relative Nucleophilicity and Electrophilicity	289
Summary and Outlook	292
EXERCISES	292
FURTHER READING	294
<hr/>	
CHAPTER 6: Stereochemistry	297
Intent and Purpose	297
6.1 Stereogenicity and Stereoisomerism	297
6.1.1 Basic Concepts and Terminology	298
<i>Classic Terminology</i>	299
<i>More Modern Terminology</i>	301
6.1.2 Stereochemical Descriptors	303
<i>R,S System</i>	304
<i>E,Z System</i>	304
<i>D and L</i>	304
<i>Erythro and Threo</i>	305
<i>Helical Descriptors—M and P</i>	305
<i>Ent and Epi</i>	306
<i>Using Descriptors to Compare Structures</i>	306
6.1.3 Distinguishing Enantiomers	306
<i>Optical Activity and Chirality</i>	309
<i>Why is Plane Polarized Light Rotated by a Chiral Medium?</i>	309
<i>Circular Dichroism</i>	310
<i>X-Ray Crystallography</i>	310
6.2 Symmetry and Stereochemistry	311
6.2.1 Basic Symmetry Operations	311
6.2.2 Chirality and Symmetry	311
6.2.3 Symmetry Arguments	313
6.2.4 Focusing on Carbon	314
6.3 Topicity Relationships	315
6.3.1 Homotopic, Enantiotopic, and Diastereotopic	315
6.3.2 Topicity Descriptors—Pro-R/Pro-S and Re/Si	316
6.3.3 Chirotopicity	317
6.4 Reaction Stereochemistry: Stereoselectivity and Stereospecificity	317
6.4.1 Simple Guidelines for Reaction Stereochemistry	317
6.4.2 Stereospecific and Stereoselective Reactions	319
6.5 Symmetry and Time Scale	322
6.6 Topological and Supramolecular Stereochemistry	324
6.6.1 Loops and Knots	325
6.6.2 Topological Chirality	326

6.6.3 Nonplanar Graphs	326
6.6.4 Achievements in Topological and Supramolecular Stereochemistry	327
6.7 Stereochemical Issues in Polymer Chemistry	331
6.8 Stereochemical Issues in Chemical Biology	333
6.8.1 The Linkages of Proteins, Nucleic Acids, and Polysaccharides	333
<i>Proteins</i>	333
<i>Nucleic Acids</i>	334
<i>Polysaccharides</i>	334
6.8.2 Helicity	336
<i>Synthetic Helical Polymers</i>	337
6.8.3 The Origin of Chirality in Nature	339
6.9 Stereochemical Terminology	340
Summary and Outlook	344
EXERCISES	344
FURTHER READING	350
<hr/>	

PART II REACTIVITY, KINETICS, AND MECHANISMS

CHAPTER 7: Energy Surfaces and Kinetic Analyses 355

Intent and Purpose	355
7.1 Energy Surfaces and Related Concepts	356
7.1.1 Energy Surfaces	357
7.1.2 Reaction Coordinate Diagrams	359
7.1.3 What is the Nature of the Activated Complex/Transition State?	362
7.1.4 Rates and Rate Constants	363
7.1.5 Reaction Order and Rate Laws	364
7.2 Transition State Theory (TST) and Related Topics	365
7.2.1 The Mathematics of Transition State Theory	365
7.2.2 Relationship to the Arrhenius Rate Law	367
7.2.3 Boltzmann Distributions and Temperature Dependence	368
7.2.4 Revisiting “What is the Nature of the Activated Complex?” and Why Does TST Work?	369
7.2.5 Experimental Determinations of Activation Parameters and Arrhenius Parameters	370
7.2.6 Examples of Activation Parameters and Their Interpretations	372
7.2.7 Is TST Completely Correct? The Dynamic Behavior of Organic Reactive Intermediates	372
7.3 Postulates and Principles Related to Kinetic Analysis	374
7.3.1 The Hammond Postulate	374
7.3.2 The Reactivity vs. Selectivity Principle	377

