Brief Contents

Physiology of Exercise 1

- 1 Physiology of Exercise in the United States—Its Past, Its Future 2
- 2 Control of the Internal Environment 13
- 3 Bioenergetics 22
- 4 Exercise Metabolism 50
- 5 Hormonal Responses to Exercise 72
- 6 Measurement of Work, Power, and Energy Expenditure 106
- 7 The Nervous System: Structure and Control of Movement 120
- 8 Skeletal Muscle: Structure and Function 143
- 9 Circulatory Responses to Exercise 169
- 10 Respiration During Exercise 199
- 11 Acid-Base Balance During Exercise 230
- 12 Temperature Regulation 241
- 13 The Physiology of Training: Effect on $\dot{V}O_2$ Max, Performance, Homeostasis, and Strength 261

Physiology of Health and Fitness 289

- 14 Patterns in Health and Disease: Epidemiology and Physiology 290
- 15 Work Tests to Evaluate Cardiorespiratory Fitness 303
- 16 Exercise Prescriptions for Health and Fitness 325
- 17 Exercise for Special Populations 343
- 18 Body Composition and Nutrition for Health 367

Physiology of Performance 415

- 19 Factors Affecting Performance 416
- 20 Laboratory Assessment of Human Performance 430
- 21 Training for Performance 450
- 22 Training for the Female Athlete, Children, and Special Populations 473
- 23 Nutrition, Body Composition, and Performance 486
- 24 Exercise and the Environment 509
- 25 Ergogenic Aids 534

Contents

Preface xiii

Physiology of Exercise 1

Chapter 1 Physiology of Exercise in the United States—Its Past, Its Future	2
European Heritage	3
Harvard Fatigue Laboratory	3
Physical Fitness	5
Physical Education to Exercise Science	7
Graduate Study and Research in the Physiology of Exercise	7
Professional Societies and Research Journals	9
Translation of Exercise Physiology to the Consumer	10

Chapter 2 Control of the Internal Environment 13

Homeostasis: Dynamic Constancy	14
Control Systems of the Body	16
Nature of the Control Systems	16
Negative Feedback	17
Positive Feedback	17
Gain of a Control System	17
Examples of Homeostatic Control	18
Regulation of Body Temperature	18
Regulation of Blood Glucose	18
Stress Proteins Assist in the Regulation of Cellular Homeostasis	19
Exercise: A Test of Homeostatic Control	20

Chapter 3 Bioenergetics 22

Cell Structure	23
Biological Energy Transformation	24
Cellular Chemical Reactions	24
Oxidation-Reduction Reactions	26
Enzymes	27

Fuels for Exercise 30

Carbohydrates	30
Fats	31
Proteins	31
High-Energy Phosphates	31
Bioenergetics	32
Anaerobic ATP Production	33
Aerobic ATP Production	37
Aerobic ATP Tally	44
Efficiency of Oxidative Phosphorylation	44
Control of Bioenergetics	45
Control of ATP-PC System	45
Control of Glycolysis	45
Control of Krebs Cycle and Electron Transport Chain	46
Interaction Between Aerobic/Anaerobic ATP Production	46

Chapter 4 Exercise Metabolism 50

Energy Requirements at Rest	51
Rest-to-Exercise Transitions	51
Recovery from Exercise: Metabolic Responses	53
Metabolic Responses to Exercise: Influence of Duration and Intensity	55
Short-Term, Intense Exercise	55
Prolonged Exercise	56
Incremental Exercise	56
Estimation of Fuel Utilization During Exercise	59
Factors Governing Fuel Selection	60
Exercise Intensity and Fuel Selection	61
Exercise Duration and Fuel Selection	62
Interaction of Fat/Carbohydrate Metabolism	63
Body Fuel Sources	64

Chapter 5 Hormonal Responses to Exercise 72

Neuroendocrinology	73
Blood Hormone Concentration	74
Hormone-Receptor Interaction	75

