

# Human Physiology

FIFTH EDITION

**Gillian Pocock**

Senior Lecturer in Clinical Science, Canterbury Christ Church University, Canterbury, UK

**Christopher D. Richards**

Emeritus Professor of Experimental Physiology, Division of Physiology, Pharmacology and Neuroscience, Faculty of Life Sciences, University College London, London, UK

and

**David A. Richards**

Associate Professor, Department of Basic Pharmaceutical Sciences, Husson University School of Pharmacy, Bangor, Maine, USA

**OXFORD**  
UNIVERSITY PRESS

# Contents

About the authors xv

A note to the reader xvi

## PART ONE

### Basic concepts in physiology 1

- 1 What is physiology? 3
  - 1.1 Introduction 3
  - 1.2 The organization of the body 3
  - 1.3 Terms used in anatomical descriptions 4
  - 1.4 The principal organ systems 6
  - 1.5 Homeostasis 9
- 2 Key concepts in chemistry 14
  - 2.1 Introduction 14
  - 2.2 Molecules are specific combinations of atoms 16
  - 2.3 Water and solutions 19
- 3 The chemical constitution of the body 27
  - 3.1 Introduction 27
  - 3.2 Body water 28
  - 3.3 The carbohydrates 29
  - 3.4 The lipids 30
  - 3.5 The amino acids and proteins 33
  - 3.6 The nucleosides, nucleotides, and nucleic acids 36

## PART TWO

### The organization and basic functions of cells 45

- 4 Introducing cells and tissues 47
  - 4.1 Introduction 47
  - 4.2 The structure and functions of the cellular organelles 48
  - 4.3 Cell motility 53
  - 4.4 Cell division 54
  - 4.5 Epithelia 58
  - 4.6 Energy metabolism in cells 60

- 5 The transport functions of the plasma membrane 66
  - 5.1 Introduction 66
  - 5.2 The permeability of cell membranes to ions and uncharged molecules 67
  - 5.3 The active transport of ions and other molecules across cell membranes 69
  - 5.4 The potassium gradient determines the resting membrane potential of cells 73
  - 5.5 Secretion, exocytosis, and endocytosis 76
- 6 Principles of cell signalling 83
  - 6.1 Introduction 83
  - 6.2 Cells use diffusible chemical signals for paracrine, endocrine, and synaptic signalling 83
  - 6.3 Chemical signals are detected by specific receptor molecules 86
  - 6.4 Second messenger activation of signalling cascades 89
  - 6.5 Some local mediators are synthesized as they are needed 92
  - 6.6 Steroid and thyroid hormones bind to intracellular receptors to regulate gene transcription 95
  - 6.7 Cells use specific cell surface molecules to assemble into tissues 96
  - 6.8 Gap junctions permit the exchange of small molecules and ions between neighbouring cells 96

## PART THREE

### The excitable tissues—nerve and muscle 99

- 7 Nerve cells and their connections 101
  - 7.1 Introduction 101
  - 7.2 The structure of the neurons and their axons 101
  - 7.3 Axons transmit information via a sequence of action potentials 103
  - 7.4 Chemical synapses 108
  - 7.5 Neuromuscular transmission is an example of fast synaptic signalling at a chemical synapse 114
- 8 Muscle 120
  - 8.1 Introduction 120
  - 8.2 The structure of skeletal and cardiac muscle 120

- 8.3 How does a skeletal muscle contract? 124
- 8.4 The activation and mechanical properties of skeletal muscle 127
- 8.5 Cardiac muscle 132
- 8.6 Smooth muscle 137