7.3.3 The Curtin–Hammett Principle	378		
7.3.4 Microscopic Reversibility	379		
7.3.5 Kinetic vs. Thermodynamic Control	380		
7.4 Kinetic Experiments	382		
7.4.1 How Kinetic Experiments are Performed	382		
7.4.2 Kinetic Analyses for Simple Mechanisms	384		
<i>First Order Kinetics</i>	385		
<i>Second Order Kinetics</i>	386		
<i>Pseudo-First Order Kinetics</i>	387		
<i>Equilibrium Kinetics</i>	388		
<i>Initial-Rate Kinetics</i>	389		
<i>Tabulating a Series of Common Kinetic Scenarios</i>	389		
7.5 Complex Reactions—Deciphering Mechanisms	390		
7.5.1 Steady State Kinetics	390		
7.5.2 Using the SSA to Predict Changes in Kinetic Order	395		
7.5.3 Saturation Kinetics	396		
7.5.4 Prior Rapid Equilibria	397		
7.6 Methods for Following Kinetics	397		
7.6.1 Reactions with Half-Lives Greater than a Few Seconds	398		
7.6.2 Fast Kinetics Techniques	398		
<i>Flow Techniques</i>	399		
<i>Flash Photolysis</i>	399		
<i>Pulse Radiolysis</i>	401		
7.6.3 Relaxation Methods	401		
7.6.4 Summary of Kinetic Analyses	402		
7.7 Calculating Rate Constants	403		
7.7.1 Marcus Theory	403		
7.7.2 Marcus Theory Applied to Electron Transfer	405		
7.8 Considering Multiple Reaction Coordinates	407		
7.8.1 Variation in Transition State Structures Across a Series of Related Reactions—An Example Using Substitution Reactions	407		
7.8.2 More O’Ferrall–Jencks Plots	409		
7.8.3 Changes in Vibrational State Along the Reaction Coordinate—Relating the Third Coordinate to Entropy	412		
Summary and Outlook	413		
EXERCISES	413		
FURTHER READING	417		
<hr/>			
CHAPTER 8: Experiments Related to Thermodynamics and Kinetics	421		
Intent and Purpose	421		
8.1 Isotope Effects	421		
8.1.1 The Experiment	422		
8.1.2 The Origin of Primary Kinetic Isotope Effects	422		
<i>Reaction Coordinate Diagrams and Isotope Effects</i>	424		
			<i>Primary Kinetic Isotope Effects for Linear Transition States as a Function of Exothermicity and Endothermicity</i> 425
			<i>Isotope Effects for Linear vs. Non-Linear Transition States</i> 428
8.1.3 The Origin of Secondary Kinetic Isotope Effects	428		
<i>Hybridization Changes</i>	429		
<i>Steric Isotope Effects</i>	430		
8.1.4 Equilibrium Isotope Effects	432		
<i>Isotopic Perturbation of Equilibrium—Applications to Carbocations</i>	432		
8.1.5 Tunneling	435		
8.1.6 Solvent Isotope Effects	437		
<i>Fractionation Factors</i>	437		
<i>Proton Inventories</i>	438		
8.1.7 Heavy Atom Isotope Effects	441		
8.1.8 Summary	441		
8.2 Substituent Effects	441		
8.2.1 The Origin of Substituent Effects	443		
<i>Field Effects</i>	443		
<i>Inductive Effects</i>	443		
<i>Resonance Effects</i>	444		
<i>Polarizability Effects</i>	444		
<i>Steric Effects</i>	445		
<i>Solvation Effects</i>	445		
8.3 Hammett Plots—The Most Common LFER. A General Method for Examining Changes in Charges During a Reaction	445		
8.3.1 Sigma (σ)	445		
8.3.2 Rho (ρ)	447		
8.3.3 The Power of Hammett Plots for Deciphering Mechanisms	448		
8.3.4 Deviations from Linearity	449		
8.3.5 Separating Resonance from Induction	451		
8.4 Other Linear Free Energy Relationships	454		
8.4.1 Steric and Polar Effects—Taft Parameters	454		
8.4.2 Solvent Effects—Grunwald–Winstein Plots	455		
8.4.3 Schleyer Adaptation	457		
8.4.4 Nucleophilicity and Nucleofugality	458		
<i>Basicity/Acidity</i>	459		
<i>Solvation</i>	460		
<i>Polarizability, Basicity, and Solvation Interplay</i>	460		
<i>Shape</i>	461		
8.4.5 Swain–Scott Parameters—Nucleophilicity Parameters	461		
8.4.6 Edwards and Ritchie Correlations	463		
8.5 Acid–Base Related Effects—Brønsted Relationships	464		
8.5.1 β_{Nuc}	464		
8.5.2 β_{LG}	464		
8.5.3 Acid–Base Catalysis	466		
8.6 Why do Linear Free Energy Relationships Work?	466		
8.6.1 General Mathematics of LFERs	467		
8.6.2 Conditions to Create an LFER	468		
8.6.3 The Isokinetic or Isoequilibrium Temperature	469		

8.6.4 Why does Enthalpy–Entropy Compensation Occur?	469
<i>Steric Effects</i>	470
<i>Solvation</i>	470
8.7 Summary of Linear Free Energy Relationships	470
8.8 Miscellaneous Experiments for Studying Mechanisms	471
8.8.1 Product Identification	472
8.8.2 Changing the Reactant Structure to Divert or Trap a Proposed Intermediate	473
8.8.3 Trapping and Competition Experiments	474
8.8.4 Checking for a Common Intermediate	475
8.8.5 Cross-Over Experiments	476
8.8.6 Stereochemical Analysis	476
8.8.7 Isotope Scrambling	477
8.8.8 Techniques to Study Radicals: Clocks and Traps	478
8.8.9 Direct Isolation and Characterization of an Intermediate	480
8.8.10 Transient Spectroscopy	480
8.8.11 Stable Media	481
Summary and Outlook	482
EXERCISES	482
FURTHER READING	487