Hormones: Regulation and Action	78
Hypothalamus and the Pituitary Gland	78
Thyroid Gland	79
Parathyroid Gland	81
Adrenal Gland	81
Pancreas	85
Testes and Ovaries	85
Hormonal Control of Substrate Mobilization	
During Exercise	89
Muscle-Glycogen Utilization	89
Blood Glucose Homeostasis	
During Exercise	93
Hormone-Substrate Interaction	100

Chapter 6 Measurement of Work, Power, and Energy Expenditure 106

Units of Measure	107
Metric System	107
SI Units	107
Work and Power Defined	107
Work	107
Power	108
Measurement of Work and Power	108
Bench Step	108
Cycle Ergometer	109
Treadmill	110
Measurement of Energy Expenditure	111
Direct Calorimetry	111
Indirect Calorimetry	112
Estimation of Energy Expenditure	113
Calculation of Exercise Efficiency	115
Factors that Influence Exercise	
Efficiency	115
Running Economy	117

Chapter 7 The Nervous System: Structure and Control of Movement 120

General Nervous System Functions	121
Organization of the Nervous System	121
Structure of the Neuron	121
Electrical Activity in Neurons	122
Sensory Information and Reflexes	129
Joint Proprioceptors	129
Muscle Proprioceptors	130
Muscle Chemoreceptors	131
Reflexes	131
Somatic Motor Function	133
Vestibular Apparatus and Equilibrium	133
Motor Control Functions of the Brain	135
Brain Stem	135
Cerebrum	135
Cerebellum	136
Motor Functions of the Spinal Cord	136
Control of Motor Functions	137
Autonomic Nervous System	138
Exercise Enhances Brain Health	139

Chapter 8 Skeletal Muscle: Structure and Function 143

Structure of Skeletal Muscle	144
Neuromuscular Junction	147
Muscular Contraction	147
Overview of the Sliding Filament Model	148
Energy for Contraction	148
Regulation of Excitation-Contraction Coupling	148
Fiber Types	154
Biochemical and Contractile Characteristics of Skeletal Muscle	155
Characteristics of Individual Fiber Types	155
Fiber Types and Performance	156
Alterations in Skeletal Muscle Due to Exercise, Inactivity, and Aging	157
Exercise-Induced Changes in Skeletal Muscles	157
Muscle Atrophy Due to Inactivity	158
Age-Related Changes in Skeletal Muscle	159
Muscle Actions	160
Speed of Muscle Action and Relaxation	161
Force Regulation in Muscle	162
Force-Velocity/Power-Velocity Relationships	162

Chapter 9 Circulatory Responses to Exercise 169

Organization of the Circulatory System	170
Structure of the Heart	170
Pulmonary and Systemic Circuits	171
Heart: Myocardium and Cardiac Cycle	171
Myocardium	172
Cardiac Cycle	173
Arterial Blood Pressure	176
Factors That Influence Arterial Blood Pressure	178
Electrical Activity of the Heart	178
Cardiac Output	182
Regulation of Heart Rate	182
Regulation of Stroke Volume	184
Hemodynamics	186
Physical Characteristics of Blood	186
Relationships Among Pressure, Resistance, and Flow	186
Sources of Vascular Resistance	187
Changes in Oxygen Delivery to Muscle During Exercise	188
Changes in Cardiac Output During Exercise	188
Changes in Arterial-Mixed Venous O ₂ Content During Exercise	189
Redistribution of Blood Flow During Exercise	189
Regulation of Local Blood Flow During Exercise	190
Circulatory Responses to Exercise	191
Emotional Influence	192
Transition from Rest to Exercise	192
Recovery from Exercise	192
Incremental Exercise	192

