

Convexity

An Analytic Viewpoint

BARRY SIMON

California Institute of Technology

CAMBRIDGE
UNIVERSITY PRESS

Contents

	<i>Preface</i>	page vii
1	Convex functions and sets	1
2	Orlicz spaces	33
3	Gauges and locally convex spaces	51
4	Separation theorems	66
5	Duality: dual topologies, bipolar sets, and Legendre transforms	70
6	Monotone and convex matrix functions	87
7	Loewner's theorem: a first proof	114
8	Extreme points and the Krein–Milman theorem	120
9	The Strong Krein–Milman theorem	136
10	Choquet theory: existence	163
11	Choquet theory: uniqueness	171
12	Complex interpolation	185
13	The Brunn–Minkowski inequalities and log concave functions	194
14	Rearrangement inequalities, I. Brascamp–Lieb–Luttinger inequalities	208
15	Rearrangement inequalities, II. Majorization	231
16	The relative entropy	278
17	Notes	287
	<i>References</i>	321
	<i>Author index</i>	339
	<i>Subject index</i>	343