CHAPTER 9: Catalysis 489

Intent and Purpose 489

9.1 General Principles of Catalysis	490
9.1.1 Binding the Transition State <i>Better</i> than the Ground State	491
9.1.2 A Thermodynamic Cycle Analysis	493
9.1.3 A Spatial Temporal Approach	494
9.2 Forms of Catalysis	495
9.2.1 “Binding” is Akin to Solvation	495
9.2.2 Proximity as a Binding Phenomenon	495
9.2.3 Electrophilic Catalysis	499
<i>Electrostatic Interactions</i>	499
<i>Metal Ion Catalysis</i>	500
9.2.4 Acid–Base Catalysis	502
9.2.5 Nucleophilic Catalysis	502
9.2.6 Covalent Catalysis	504
9.2.7 Strain and Distortion	505
9.2.8 Phase Transfer Catalysis	507
9.3 Brønsted Acid–Base Catalysis	507
9.3.1 Specific Catalysis	507
<i>The Mathematics of Specific Catalysis</i>	507
<i>Kinetic Plots</i>	510
9.3.2 General Catalysis	510
<i>The Mathematics of General Catalysis</i>	511
<i>Kinetic Plots</i>	512
9.3.3 A Kinetic Equivalency	514

9.3.4 Concerted or Sequential General-Acid–General-Base Catalysis	515
9.3.5 The Brønsted Catalysis Law and Its Ramifications	516
<i>A Linear Free Energy Relationship</i>	516
<i>The Meaning of α and β</i>	517
$\alpha + \beta = 1$	518
<i>Deviations from Linearity</i>	519
9.3.6 Predicting General-Acid or General-Base Catalysis	520
<i>The Libido Rule</i>	520
<i>Potential Energy Surfaces Dictate General or Specific Catalysis</i>	521
9.3.7 The Dynamics of Proton Transfers	522
<i>Marcus Analysis</i>	522
9.4 Enzymatic Catalysis	523
9.4.1 Michaelis–Menten Kinetics	523
9.4.2 The Meaning of K_M , k_{cat} , and k_{cat}/K_M	524
9.4.3 Enzyme Active Sites	525
9.4.4 $[S]$ vs. K_M —Reaction Coordinate Diagrams	527
9.4.5 Supramolecular Interactions	529
Summary and Outlook	530
EXERCISES	531
FURTHER READING	535

CHAPTER 10: Organic Reaction Mechanisms, Part 1: Reactions Involving Additions and/or Eliminations 537

Intent and Purpose 537

10.1 Predicting Organic Reactivity	538
10.1.1 A Useful Paradigm for Polar Reactions	539
<i>Nucleophiles and Electrophiles</i>	539
<i>Lewis Acids and Lewis Bases</i>	540
<i>Donor–Acceptor Orbital Interactions</i>	540
10.1.2 Predicting Radical Reactivity	541
10.1.3 In Preparation for the Following Sections	541
—ADDITION REACTIONS—	542
10.2 Hydration of Carbonyl Structures	542
10.2.1 Acid–Base Catalysis	543
10.2.2 The Thermodynamics of the Formation of Geminal Diols and Hemiacetals	544
10.3 Electrophilic Addition of Water to Alkenes and Alkynes: Hydration	545
10.3.1 Electron Pushing	546
10.3.2 Acid-Catalyzed Aqueous Hydration	546
10.3.3 Regiochemistry	546
10.3.4 Alkyne Hydration	547
10.4 Electrophilic Addition of Hydrogen Halides to Alkenes and Alkynes	548
10.4.1 Electron Pushing	548