Arm Versus Leg Exercise 193

Intermittent Exercise 194

Prolonged Exercise 194

Regulation of Cardiovascular Adjustments to Exercise 194

Chapter 10 Respiration During Exercise 199

Function of the Lung 200

Structure of the Respiratory System 200

Conducting Zone 201

Respiratory Zone 202

Mechanics of Breathing 203

Inspiration 203

Expiration 204

Airway Resistance 204

Pulmonary Ventilation 206

Pulmonary Volumes and Capacities 206

Diffusion of Gases 208

Blood Flow to the Lung 209

Ventilation-Perfusion Relationships 211

O₂ and CO₂ Transport in Blood 212

Hemoglobin and O₂ Transport 212

Oxyhemoglobin Dissociation Curve 213

O₂ Transport in Muscle 215

CO₂ Transport in Blood 215

Ventilation and Acid-Base Balance 216

Ventilatory and Blood-Gas Responses to Exercise 217

Rest-to-Work Transitions 217

Prolonged Exercise in a Hot Environment 217

Incremental Exercise 217

Control of Ventilation 219

Ventilatory Regulation at Rest 219

Respiratory Control Center 219

Ventilatory Control During

Submaximal Exercise 222

Ventilatory Control During Heavy Exercise 222

Do the Lungs Adapt to Exercise Training? 224

Does the Pulmonary System Limit Maximal Exercise Performance? 224

Chapter 11 Acid-Base Balance During

Exercise 230

Acids, Bases, and pH 231

Hydrogen Ion Production During Exercise 232

Importance of Acid-Base Regulation

During Exercise 234

Acid-Base Buffer Systems 234

Intracellular Buffers 234

Extracellular Buffers 234

Respiratory Influence on Acid-Base

Balance 236

Regulation of Acid-Base Balance via the

Kidneys 237

Regulation of Acid-Base Balance During

Exercise 237

Chapter 12 Temperature Regulation 241

Overview of Heat Balance During Exercise 242

Temperature Measurement

During Exercise 243

Overview of Heat Production/Heat Loss 244

Heat Production 244

Heat Loss 244

Heat Storage in the Body During Exercise 247

Body's Thermostat—Hypothalamus 248

Shift in the Hypothalamic Thermostat Set Point

Due to Fever 248

Thermal Events During Exercise 249

Heat Index—A Measure of How Hot It

Feels 251

Exercise in the Heat 251

Sweat Rates During Exercise 251

Exercise Performance in a Hot Environment 251

Gender and Age Differences in

Thermoregulation 254

Heat Acclimatization 256

Loss of Acclimatization 257

Exercise in a Cold Environment 257

Cold Acclimatization 258

Chapter 13 The Physiology of Training: Effect on $\dot{V}O_2$ Max, Performance, Homeostasis, and Strength 261

Principles of Training 262

Overload 263

Specificity 263

Research Designs to Study Training 263

Endurance Training and $\dot{V}O_2$ Max 264

Training Programs and Changes in $\dot{V}O_2$ Max 264

$\dot{V}O_2$ Max: Cardiac Output and the Arteriovenous O₂ Difference 265

Stroke Volume 267

Arteriovenous O₂ Difference 268

Detraining and $\dot{V}O_2$ Max 269

Endurance Training: Effects on Performance and Homeostasis 270

Biochemical Adaptations and the Oxygen

Deficit 272

Biochemical Adaptations and the Plasma Glucose

Concentration 273

Biochemical Adaptations and Blood pH 274

Biochemical Adaptations and Lactate

Removal 277

Endurance Training: Links Between Muscle and Systemic Physiology 277

Peripheral Feedback 279

Central Command 279

Physiological Effects of Strength Training 280

Physiological Mechanisms Causing Increased Strength 281

Neural Factors 281

Muscular Enlargement 282

Concurrent Strength and Endurance Training 283

**Physiology of Health
and Fitness 289**

Chapter 14 Patterns in Health and Disease:

- Epidemiology and Physiology 290
- Epidemiology 291
- Coronary Heart Disease 294
 - Physical Inactivity as a Risk Factor 296
- Physiology 297
- Synthesis 299

Chapter 15 Work Tests to Evaluate

- Cardiorespiratory Fitness 303
- Testing Procedures 304
 - Screening 304
 - Resting and Exercise Measures 306
- Field Tests for Estimating CRF 306
 - Maximal Run Tests 306
 - Walk Tests 308
 - Canadian Home Fitness Test 308
- Graded Exercise Tests: Measurements 309
 - Heart Rate 309
 - Blood Pressure 310
 - ECG 310
 - Rating of Perceived Exertion 310
 - Termination Criteria 311
- $\dot{V}O_2$ Max 312
 - Estimation of $\dot{V}O_2$ Max from Last Work Rate 313
 - Estimation of $\dot{V}O_2$ Max from Submaximal HR Response 314
- Graded Exercise Test: Protocols 315
 - Treadmill 316
 - Cycle Ergometer 317
 - Step Test 319