## PART FOUR

### The nervous system and special senses 145

- 9 Introduction to the nervous system 147
  - 9.1 Introduction 147
  - 9.2 The organization of the brain and spinal cord 147
  - 9.3 The cellular constituents of the nervous system 153
- 10 The physiology of motor systems 158
  - 10.1 Introduction 158
  - 10.2 The hierarchical nature of motor control systems 159
  - 10.3 Organization of the spinal cord 159
  - 10.4 Reflex action and reflex arcs 162
  - 10.5 The role of muscle proprioceptors in voluntary motor activity 164
  - 10.6 Effects of injury to the spinal cord 165
  - 10.7 Descending pathways involved in motor control 167
  - 10.8 The control of posture 169
  - 10.9 Goal-directed movements 170
  - 10.10 The role of the cerebellum in motor control 173
  - 10.11 The basal ganglia 177
  - 10.12 Concluding remarks 179
- 11 The autonomic nervous system 182
  - 11.1 Introduction 182
  - 11.2 Organization of the autonomic nervous system 182
  - 11.3 Chemical transmission in the autonomic nervous system 186
  - 11.4 Central nervous control of autonomic activity 190
  - 11.5 Disorders of autonomic function 191
- 12 General principles of sensory physiology 193
  - 12.1 Introduction 193
  - 12.2 Principles of sensory transduction 194
  - 12.3 The organization of sensory pathways in the CNS 197
- 13 The somatosensory system 201
  - 13.1 Introduction 201
  - 13.2 Skin mechanoreceptors 203
  - 13.3 Skin thermoreceptors 206
  - 13.4 Somatosensory pathways 208
  - 13.5 The sense of pain 210
  - 13.6 Itch 215
- 14 The eye and visual pathways 218
  - 14.1 Introduction 218
  - 14.2 The anatomy of the eye 218

- 14.3 The general physiology of the eye 221
- 14.4 The optics of the eye—image formation 224
- 14.5 The neurophysiology of vision 229
- 14.6 Colour vision 233
- 14.7 Eye movements 235

- 15 The ear and auditory pathways 239
  - 15.1 Introduction 239
  - 15.2 The physical nature of sound 239
  - 15.3 Structure of the auditory system 241
  - 15.4 Mechanism of sound transduction 243
  - 15.5 Central auditory processing 248
  - 15.6 Hearing deficits and their clinical evaluation 249
- 16 The vestibular system and the sense of balance 253
  - 16.1 Introduction 253
  - 16.2 Structure of the vestibular system 253
  - 16.3 The semicircular canals 254
  - 16.4 The otolith organs: the utricle and saccule 256
  - 16.5 The nervous pathways of the vestibular system 256
  - 16.6 Disorders of the vestibular system 257
- 17 The chemical senses—smell and taste 260
  - 17.1 Introduction 260
  - 17.2 The sense of smell (olfaction) 260
  - 17.3 The sense of taste (gustation) 263
- 18 Emotion, learning, and memory 268
  - 18.1 Introduction 268
  - 18.2 The physiological basis of emotion 268
  - 18.3 The limbic system 269
  - 18.4 Learning and memory 273
- 19 The cerebral cortex, sleep, and circadian rhythms 278
  - 19.1 Introduction 278
  - 19.2 The specific functions of the left and right hemispheres 278
  - 19.3 Speech 282
  - 19.4 How the EEG can be used to monitor the activity of the brain 285
  - 19.5 Sleep 287
  - 19.6 Circadian rhythms 289

## PART FIVE

### The endocrine system 293

- 20 Introduction to the endocrine system 295
  - 20.1 Introduction 295
  - 20.2 The chemical nature of hormones and their carriage in the blood 296
  - 20.3 The mechanism of action of hormones 297
  - 20.4 Measurement of hormone levels in body fluids 297

- 20.5 Patterns of hormone secretion—circadian rhythms and feedback control 298
- 21 The pituitary gland and hypothalamus 300**
  - 21.1 Introduction 300
  - 21.2 The hypothalamo-pituitary axis 300
  - 21.3 The hormones of the anterior pituitary gland 302
  - 21.4 Growth hormone (GH) 306
  - 21.5 Prolactin 309
  - 21.6 Adrenocorticotrophic hormone and melanocyte stimulating hormone 310
  - 21.7 Pituitary glycoprotein hormones: thyroid stimulating hormone (TSH), follicle stimulating hormone (FSH), and luteinizing hormone (LH) 311
  - 21.8 The role of the posterior pituitary gland (neurohypophysis) 311
- 22 The thyroid and parathyroid glands 317**
  - 22.1 Introduction 317
  - 22.2 The thyroid gland 317
  - 22.3 The endocrine regulation of plasma calcium: vitamin D, parathyroid hormone, and calcitonin 326
- 23 The adrenal glands 333**
  - 23.1 Introduction 333
  - 23.2 The adrenal glands—location and gross anatomy 333
  - 23.3 The adrenal cortex 334
  - 23.4 The adrenal medulla 340
- 24 The endocrine pancreas and the regulation of plasma glucose 343**
  - 24.1 Introduction 343
  - 24.2 Whole body handling of glucose 343
  - 24.3 Insulin and glucagon provide short-term regulation of plasma glucose levels 345
  - 24.4 Other hormones involved in the regulation of plasma glucose 349
  - 24.5 Plasma glucose regulation following a meal 350
  - 24.6 Lack of pancreatic insulin results in diabetes mellitus 350