10.4.2 Experimental Observations Related to Regiochemistry and Stereochemistry	548
10.4.3 Addition to Alkynes	551
10.5 Electrophilic Addition of Halogens to Alkenes	551
10.5.1 Electron Pushing	551
10.5.2 Stereochemistry	552
10.5.3 Other Evidence Supporting a σ Complex	552
10.5.4 Mechanistic Variants	553
10.5.5 Addition to Alkynes	554
10.6 Hydroboration	554
10.6.1 Electron Pushing	555
10.6.2 Experimental Observations	555
10.7 Epoxidation	555
10.7.1 Electron Pushing	556
10.7.2 Experimental Observations	556
10.8 Nucleophilic Additions to Carbonyl Compounds	556
10.8.1 Electron Pushing for a Few Nucleophilic Additions	557
10.8.2 Experimental Observations for Cyanohydrin Formation	559
10.8.3 Experimental Observations for Grignard Reactions	560
10.8.4 Experimental Observations in LAH Reductions	561
10.8.5 Orbital Considerations	561
<i>The Bürgi–Dunitz Angle</i>	561
<i>Orbital Mixing</i>	562
10.8.6 Conformational Effects in Additions to Carbonyl Compounds	562
10.8.7 Stereochemistry of Nucleophilic Additions	563
10.9 Nucleophilic Additions to Olefins	567
10.9.1 Electron Pushing	567
10.9.2 Experimental Observations	567
10.9.3 Regiochemistry of Addition	567
10.9.4 Baldwin's Rules	568
10.10 Radical Additions to Unsaturated Systems	569
10.10.1 Electron Pushing for Radical Additions	569
10.10.2 Radical Initiators	570
10.10.3 Chain Transfer vs. Polymerization	571
10.10.4 Termination	571
10.10.5 Regiochemistry of Radical Additions	572
10.11 Carbene Additions and Insertions	572
10.11.1 Electron Pushing for Carbene Reactions	574
10.11.2 Carbene Generation	574
10.11.3 Experimental Observations for Carbene Reactions	575
—ELIMINATIONS—	576
10.12 Eliminations to Form Carbonyls or "Carbonyl-Like" Intermediates	577
10.12.1 Electron Pushing	577
10.12.2 Stereochemical and Isotope Labeling Evidence	577
10.12.3 Catalysis of the Hydrolysis of Acetals	578
10.12.4 Stereoelectronic Effects	579
10.12.5 CrO_3 Oxidation—The Jones Reagent	580
<i>Electron Pushing</i>	580
<i>A Few Experimental Observations</i>	581
10.13 Elimination Reactions for Aliphatic Systems— Formation of Alkenes	581
10.13.1 Electron Pushing and Definitions	581
10.13.2 Some Experimental Observations for E2 and E1 Reactions	582
10.13.3 Contrasting Elimination and Substitution	583
10.13.4 Another Possibility—E1cB	584
10.13.5 Kinetics and Experimental Observations for E1cB	584
10.13.6 Contrasting E2, E1, and E1cB	586
10.13.7 Regiochemistry of Eliminations	588
10.13.8 Stereochemistry of Eliminations— Orbital Considerations	590
10.13.9 Dehydration	592
<i>Electron Pushing</i>	592
<i>Other Mechanistic Possibilities</i>	594
10.13.10 Thermal Eliminations	594
10.14 Eliminations from Radical Intermediates	596
—COMBINING ADDITION AND ELIMINATION REACTIONS (SUBSTITUTIONS AT sp^2 CENTERS)—	596
10.15 The Addition of Nitrogen Nucleophiles to Carbonyl Structures, Followed by Elimination	597
10.15.1 Electron Pushing	598
10.15.2 Acid–Base Catalysis	598
10.16 The Addition of Carbon Nucleophiles, Followed by Elimination— The Wittig Reaction	599
10.16.1 Electron Pushing	600
10.17 Acyl Transfers	600
10.17.1 General Electron-Pushing Schemes	600
10.17.2 Isotope Scrambling	601
10.17.3 Predicting the Site of Cleavage for Acyl Transfers from Esters	602
10.17.4 Catalysis	602
10.18 Electrophilic Aromatic Substitution	607
10.18.1 Electron Pushing for Electrophilic Aromatic Substitutions	607
10.18.2 Kinetics and Isotope Effects	608
10.18.3 Intermediate Complexes	608
10.18.4 Regiochemistry and Relative Rates of Aromatic Substitution	609
10.19 Nucleophilic Aromatic Substitution	611
10.19.1 Electron Pushing for Nucleophilic Aromatic Substitution	611
10.19.2 Experimental Observations	611

- 10.20 Reactions Involving Benzyne** 612
 10.20.1 Electron Pushing for Benzyne Reactions 612
 10.20.2 Experimental Observations 613
 10.20.3 Substituent Effects 613

- 10.21 The $S_{RN}1$ Reaction on Aromatic Rings** 615
 10.21.1 Electron Pushing 615
 10.21.2 A Few Experimental Observations 615

- 10.22 Radical Aromatic Substitutions** 615
 10.22.1 Electron Pushing 615
 10.22.2 Isotope Effects 616
 10.22.3 Regiochemistry 616

Summary and Outlook 617

EXERCISES 617

FURTHER READING 624

**CHAPTER 11: Organic Reaction Mechanisms,
 Part 2: Substitutions at Aliphatic
 Centers and Thermal Isomerizations/
 Rearrangements** 627

Intent and Purpose 627

—SUBSTITUTION α TO A CARBONYL CENTER:
 ENOL AND ENOLATE CHEMISTRY— 627

- 11.1 Tautomerization** 628
 11.1.1 Electron Pushing for Keto–Enol
 Tautomerizations 628
 11.1.2 The Thermodynamics of Enol Formation 628
 11.1.3 Catalysis of Enolizations 629
 11.1.4 Kinetic vs. Thermodynamic Control
 in Enolate and Enol Formation 629

- 11.2 α -Halogenation** 631
 11.2.1 Electron Pushing 631
 11.2.2 A Few Experimental Observations 631

- 11.3 α -Alkylations** 632
 11.3.1 Electron Pushing 632
 11.3.2 Stereochemistry: Conformational Effects 633

- 11.4 The Aldol Reaction** 634
 11.4.1 Electron Pushing 634
 11.4.2 Conformational Effects on the Aldol Reaction 634

