Introduction	xiii
I.1. Sheet 1: The Logistics Function	xiii
I.1.1. Definitions related to the supply chain.	xiv
I.1.2. Definitions related to Supply Chain Management	xv
I.1.3. Definitions related to Sustainable Supply Chain Management.	xvi
I.2. Sheet 2: Supply Chain Flows.	xviii
I.2.1. Fundamental flows in the supply chain	xviii
I.2.2. “Internal” flow policies in the supply chain.	xix
I.3. Sheet 3: The Main Models of the Global Supply Chain	xxi
I.3.1. The Supply Chain Management structure according to Christopher (1992 onward)	xxi
I.3.2. The World Class Logistics model	xxii
I.3.3. The SCOR® Supply Chain Operations Reference Model (1996)	xxiii
I.3.4. The model of the Global Supply Chain Forum Structure of [LAM 98]	xxiv
I.3.5. The model by Mentzer <i>et al.</i>	xxiv
I.4. Sheet 4: The Main Logistics Associations	xxv
I.4.1. The main national and international associations of logistics professionals	xxv
I.4.2. The main clusters of French competitiveness in logistics	xxviii
I.4.3. The main French associations of teacher–researchers in logistics	xxix
I.4.4. France’s leading transport and logistics research laboratories	xxx

Chapter 1. Operators in Logistics	1
1.1. Sheet 5: Transport and Logistics Jobs	1
1.1.1. Families of jobs in transport and logistics	1
1.1.2. Key Transport and Logistics Functions according to ASLOG and Recruitment Firm, Michael Page	2
1.2. Sheet 6: The Supply Chain Manager	5
1.2.1. Tasks, activities and skills of the Supply Chain Manager	5
1.2.2. The Supply Chain Manager and his/her relationship with other company activities	5
1.3. Sheet 7: Logisticians and Interactions with Other Internal Departments of the Company	8
1.3.1. Daily relationships with other services	9
1.3.2. The “new” relationships: the ecology/environment service	11
1.4. Sheet 8: The Supplier–Customer Relationship	14
1.4.1. The supplier, the focal company and the customer according to Lambert <i>et al.</i>	14
1.4.2. The supplier – the industry – the distributor – the end customer: the supply chain quartet	15
1.4.3. Other operators in the supply chain	16
1.5. Sheet 9: Operators of Distribution	17
1.5.1. Principles of distribution in a supply chain	17
1.5.2. Distribution jobs	18
1.5.3. The case for wholesalers.	18
1.6. Sheet 10: Logistics Service Providers	20
1.6.1. Logistics services: between subcontracting and outsourcing.	21
1.6.2. Levels of expertise in logistics services.	22
1.7. Sheet 11: Operators in the Transport of Goods for Third Parties.	25
1.7.1. Modes of freight transport.	25
1.7.2. Operators in freight transport for third parties	25
1.8. Sheet 12: Operators in Urban Logistics	28
1.8.1. The classification of Chanut <i>et al.</i>	28
1.8.2. Cerema classification	28
1.8.3. Urban courier operators	29
1.9. Sheet 13: Reverse Logistics Operators.	29
1.9.1. Different categories of stakeholders in reverse logistics	31
1.9.2. The example of waste treatment operators	32

Chapter 2. Innovation in Logistics	35
2.1. Sheet 14: Different Types of Innovation.	35
2.1.1. Social innovation versus technological innovation	35
2.1.2. Technological innovation versus non-technological innovation.	36
2.2. Sheet 15: The Concept of Eco-innovation and Its Application in Logistics.	39
2.2.1. The use of the prefix “eco” in industry	39
2.2.2. The “eco” and innovation relationship	40
2.2.3. The “eco” and logistics relationship.	40
2.3. Sheet 16: Sustainable Logistics Innovation	42
2.3.1. The concept of sustainable innovation	42
2.3.2. Sustainable logistics innovation: examples of award-winning companies.	44
Chapter 3. Warehouse Management	47
3.1. Sheet 17: Design of a Warehouse.	47
3.1.1. The role of a warehouse	47
3.1.2. Design of a warehouse.	48
3.2. Sheet 18: Layout of a Warehouse.	49
3.2.1. Areas in a warehouse.	50
3.2.2. Types of process or methods of preparation in the warehouse	53
3.2.3. Equipment in a warehouse	53
3.3. Sheet 19: Types of Stock	56
3.3.1. What is stock?.	56
3.3.2. The nature of stock	57
3.3.3. The destination of stock	57
3.3.4. The stock and “its quantity”.	57
3.3.5. Stock rotation	58
3.3.6. The support of goods: the pallet	59
3.4. Sheet 20: Inventory Procedures	60
3.4.1. Physical, permanent, intermittent and rotating inventory	60
3.4.2. The Pareto Principle and the A-B-C classification	61
3.4.3. Example of calculation of the A-B-C method	62
3.5. Sheet 21: The Supply Quantity	64
3.5.1. Types of supply	64
3.5.2. Calculation methods	65

3.6. Sheet 22: The Valuation of Stock	66
3.6.1. When to apply stock valuation methods?	66
3.6.2. Example of calculation using the Weighted Average Unit Cost method at the end of the period.	67
3.6.3. Example of calculation using the Weighted Average Unit Cost method after each input	68
3.6.4. Example of calculation according to the First-In-First-Out method	69