## PART SIX

### Blood and the immune system 357

- 25 The properties of blood 359**
  - 25.1 Introduction 359
  - 25.2 The physical and chemical characteristics of plasma 360
  - 25.3 The formed elements of the blood 361
  - 25.4 Haematopoiesis—the formation of blood cells 365
  - 25.5 Iron metabolism 370
  - 25.6 The carriage of oxygen and carbon dioxide by the blood 371

- 25.7 Major disorders of the red and white blood cells 376
- 25.8 Mechanisms of haemostasis 379
- 25.9 Blood transfusions and the ABO system of blood groups 385
- 26 Defence against infection: the immune system 389**
  - 26.1 Introduction 389
  - 26.2 The principal features of the immune system 389
  - 26.3 Passive barriers to infection 390
  - 26.4 How does the immune system identify an invading organism? 391
  - 26.5 The natural immune system 391
  - 26.6 The acute inflammatory response 395
  - 26.7 The adaptive immune system 396
  - 26.8 Disorders of the immune system 403
  - 26.9 Tissue transplantation and the immune system 405

## PART SEVEN

### The cardiovascular system 409

- 27 Introduction to the cardiovascular system 411**
  - 27.1 Introduction 411
  - 27.2 The gross anatomy and organization of the circulation 411
  - 27.3 The structure of the systemic blood vessels 414
  - 27.4 The nerve supply of the cardiovascular system 416
- 28 The heart 419**
  - 28.1 Introduction 419
  - 28.2 The initiation of the heartbeat 420
  - 28.3 The heart as a pump—the cardiac cycle 423
  - 28.4 The heart sounds 427
  - 28.5 The measurement of cardiac output 429
  - 28.6 Cardiodynamics 432
  - 28.7 Heart failure 437
- 29 The electrocardiogram 443**
  - 29.1 Introduction 443
  - 29.2 Recording the ECG 443
  - 29.3 How the electrical activity of the heart gives rise to the ECG 448
  - 29.4 Clinical aspects of electrocardiography 449
  - 29.5 Treatment of arrhythmias 457
- 30 The circulation 460**
  - 30.1 Introduction 460
  - 30.2 Pressure and flow in the circulation 460
  - 30.3 The mechanisms that control the calibre of blood vessels 467
  - 30.4 The role of the central nervous system in the control of the circulation 471
  - 30.5 Hypertension 476
  - 30.6 Regional circulations 479

- 31 The microcirculation and lymphatic system 490
  - 31.1 Introduction 490
  - 31.2 The organization of the microcirculation 490
  - 31.3 Solute exchange between the capillaries and the tissues 491
  - 31.4 Exchange of fluid between the capillaries and the interstitium 494
  - 31.5 The organization and role of the lymphatic system 496