**Chapter 16 Exercise Prescriptions for Health
and Fitness 325**

- Prescription of Exercise 326
 - Dose-Response 327
 - Physical Activity and Health 328
- General Guidelines for Improving Fitness 329
 - Screening 330
 - Progression 331
 - Warm-Up, Stretch, and Cool-Down, Stretch 331
- Exercise Prescription for CRF 331
 - Frequency 331
 - Duration 331
 - Intensity 332
- Sequence of Physical Activity 335
 - Walking 335
 - Jogging 335
 - Games and Sports 336
- Strength and Flexibility Training 337
- Environmental Concerns 337

Chapter 17 Exercise for Special

- Populations 343
- Diabetes 344
 - Exercise and the Diabetic 345
- Asthma 348
 - Diagnosis and Causes 348
 - Prevention/Relief of Asthma 349
 - Exercise-Induced Asthma 350
- Chronic Obstructive Pulmonary Disease 351
 - Testing and Training 352
- Hypertension 353
- Cardiac Rehabilitation 354
 - Population 354
 - Testing 355
 - Exercise Programs 355
- Exercise for Older Adults 356
- Exercise During Pregnancy 358

Chapter 18 Body Composition and

- Nutrition for Health 367
- Nutritional Goals 368
- Standards of Nutrition 370
- Classes of Nutrients 371
 - Water 371
 - Vitamins 371
 - Minerals 372
 - Carbohydrates 376
 - Fats 377
 - Protein 381
- Meeting the Guidelines and Achieving the Goals 382
 - Food Group Plans 382
 - Evaluating the Diet 383
- Body Composition 384
 - Methods of Assessing
 - Overweight and Obesity 384
 - Methods of Measuring Body Composition 385
 - Two-Component System of Body Composition 387
 - Body Fatness for Health and Fitness 390
- Obesity and Weight Control 391
 - Obesity 391
- Diet, Exercise, and Weight Control 396
 - Energy and Nutrient Balance 396
 - Diet and Weight Control 397
 - Energy Expenditure and Weight Control 398

Physiology of Performance 415

Chapter 19 Factors Affecting Performance 416

- Sites of Fatigue 417
 - Central Fatigue 417
 - Peripheral Fatigue 419
- Factors Limiting All-Out Anaerobic Performances 421

