der Vetsuisse-Fakultät Universität Zürich

Direktor: Prof. Dr. Roger Stephan

**Reduced host cell invasiveness and oxidative stress tolerance in double and
triple *csp* gene family deletion mutants of *L. monocytogenes***

Inaugural-Dissertation

zur Erlangung der Doktorwürde der
Vetsuisse-Fakultät Universität Zürich

vorgelegt von

Chantal Loepfe

Tierärztin
von Häggenschwil SG, Schweiz

genehmigt auf Antrag von

Prof. Dr. Roger Stephan, Referent

PD Dr. Ludwig E. Hoelzle, Korreferent

Zürich 2010

CONTENTS

1.	Summary	page	3
2.	Introduction	page	4
3.	Material and Methods	page	6
3.1.	Bacterial strains and cell lines		
3.2.	Quantification of <i>Listeria</i> organisms by colony counting		
3.3.	<i>Listeria</i> inocula		
3.4.	Caco-2 cell invasion and adhesion assays		
3.5.	Macrophage invasion assay		
3.6.	Oxidative stress exposure assays		
3.7.	Statistical analysis		
4.	Results	page	10
4.1.	The cell invasion abilities of $\Delta cspBD$ and $\Delta cspABD$ strains are severely impaired		
4.2.	Cold stress exposure significantly impairs <i>L. monocytogenes</i> host cell invasion		
4.3.	The $\Delta cspBD$ and $\Delta cspABD$ strains are not significantly impaired in adherence to the Caco-2 cell surfaces		
4.4.	The $\Delta cspABD$ mutant displays impaired intramacrophage growth ability		
4.5.	The $\Delta cspBD$ and $\Delta cspABD$ strains are impaired in oxidative stress tolerance		
5.	Discussion	page	13
6.	References	page	18
7.	Table	page	21
8.	Figures	page	22
9.	Acknowledgements	page	29