Chapter 4. Upstream and Supply Logistics 71

4.1. Sheet 23: The Relationship Between the Purchasing and Logistics Department.	71
4.1.1. The buyer's tasks	71
4.1.2. The Bullwhip, "whiplash" or Forrester effect	73
4.2. Sheet 24: Tendering Process, Specifications and Logistics Service Contract	76
4.2.1. Tendering process and specifications	76
4.2.2. The logistics service contract	79
4.3. Sheet 25: The InCoTerms	80
4.3.1. Functions of the InCoTerms	80
4.3.2. The different InCoTerms	81
4.3.3. The Baltic Dry Index.	83
4.3.4. Packing list.	83

Chapter 5. Production Logistics 85

5.1. Sheet 26: Key Concepts of Production Logistics.	85
5.1.1. Criteria in production	85
5.1.2. Workflows in production: push, pull and tight flows	86
5.1.3. Just-in-time (JIT)	87
5.2. Sheet 27: Lean Manufacturing Fundamentals.	88
5.2.1. Industrial excellence	89
5.2.2. The notion of waste.	90
5.2.3. Kaizen through continuous improvement.	90
5.2.4. The Heijunka or the smoothing of production (see Sheet 32)	92
5.2.5. The just-in-time	92
5.2.6. The Jidoka	93
5.3. Sheet 28: Lean Manufacturing Tools.	93
5.3.1. Value stream mapping	93
5.3.2. The operations diagram	94
5.3.3. The 5S approach	95
5.3.4. Delayed differentiation	95

5.3.5. The SMED method	95
5.3.6. The assembly line.	95
5.3.7. Ergonomics of the workstation	96
5.3.8. The unitary production flow	96
5.3.9. The Poka-Yoke	97
5.3.10. The Kanban	97
5.3.11. The “small train” or Mizusumashi	97
5.3.12. Short interval animation	98
5.4. Sheet 29: Implementation of Workshops	98
5.4.1. Implementation methods	98
5.4.2. Main types of implementation	99
5.5. Sheet 30: Production Planning: the Business Plan	101
5.5.1. Levels of production planning	101
5.5.2. The business plan.	101
5.6. Sheet 31: Production Planning: Sales and Operations Planning	104
5.6.1. The relationship between sales forecasts and production potential.	104
5.6.2. Example of a sales and operations plan	106
5.7. Sheet 32: The Production Plan: the Master Production Schedule – Material Requirement Plan – Production Smoothing.	108
5.7.1. The relationship between the sales and operations plan and the master production schedule	109
5.7.2. The architecture of a master production schedule	109
5.7.3. Determination of net requirements.	110
5.7.4. Production smoothing	113
Chapter 6. Downstream or Distribution Logistics	115
6.1. Sheet 33: The Problem of Downstream or Distribution Logistics	115
6.1.1. The problem of downstream or distribution logistics	115
6.1.2. The efficient consumer response (ECR) approach	116
6.1.3. SSM, CPFR and MMS.	117
6.1.4. The case of e-commerce.	119
6.2. Sheet 34: The Warehouse/Platform Alternative in Distribution Circuit	121
6.2.1. The difference between channel, circuit and distribution network	121
6.2.2. Selection criteria for the location of a repository	122
6.2.3. The alternative between warehouses and/or platforms	123
6.2.4. The case of the urban distribution center (UDC)	124

6.3. Sheet 35: Urban Logistics or Last Mile Logistics	125
6.3.1. The problems of urban logistics	125
6.3.2. Operators in urban logistics	126
6.3.3. The division of urban logistics spaces.	126
6.3.4. Means to limit the consequent and polluting transport of goods	127
6.3.5. Reverse logistics	128

Chapter 7. The “Companions” of Logistics 131

7.1. Sheet 36: Traceability.	131
7.1.1. The challenges of traceability.	131
7.1.2. Traceability functions: tracking and tracing	132
7.1.3. Types of traceability	132
7.1.4. The four levels of traceability tools	133
7.2. Sheet 37: Freight Transport	135
7.2.1. The problem with freight transport	136
7.2.2. Regulations in terms of international road haulage and cabotage	136
7.2.3. Types of road transport and loading	137
7.2.4. Types of road vehicles	138
7.2.5. Other types of freight transport.	139
7.3. Sheet 38: Information and Communication Technologies, and Information Systems	141
7.3.1. The difference between a software package and a software	142
7.3.2. ICT families in logistics	142
7.3.3. Software packages and software in logistics	143
7.4. Sheet 39: Quality Implements and Logistics	146
7.4.1. Shewhart’s control chart.	147
7.4.2. The Ishikawa diagram and the Causes and Effect Diagram with the Addition of Cards (CEDAC) of Fukuda.	147
7.4.3. The Ademiecki–GANTT diagram and the PERT network	149
7.4.4. The Pareto diagram by Joseph Juran	149
7.4.5. Flow sheets	149
7.4.6. Histogram	150
7.4.7. The WWWHHW and the five Why’s	150
7.4.8. The PDCA method or the Deming–Shewhart wheel	151

7.5. Sheet 40: Environmental Decrees and Directives	151
7.5.1. Ecotaxes	151
7.5.2. Environmental directives and decrees	152
7.6. Sheet 41: Measuring Performance in Logistics	154
7.6.1. The notion of quality and quantity indicators	154
7.6.2. Indicator themes	155
7.6.3. The dashboard.	156
Conclusion.	159
Bibliography.	163
Index	183