Ultra Short-Term Performances (Less than Ten Seconds)	421	Long, Slow-Distance Exercise	454
Short-Term Performances (10 to 180 Seconds)	422	High-Intensity, Continuous Exercise	455
Factors Limiting All-Out Aerobic Performances	423	Altitude Training Improves Exercise Performance at Sea Level	455
Moderate-Length Performances (Three to Twenty Minutes)	423	Injuries and Endurance Training	456
Intermediate-Length Performances (Twenty-One to Sixty Minutes)	424	Training to Improve Anaerobic Power	457
Long-Term Performances (One to Four Hours)	425	Training to Improve the ATP-PC System	457
Athlete as Machine	427	Training to Improve the Glycolytic System	457
Chapter 20 Laboratory Assessment of Human Performance	430	Training to Improve Muscular Strength	458
Laboratory Assessment of Physical Performance	431	Progressive Resistance Exercise	459
Physiological Testing: Theory and Ethics	431	General Strength-Training Principles	459
What the Athlete Gains by Physiological Testing	431	Free Weights Versus Machines	460
What Physiological Testing Will Not Do	432	Combined Strength- and Endurance-Training Programs	460
Components of Effective Physiological Testing	432	Gender Differences in Response to Strength Training	461
Direct Testing of Maximal Aerobic Power	433	Muscle Soreness	462
Specificity of Testing	433	Training to Improve Flexibility	463
Exercise Test Protocol	433	Year-Round Conditioning for Athletes	466
Determination of Peak $\dot{V}O_2$ in Paraplegic Athletes	435	Off-Season Conditioning	466
Laboratory Tests to Predict Endurance Performance	435	Preseason Conditioning	466
Use of the Lactate Threshold to Evaluate Performance	435	In-Season Conditioning	466
Measurement of Critical Power	437	Common Training Mistakes	467
Tests to Determine Exercise Economy	438	Chapter 22 Training for the Female Athlete, Children, and Special Populations	473
Estimating Success in Distance Running Using the Lactate Threshold and Running Economy	438	Factors Important to Women Involved in Vigorous Training	474
Determination of Anaerobic Power	440	Exercise and Menstrual Disorders	474
Tests of Ultra Short-Term Maximal Anaerobic Power	440	Training and Menstruation	475
Tests of Short-Term Anaerobic Power	442	The Female Athlete and Eating Disorders	475
Evaluation of Muscular Strength	443	Bone Mineral Disorders and the Female Athlete	476
Criteria for Selection of a Strength-Testing Method	443	Exercise During Pregnancy	476
Isometric Measurement of Strength	444	Risk of Knee Injury in Female Athletes	478
Free-Weight Testing of Strength	444	Sports Conditioning for Children	479
Isokinetic Assessment of Strength	445	Training and the Cardiopulmonary System	479
Variable-Resistance Measurement of Strength	446	Training and the Musculoskeletal System	480
Chapter 21 Training for Performance	450	Progress in Pediatric Exercise Science	480
Training Principles	451	Competitive Training for Diabetics	481
Overload, Specificity, and Reversibility	452	Training for Asthmatics	482
Influence of Gender and Initial Fitness Level	452	Epilepsy and Physical Training	482
Influence of Genetics	452	Does Exercise Promote Seizures?	482
Components of a Training Session: Warm-Up, Workout, and Cool Down	453	Risk of Injury Due to Seizures	483
Training to Improve Aerobic Power	453	Chapter 23 Nutrition, Body Composition, and Performance	486
Interval Training	453	Nutrition and Performance	487
		Carbohydrate	487
		Protein	492
		Water and Electrolytes	495
		Minerals	499
		Vitamins	500
		Precompetition Diet	501
		Body Composition and Performance	502
		Somatotype	502
		Body Fatness and Performance	503

Chapter 24 Exercise and the Environment 509

- Altitude 510**
 - Atmospheric Pressure 510
 - Short-Term Anaerobic Performance 510
 - Long-Term Aerobic Performance 511
 - Maximal Aerobic Power and Altitude 511
 - Adaptation to High Altitude 513
 - Training for Competition at Altitude 514
 - The Quest for Everest 516

- Heat 519**
 - Hyperthermia 519

- Cold 522**
 - Environmental Factors 523
 - Insulating Factors 525
 - Heat Production 526
 - Descriptive Characteristics 526
 - Dealing with Hypothermia 527

- Air Pollution 528**
 - Particulate Matter 528
 - Ozone 528
 - Sulfur Dioxide 528
 - Carbon Monoxide 528

Chapter 25 Ergogenic Aids 534

- Research Design Concerns 535**
- Dietary Supplements 536**
- Aerobic Performance 536**
 - Oxygen 536
 - Blood Doping 540
- Anaerobic Performance 542**
 - Blood Buffers 542

- Drugs 543**
 - Amphetamines 543
 - Caffeine 544
 - Nicotine 547
- Physical Warm-Up 548**

Appendixes

- Appendix A: Calculation of Oxygen Uptake and Carbon Dioxide Production A-1**
- Appendix B: Estimated Energy Expenditure During Selected Activities A-5**
- Appendix C: Physical Activity Prescriptions A-17**
- Appendix D: Dietary Reference Intakes: Macronutrients A-18**
- Appendix E: Dietary Reference Intakes: Vitamins and Minerals A-20**
- Appendix F: Dietary Reference Intakes: Estimated Energy Requirements A-24**
- Appendix G: Percent Fat Estimate for Men: Sum of Triceps, Chest, and Subscapula Skinfolde A-25**
- Appendix H: Percent Fat Estimate for Women: Sum of Triceps, Abdomen, and Suprailium Skinfolde A-26**

- Glossary G-1**
- Credits C-1**
- Index I-1**