## **PART EIGHT**

### The respiratory system 501

- 32 Introduction to the respiratory system 503
  - 32.1 Introduction 503
  - 32.2 The application of the gas laws to respiratory physiology 504
  - 32.3 The structure of the respiratory system 506
- 33 The mechanics of breathing 514
  - 33.1 Introduction 514
  - 33.2 The lung volumes 514
  - 33.3 The processes of inspiration and expiration 515
  - 33.4 How much work is done by the respiratory muscles? 519
  - 33.5 Tests of ventilatory function 522
- 34 Alveolar ventilation and blood gas exchange 526
  - 34.1 Introduction 526
  - 34.2 Alveolar ventilation and dead space 526
  - 34.3 Alveolar ventilation is not uniform throughout the lung 528
  - 34.4 The bronchial and pulmonary circulations 529
  - 34.5 The matching of pulmonary blood flow to alveolar ventilation 531
  - 34.6 Gas exchange across the alveolar membrane occurs by physical diffusion 533
  - 34.7 Fluid exchange in the lungs 533
  - 34.8 Metabolic functions of the pulmonary circulation 534
  - 34.9 Age-related changes in respiratory function 534
- 35 The control of respiration 536
  - 35.1 Introduction 536
  - 35.2 The origin of the respiratory rhythm 536
  - 35.3 The reflex regulation of respiration 538
  - 35.4 The blood gases and the control of ventilation 540
  - 35.5 The effects of breathing different mixtures of O<sub>2</sub> and CO<sub>2</sub> 542
- 36 Pulmonary defence mechanisms and common disorders of the respiratory system 546
  - 36.1 Introduction 546
  - 36.2 Airway defence mechanisms 546
  - 36.3 Some common disorders of respiration 548
  - 36.4 Insufficient oxygen supply to the tissues—hypoxia and its causes 551

- 36.5 Respiratory failure 553

- 37 The physiology of high altitude and diving 556
  - 37.1 Introduction 556
  - 37.2 The physiological effects of high altitude 556
  - 37.3 The effects of high environmental pressure 561
  - 37.4 Breath-hold diving 564
- 38 The physiology of exercise 567
  - 38.1 Introduction 567
  - 38.2 Work and exercise 567
  - 38.3 Metabolism in exercise 568
  - 38.4 Cardiovascular and respiratory adjustments during exercise 570
  - 38.5 Matching cardiac output and ventilation to the demands of exercise 573
  - 38.6 Effects of training 576

## **PART NINE**

### The regulation of the internal environment 579

- 39 The renal system 581
  - 39.1 Introduction 581
  - 39.2 The anatomical organization of the kidneys and urinary tract 582
  - 39.3 Renal blood flow is kept constant by autoregulation 585
  - 39.4 The nephron regulates the internal environment by ultrafiltration followed by selective modification of the filtrate 587
  - 39.5 Tubular absorption and secretion 594
  - 39.6 Tubular transport in the loop of Henle 601
  - 39.7 The distal tubules regulate the ionic balance of the body 602
  - 39.8 The kidneys regulate the osmolality of the plasma by adjusting the amount of water reabsorbed by the collecting ducts 604
  - 39.9 The collection and voiding of urine 609
  - 39.10 Changes in renal function with age and renal failure 612
- 40 Fluid and electrolyte balance 617
  - 40.1 Introduction 617
  - 40.2 The distribution of body water between compartments 617
  - 40.3 Body fluid osmolality and volume are regulated independently 619
  - 40.4 Dehydration and disorders of water balance 623
  - 40.5 Haemorrhage 624
  - 40.6 Oedema 627
  - 40.7 Disorders of electrolyte balance 631
- 41 Acid–base balance 635
  - 41.1 Introduction 635
  - 41.2 The physical chemistry of acid–base balance 636

- 41.3 What factors determine the pH of an aqueous solution? 637
- 41.4 How the body regulates plasma pH 641
- 41.5 Primary disturbances of acid-base balance 643
- 41.6 Disorders of acid-base balance are compensated by respiratory and renal mechanisms 645
- 41.7 Clinical evaluation of the acid-base status of a patient using the pH-[HCO<sub>3</sub><sup>-</sup>] diagram 647

## **42 The skin and thermoregulation 651**

- 42.1 Introduction 651
- 42.2 The main structural features of the skin 652
- 42.3 The accessory structures of the skin—hairs, nails, and glands 655
- 42.4 The cutaneous circulation 657
- 42.5 Heat exchange between the skin and surroundings 657
- 42.6 The role of the hypothalamus in the regulation of body temperature 662
- 42.7 Thermoregulatory responses to cold 663
- 42.8 Thermoregulatory responses to heat 665
- 42.9 Disorders of thermoregulation 665
- 42.10 Special thermoregulatory problems of the newborn 667
- 42.11 Fever 667

## **PART TEN**

## **The gastrointestinal system 671**

### **43 Introduction to the gastrointestinal system 673**

- 43.1 Introduction 673
- 43.2 The general organization of the gastrointestinal system 673
- 43.3 Nervous and hormonal control of the gastrointestinal tract 676
- 43.4 General characteristics of the blood flow to the GI tract 680