—SUBSTITUTIONS ON ALIPHATIC CENTERS— 637

- 11.5 Nucleophilic Aliphatic Substitution Reactions** 637
 11.5.1 S_N2 and S_N1 Electron-Pushing Examples 637
 11.5.2 Kinetics 638
 11.5.3 Competition Experiments and Product Analyses 639
 11.5.4 Stereochemistry 640
 11.5.5 Orbital Considerations 643
 11.5.6 Solvent Effects 643
 11.5.7 Isotope Effect Data 646
 11.5.8 An Overall Picture of S_N2 and S_N1 Reactions 646

- 11.5.9 Structure–Function Correlations
 with the Nucleophile 648
 11.5.10 Structure–Function Correlations
 with the Leaving Group 651
 11.5.11 Structure–Function Correlations
 with the R Group 651
Effect of the R Group Structure on S_N2 Reactions 651
Effect of the R Group Structure on S_N1 Reactions 653
 11.5.12 Carbocation Rearrangements 656
 11.5.13 Anchimeric Assistance in S_N1 Reactions 659
 11.5.14 S_N1 Reactions Involving Non-Classical
 Carbocations 661
Norbornyl Cation 662
Cyclopropyl Carbinyl Carbocation 664
 11.5.15 Summary of Carbocation Stabilization
 in Various Reactions 667
 11.5.16 The Interplay Between Substitution
 and Elimination 667

- 11.6 Substitution, Radical, Nucleophilic** 668
 11.6.1 The SET Reaction—Electron Pushing 668
 11.6.2 The Nature of the Intermediate
 in an SET Mechanism 669
 11.6.3 Radical Rearrangements as Evidence 669
 11.6.4 Structure–Function Correlations
 with the Leaving Group 670
 11.6.5 The $S_{RN}1$ Reaction—Electron Pushing 670

11.7 Radical Aliphatic Substitutions 671

- 11.7.1 Electron Pushing 671
 11.7.2 Heats of Reaction 671
 11.7.3 Regiochemistry of Free Radical
 Halogenation 671
 11.7.4 Autoxidation: Addition of O_2
 into C–H Bonds 673
Electron Pushing for Autoxidation 673

—ISOMERIZATIONS AND REARRANGEMENTS— 674

- 11.8 Migrations to Electrophilic Carbons** 674
 11.8.1 Electron Pushing for the
 Pinacol Rearrangement 675
 11.8.2 Electron Pushing in the Benzilic Acid
 Rearrangement 675
 11.8.3 Migratory Aptitudes in the Pinacol
 Rearrangement 675
 11.8.4 Stereoelectronic and Stereochemical Considerations
 in the Pinacol Rearrangement 676
 11.8.5 A Few Experimental Observations for the Benzilic
 Acid Rearrangement 678

11.9 Migrations to Electrophilic Heteroatoms 678

- 11.9.1 Electron Pushing in the Beckmann
 Rearrangement 678
 11.9.2 Electron Pushing for the Hofmann
 Rearrangement 679
 11.9.3 Electron Pushing for the Schmidt
 Rearrangement 680
 11.9.4 Electron Pushing for the Baeyer–Villiger
 Oxidation 680
 11.9.5 A Few Experimental Observations for the
 Beckmann Rearrangement 680

- 11.9.6 A Few Experimental Observations for the Schmidt Rearrangement 681
 11.9.7 A Few Experimental Observations for the Baeyer–Villiger Oxidation 681

11.10 The Favorskii Rearrangement and Other Carbanion Rearrangements 682

- 11.10.1 Electron Pushing 682
 11.10.2 Other Carbanion Rearrangements 683

11.11 Rearrangements Involving Radicals 683

- 11.11.1 Hydrogen Shifts 683
 11.11.2 Aryl and Vinyl Shifts 684
 11.11.3 Ring-Opening Reactions 685

11.12 Rearrangements and Isomerizations Involving Biradicals 685

- 11.12.1 Electron Pushing Involving Biradicals 686
 11.12.2 Tetramethylene 687
 11.12.3 Trimethylene 689
 11.12.4 Trimethylenemethane 693

Summary and Outlook 695

EXERCISES 695

FURTHER READING 703

CHAPTER 12: Organotransition Metal Reaction Mechanisms and Catalysis 705

Intent and Purpose 705

12.1 The Basics of Organometallic Complexes 705

- 12.1.1 Electron Counting and Oxidation State 706
 Electron Counting 706
 Oxidation State 708
 d Electron Count 708
 Ambiguities 708
 12.1.2 The 18-Electron Rule 710
 12.1.3 Standard Geometries 710
 12.1.4 Terminology 711
 12.1.5 Electron Pushing with Organometallic Structures 711
 12.1.6 *d* Orbital Splitting Patterns 712
 12.1.7 Stabilizing Reactive Ligands 713