### **44 The gastrointestinal tract 682**

- 44.1 Introduction 682
- 44.2 Intake of food, chewing, and salivary secretion 683
- 44.3 The stomach 689
- 44.4 The composition of gastric juice 691
- 44.5 The regulation of gastric secretion 693
- 44.6 The storage, mixing, and propulsion of gastric contents 695
- 44.7 The small intestine 699
- 44.8 Motility of the small intestine 703
- 44.9 The exocrine functions of the pancreas 704
- 44.10 The absorption of digestion products in the small intestine 710
- 44.11 The large intestine 715

### **45 The liver and gall bladder 723**

- 45.1 Introduction 723
- 45.2 The structure of the liver 723
- 45.3 The hepatic circulation 726
- 45.4 Bile production by the hepatocytes 726
- 45.5 The excretory role of bile 729
- 45.6 Energy metabolism and the liver 732
- 45.7 Endocrine functions of the liver 733
- 45.8 Detoxification by the liver 734
- 45.9 Liver failure 735

### **46 Nutrition and the regulation of food intake 739**

- 46.1 Introduction 739
- 46.2 The principal requirements for a balanced diet 739
- 46.3 Regulation of dietary intake 748
- 46.4 Measurements used to monitor nutritional status 750
- 46.5 Enteral and parenteral nutritional support 752

### **47 Energy balance and the control of metabolic rate 754**

- 47.1 Introduction 754
- 47.2 The chemical processes of the body produce heat 754
- 47.3 Energy balance 755
- 47.4 How much heat is liberated by metabolism? 756
- 47.5 Basal metabolic rate (BMR) and the factors that affect it 759
- 47.6 Physiological factors that affect metabolic rate 760
- 47.7 The actions of hormones on energy metabolism 761

## **PART ELEVEN**

## **Reproduction and growth 763**

### **48 The physiology of the male and female reproductive systems 765**

- 48.1 Introduction 765
- 48.2 Reproductive physiology of the male 766
- 48.3 Reproductive physiology of the female 773
- 48.4 Activation and regression of the gonads—puberty and the menopause 786

### **49 Fertilization, pregnancy, and lactation 790**

- 49.1 Introduction 790
- 49.2 The sexual reflexes 790
- 49.3 Fertilization 794
- 49.4 Implantation and formation of the placenta 796
- 49.5 The placenta as an organ of exchange between mother and fetus 799
- 49.6 The placenta as an endocrine organ 801
- 49.7 The infant is delivered around 38 weeks after conception—what triggers parturition? 803
- 49.8 Changes in maternal physiology during gestation 805
- 49.9 Nutritional requirements of pregnancy 810

49.10	Lactation—the synthesis and secretion of milk after delivery	813
49.11	Lactation is triggered by the fall in steroid secretion that follows delivery	815
<b>50</b>	<b>Fetal and neonatal physiology</b>	<b>821</b>
50.1	Introduction	821
50.2	The fetal circulation is arranged to make the best use of a poor oxygen supply	821
50.3	Respiratory and cardiovascular changes at birth	824
50.4	Following delivery, the fetal circulation adapts to pulmonary gas exchange	827
50.5	The fetal adrenal glands and kidneys	828
50.6	The gastrointestinal tract of the fetus and neonate	830
50.7	Temperature regulation in the newborn infant	830
50.8	Development of the male and female reproductive systems	832
<b>51</b>	<b>The physiology of bone and the control of growth</b>	<b>838</b>
51.1	Introduction	838
51.2	The physiology of bone	841
51.3	Bone development and growth (osteogenesis)	844
51.4	The role of growth hormone in the control of growth	850
51.5	The role of other hormones in the process of growth	853
51.6	Disorders of the skeleton	855
51.7	Growth of cells, tissues, and organs	856
51.8	Alterations in cell differentiation: carcinogenesis	857
<b>Appendix 1 Glossary of terms and common abbreviations</b>		<b>863</b>
<b>Appendix 2 SI units</b>		<b>903</b>
<b>Index</b>		<b>905</b>