12.2 Common Organometallic Reactions 714

- 12.2.1 Ligand Exchange Reactions 714
 Reaction Types 714
 Kinetics 716
 Structure–Function Relationships with the Metal 716
 Structure–Function Relationships with the Ligand 716
 Substitutions of Other Ligands 717
 12.2.2 Oxidative Addition 717
 Stereochemistry of the Metal Complex 718
 Kinetics 718
 Stereochemistry of the R Group 719
 Structure–Function Relationship for the R Group 720

Structure–Function Relationships for the Ligands 720
Oxidative Addition at sp^2 Centers 721
Summary of the Mechanisms for Oxidative Addition 721

- 12.2.3 Reductive Elimination 724
 Structure–Function Relationship for the R Group and the Ligands 724
 Stereochemistry at the Metal Center 725
 Other Mechanisms 725
 Summary of the Mechanisms for Reductive Elimination 726
 12.2.4 α - and β -Eliminations 727
 General Trends for α - and β -Eliminations 727
 Kinetics 728
 Stereochemistry of β -Hydride Elimination 729
 12.2.5 Migratory Insertions 729
 Kinetics 730
 Studies to Decipher the Mechanism of Migratory Insertion Involving CO 730
 Other Stereochemical Considerations 732
 12.2.6 Electrophilic Addition to Ligands 733
 Reaction Types 733
 Common Mechanisms Deduced from Stereochemical Analyses 734
 12.2.7 Nucleophilic Addition to Ligands 734
 Reaction Types 735
 Stereochemical and Regiochemical Analyses 735

12.3 Combining the Individual Reactions into Overall Transformations and Cycles 737

- 12.3.1 The Nature of Organometallic Catalysis—Change in Mechanism 738
 12.3.2 The Monsanto Acetic Acid Synthesis 738
 12.3.3 Hydroformylation 739
 12.3.4 The Water–Gas Shift Reaction 740
 12.3.5 Olefin Oxidation—The Wacker Process 741
 12.3.6 Palladium Coupling Reactions 742
 12.3.7 Allylic Alkylation 743
 12.3.8 Olefin Metathesis 744

Summary and Outlook 747

EXERCISES 748

FURTHER READING 750

CHAPTER 13: Organic Polymer and Materials Chemistry 753

Intent and Purpose 753

- 13.1 Structural Issues in Materials Chemistry 754
 13.1.1 Molecular Weight Analysis of Polymers 754
 Number Average and Weight Average Molecular Weights— M_n and M_w 754
 13.1.2 Thermal Transitions—Thermoplastics and Elastomers 757
 13.1.3 Basic Polymer Topologies 759

13.1.4 Polymer–Polymer Phase Behavior	760
13.1.5 Polymer Processing	762
13.1.6 Novel Topologies—Dendrimers and Hyperbranched Polymers	763
Dendrimers	763
Hyperbranched Polymers	768
13.1.7 Liquid Crystals	769
13.1.8 Fullerenes and Carbon Nanotubes	775
13.2 Common Polymerization Mechanisms	779
13.2.1 General Issues	779
13.2.2 Polymerization Kinetics	782
Step-Growth Kinetics	782
Free-Radical Chain Polymerization	783
Living Polymerizations	785
Thermodynamics of Polymerizations	787
13.2.3 Condensation Polymerization	788
13.2.4 Radical Polymerization	791
13.2.5 Anionic Polymerization	793
13.2.6 Cationic Polymerization	794
13.2.7 Ziegler–Natta and Related Polymerizations	794
Single-Site Catalysts	796
13.2.8 Ring-Opening Polymerization	797
13.2.9 Group Transfer Polymerization (GTP)	799
Summary and Outlook	800
EXERCISES	801

PART III

ELECTRONIC STRUCTURE: THEORY AND APPLICATIONS

CHAPTER 14: Advanced Concepts in Electronic Structure Theory 807

Intent and Purpose 807

14.1 Introductory Quantum Mechanics	808
14.1.1 The Nature of Wavefunctions	808
14.1.2 The Schrödinger Equation	809
14.1.3 The Hamiltonian	809
14.1.4 The Nature of the ∇^2 Operator	811
14.1.5 Why do Bonds Form?	812
14.2 Computational Methods—Solving the Schrödinger Equation for Complex Systems	815
14.2.1 <i>Ab Initio</i> Molecular Orbital Theory	815
Born–Oppenheimer Approximation	815
The Orbital Approximation	815
Spin	816
The Pauli Principle and Determinantal Wavefunctions	816
The Hartree–Fock Equation and the Variational Theorem	818

SCF Theory	821
Linear Combination of Atomic Orbitals—Molecular Orbitals (LCAO–MO)	821
Common Basis Sets—Modeling Atomic Orbitals	822
Extension Beyond HF—Correlation Energy	824
Solvation	825
General Considerations	825
Summary	826

14.2.2 Secular Determinants—A Bridge Between <i>Ab Initio</i> , Semi-Empirical / Approximate, and Perturbational Molecular Orbital Theory Methods	828
The “Two-Orbital Mixing Problem”	829
Writing the Secular Equations and Determinant for Any Molecule	832
14.2.3 Semi-Empirical and Approximate Methods	833
Neglect of Differential Overlap (NDO) Methods	833
i. CNDO, INDO, PND0 (C = Complete, I = Intermediate, P = Partial)	834
ii. The Semi-Empirical Methods: MNDO, AM1, and PM3	834
Extended Hückel Theory (EHT)	834
Hückel Molecular Orbital Theory (HMOT)	835
14.2.4 Some General Comments on Computational Quantum Mechanics	835
14.2.5 An Alternative: Density Functional Theory (DFT)	836

14.3 A Brief Overview of the Implementation and Results of HMOT 837

14.3.1 Implementing Hückel Theory	838
14.3.2 HMOT of Cyclic π Systems	840
14.3.3 HMOT of Linear π Systems	841
14.3.4 Alternate Hydrocarbons	842

14.4 Perturbation Theory—Orbital Mixing Rules 844

14.4.1 Mixing of Degenerate Orbitals—First-Order Perturbations	845
14.4.2 Mixing of Non-Degenerate Orbitals—Second-Order Perturbations	845

14.5 Some Topics in Organic Chemistry for Which Molecular Orbital Theory Lends Important Insights 846

14.5.1 Arenes: Aromaticity and Antiaromaticity	846
14.5.2 Cyclopropane and Cyclopropylcarbinyl—Walsh Orbitals	848
The Cyclic Three-Orbital Mixing Problem	849
The MOs of Cyclopropane	850
14.5.3 Planar Methane	853
14.5.4 Through-Bond Coupling	854
14.5.5 Unique Bonding Capabilities of Carbocations—Non-Classical Ions and Hypervalent Carbon	855
Transition State Structure Calculations	856
Application of These Methods to Carbocations	857
NMR Effects in Carbocations	857
The Norbornyl Cation	858
14.5.6 Spin Preferences	859
Two Weakly Interacting Electrons: H_2 vs. Atomic C	859

- 14.6 Organometallic Complexes 862
 - 14.6.1 Group Orbitals for Metals 863
 - 14.6.2 The Isolobal Analogy 866
 - 14.6.3 Using the Group Orbitals to Construct Organometallic Complexes 867

Summary and Outlook 868

EXERCISES 868

FURTHER READING 875

CHAPTER 15: Thermal Pericyclic Reactions 877

Intent and Purpose 877

- 15.1 Background 878
- 15.2 A Detailed Analysis of Two Simple Cycloadditions 878
 - 15.2.1 Orbital Symmetry Diagrams 879
 - [2+2] 879
 - [4+2] 881
 - 15.2.2 State Correlation Diagrams 883
 - [2+2] 883
 - [4+2] 886
 - 15.2.3 Frontier Molecular Orbital (FMO) Theory 888
 - Contrasting the [2+2] and [4+2]* 888
 - 15.2.4 Aromatic Transition State Theory/Topology 889
 - 15.2.5 The Generalized Orbital Symmetry Rule 890
 - 15.2.6 Some Comments on "Forbidden" and "Allowed" Reactions 892
 - 15.2.7 Photochemical Pericyclic Reactions 892
 - 15.2.8 Summary of the Various Methods 893
- 15.3 Cycloadditions 893
 - 15.3.1 An Allowed Geometry for [2+2] Cycloadditions 894
 - 15.3.2 Summarizing Cycloadditions 895
 - 15.3.3 General Experimental Observations 895
 - 15.3.4 Stereochemistry and Regiochemistry of the Diels–Alder Reaction 896
 - An Orbital Approach to Predicting Regiochemistry* 896
 - The Endo Effect* 899
 - 15.3.5 Experimental Observations for [2+2] Cycloadditions 901
 - 15.3.6 Experimental Observations for 1,3-Dipolar Cycloadditions 901
 - 15.3.7 Retrocycloadditions 902
- 15.4 Electrocyclic Reactions 903
 - 15.4.1 Terminology 903
 - 15.4.2 Theoretical Analyses 904
 - 15.4.3 Experimental Observations: Stereochemistry 906
 - 15.4.4 Torquoselectivity 908

- 15.5 Sigmatropic Rearrangements 910
 - 15.5.1 Theory 911
 - 15.5.2 Experimental Observations: A Focus on Stereochemistry 913
 - 15.5.3 The Mechanism of the Cope Rearrangement 916
 - 15.5.4 The Claisen Rearrangement 921
 - Uses in Synthesis* 921
 - Mechanistic Studies* 923
 - 15.5.5 The Ene Reaction 924

15.6 Cheletropic Reactions 924

- 15.6.1 Theoretical Analyses 926
- 15.6.2 Carbene Additions 927

15.7 In Summary—Applying the Rules 928

Summary and Outlook 928

EXERCISES 929

FURTHER READING 933

CHAPTER 16: Photochemistry 935

Intent and Purpose 935

- 16.1 Photophysical Processes—The Jablonski Diagram 936
 - 16.1.1 Electromagnetic Radiation 936
 - Multiple Energy Surfaces Exist* 937
 - 16.1.2 Absorption 939
 - 16.1.3 Radiationless Vibrational Relaxation 944
 - 16.1.4 Fluorescence 945
 - 16.1.5 Internal Conversion (IC) 949
 - 16.1.6 Intersystem Crossing (ISC) 950
 - 16.1.7 Phosphorescence 951
 - 16.1.8 Quantum Yield 952
 - 16.1.9 Summary of Photophysical Processes 952
- 16.2 Bimolecular Photophysical Processes 953
 - 16.2.1 General Considerations 953
 - 16.2.2 Quenching, Excimers, and Exciplexes 953
 - Quenching* 954
 - Excimers and Exciplexes* 954
 - Photoinduced Electron Transfer* 955
 - 16.2.3 Energy Transfer I. The Dexter Mechanism—Sensitization 956
 - 16.2.4 Energy Transfer II. The Förster Mechanism 958
 - 16.2.5 FRET 960
 - 16.2.6 Energy Pooling 962
 - 16.2.7 An Overview of Bimolecular Photophysical Processes 962
- 16.3 Photochemical Reactions 962
 - 16.3.1 Theoretical Considerations—Funnels 962
 - Diabatic Photoreactions* 963
 - Other Mechanisms* 964
 - 16.3.2 Acid–Base Chemistry 965

- 16.3.3 Olefin Isomerization 965
- 16.3.4 Reversal of Pericyclic Selection Rules 968
- 16.3.5 Photocycloaddition Reactions 970
 - Making Highly Strained Ring Systems* 973
 - Breaking Aromaticity* 974
- 16.3.6 The Di- π -Methane Rearrangement 974
- 16.3.7 Carbonyls Part I: The Norrish I Reaction 976
- 16.3.8 Carbonyls Part II: Photoreduction and the Norrish II Reaction 978
- 16.3.9 Nitrobenzyl Photochemistry: "Caged" Compounds 980
- 16.3.10 Elimination of N_2 : Azo Compounds, Diazo Compounds, Diazirines, and Azides 981
 - Azoalkanes (1,2-Diazenes)* 981
 - Diazo Compounds and Diazirines* 982
 - Azides* 983

16.4 Chemiluminescence 985

- 16.4.1 Potential Energy Surface for a Chemiluminescent Reaction 985
- 16.4.2 Typical Chemiluminescent Reactions 986
- 16.4.3 Dioxetane Thermolysis 987

16.5 Singlet Oxygen 989

Summary and Outlook 993

EXERCISES 993

FURTHER READING 999

CHAPTER 17: Electronic Organic Materials 1001

Intent and Purpose 1001

17.1 Theory 1001

- 17.1.1 Infinite π Systems—An Introduction to Band Structures 1002
- 17.1.2 The Peierls Distortion 1009
- 17.1.3 Doping 1011

17.2 Conducting Polymers 1016

- 17.2.1 Conductivity 1016
- 17.2.2 Polyacetylene 1017
- 17.2.3 Polyarenes and Polyarenevinylenes 1018
- 17.2.4 Polyaniline 1021

17.3 Organic Magnetic Materials 1022

- 17.3.1 Magnetism 1023
- 17.3.2 The Molecular Approach to Organic Magnetic Materials 1024
- 17.3.3 The Polymer Approach to Organic Magnetic Materials—Very High-Spin Organic Molecules 1027

17.4 Superconductivity 1030

- 17.4.1 Organic Metals/Synthetic Metals 1032

17.5 Non-Linear Optics (NLO) 1033

17.6 Photoresists 1036

- 17.6.1 Photolithography 1036
- 17.6.2 Negative Photoresists 1037
- 17.6.3 Positive Photoresists 1038

Summary and Outlook 1041

EXERCISES 1042

FURTHER READING 1044

APPENDIX 1: Conversion Factors and Other Useful Data 1047

APPENDIX 2: Electrostatic Potential Surfaces for Representative Organic Molecules 1049

APPENDIX 3: Group Orbitals of Common Functional Groups: Representative Examples Using Simple Molecules 1051

APPENDIX 4: The Organic Structures of Biology 1057

APPENDIX 5: Pushing Electrons 1061

- A5.1 The Rudiments of Pushing Electrons 1061
- A5.2 Electron Sources and Sinks for Two-Electron Flow 1062
- A5.3 How to Denote Resonance 1064
- A5.4 Common Electron-Pushing Errors 1065
 - Backwards Arrow Pushing 1065
 - Not Enough Arrows 1065
 - Losing Track of the Octet Rule 1066
 - Losing Track of Hydrogens and Lone Pairs 1066
 - Not Using the Proper Source 1067
 - Mixed Media Mistakes 1067
 - Too Many Arrows—Short Cuts 1067
- A5.5 Complex Reactions—Drawing a Chemically Reasonable Mechanism 1068
- A5.6 Two Case Studies of Predicting Reaction Mechanisms 1069
- A5.7 Pushing Electrons for Radical Reactions 1071
 - Practice Problems for Pushing Electrons 1073
