Design of Assistive Technology for Ageing Populations

 Springer

Contents

Part I Approaches to Designing With and for Older People	
1	Designing with and for Older People 3
	Joe Langley, Gemma Wheeler, Rebecca Partridge, Remi Bec, Dan Wolstenholme and Lise Sproson
1.1	Introduction 3
1.2	Literature Review 4
1.2.1	Assistive Technology 4
1.2.2	The Role of Design 5
1.2.3	Co-design with Older Adults 5
1.2.4	Co-design for Assistive Technology 6
1.2.5	Summary 7
1.3	Case Study: The Parkinson’s Service in the South West Peninsula, United Kingdom 7
1.4	Lab4Living’s Approach to Co-design 8
1.4.1	Principle 1: Valuing Different Perspectives 8
1.4.2	Principle 2: Adapting Co-design Methods to the Needs of the Group and/or Individuals 9
1.4.3	Principle 3: ‘Visibility and Transparency’ 9
1.4.4	Principle 4: Valuing Different Forms of Knowledge 10
1.4.5	Principle 5: Less Talking, More Doing 11
1.4.6	Practical Tips 12
1.5	Discussion 13
1.6	Conclusion 15
	Bibliography 15
2	A User-Centred Approach to Digitalising Care Homes 21
	Philippa Hedley-Takhar, Angel Jimenez-Aranda, Vitaveska Lanfranchi, Sue Pownall, Lise Sproson and Wendy B. Tindale
2.1	Introduction 21

2.2	Literature Review	23
2.2.1	Electronic Patient Records (EPR)	23
2.2.2	Wearable Health Devices and Remote Sensing	24
2.2.3	Telehealth	24
2.3	Case Study—Digital Care Home	25
2.3.1	The Design Process	25
2.3.2	The Technology	26
2.3.3	The User Interface	28
2.3.4	Evaluation	29
2.4	Case Study—Care Homes Guide for Dysphagia	31
2.4.1	Methodology	32
2.4.2	Technology	33
2.4.3	Evaluation	35
2.5	Conclusions and Next Steps	35
	References	37
3	Contemporary Themes in the Design of AT for the Ageing Population: Materiality, Co-design and Cultural Influences	41
	Gabriella Spinelli, Massimo Micocci, Emmanuel Tseklevs, Yu-Han Wang, Wendy Martin, Yonghun Lim and Umber Shamim	
3.1	The Design of Assistive Technologies (ATs) Beyond Functional Requirements	42
3.2	Adoption and Abandonment of ATs.	44
3.3	ATs Design for Mobility Impairments Among Older People.	45
3.4	Co-design Approaches for ATs: Designing with Older Adults	46
3.5	ATs as Objects: Materiality, Emotions and Everyday Life	48
3.6	Culture as an Interpretative Framework for the Use of ATs	50
3.7	Reflections on the Design of ATs	52
	References	52
4	The Value and Place for Empathy in Designing for Older People	59
	Andree Woodcock, Deana McDonagh, Paul Magee and Mike Tovey	
4.1	Introduction	60
4.2	Empathy.	61
4.3	Discrete Learning Interventions (DLIs).	63
4.4	Implementation, Participant Activities and Buy in	66
4.5	Helping Students Address the Empathy Horizon	68
4.6	Results	70
4.6.1	Transference of Learning Out of the Classroom	71
4.6.2	The <i>Felt</i> Experience	71
4.6.3	Application to Design	72
4.6.4	Iterative Design of the DLI	74

4.7	Conclusions	74
	References	75

Part II Usability and Uptake of Assistive Technology

5	The Development of a Feature Matrix for the Design of Assistive Technology Products for Young Older People	81
	Andree Woodcock, Jane Osmond and Nikki Holliday	
5.1	Introduction	82
5.2	Brief Literature Review	82
5.3	Qualitative Research	84
5.3.1	Market Analysis	84
5.3.2	Product Review	85
5.3.3	Product Developer Survey	87
5.3.4	Interviews with Designers	89
5.3.5	Co-creation Workshops with AgeUK	91
5.4	Business Models	92
5.5	The Matrix	93
5.6	Conclusions	93
5.6.1	The Consumer Journey for ALT and Developed Business Models	101
	References	101
6	Assistive Technology (AT) Usability and Adoption: Future Drivers	105
	Avril D. McCarthy and Louise Moody	
6.1	Introduction	105
6.1.1	Improving the Acceptability of AT	107
6.1.2	Human Factors and Usability Engineering	108
6.2	Adverse Events Due to Human Factors and Usability Issues	109
6.2.1	Self-management of Diabetes Alert	109
6.2.2	Hoists and Wheelchairs	110
6.2.3	Patient Safety Alerts	111
6.2.4	Events Highlighted by MAUDE	111
6.3	Regulation and Standards	115
6.3.1	Medical Devices and Key Regulatory Changes	115
6.3.2	Application of Usability Engineering to Medical Devices (ISO/IEC 62366)	116
6.3.3	Applying the Standard: Examples from Devices for Dignity	117
6.4	Future Design and Economic Drivers	120
6.5	Conclusions	121
	References	122

Part III Dignity and Ageing

7	Experiencing Aging: Analogue Versus Virtual	129
	Deana McDonagh and Debra Reardanz	
7.1	Introduction to Experiential Learning	130
7.2	Impact of the Environment	131
7.3	Retirement Community	132
	7.3.1 Part A: Virtual Reality	133
	7.3.2 Part A: Reactions to Virtual Reality	134
	7.3.3 Part B: The Aging Suit	137
7.4	Discussion	142
7.5	Conclusion	143
	References	144
8	Dignity in Ageing: Living Well for Longer	147
	Katherine Jeays-Ward, Vitaveska Lanfranchi, Avril D. McCarthy, Liz Pryde, Lise Sproson and Wendy B. Tindale	
8.1	Introduction	147
8.2	The Need for Technology Development to Support the Health Needs of Ageing Populations	148
8.3	A Sense of Scale—How Many People Are Affected by Long-Term Conditions and Disabilities?	149
8.4	Challenges Arising from Long-Term Conditions and Multi-morbidities	150
8.5	Health Impacts Beyond the Healthcare Setting	151
8.6	Quantifying the Value and Impact of Loss of Dignity	152
8.7	Opportunities for Technology to Support Care Across the Spectrum of Healthcare Provision, and Beyond	153
8.8	The NIHR and Its Infrastructure	154
8.9	D4D Development Model	156
8.10	D4D Case Studies Illustrating the D4D Development Models	157
	8.10.1 (Stages 1 and 2)—Identification of Unmet Needs and Validation of Unmet Needs	157
	8.10.2 (Stage 3)—Project/Product Design	159
	8.10.3 (Stage 4)—Product Development	161
	8.10.4 (Stage 5)—Evaluation	162
	8.10.5 (Stage 6)—Dissemination and Adoption	164
8.11	Conclusions	164
	References	165

Part IV New Technologies

9 **Unlocking Service Flow—Fast and Frugal Digital Healthcare Design** 171
 John Knight, Elliot Ross, Chris Gibbons and Tom McEwan
 9.1 Introduction 171
 9.2 Theoretical Foundations 173
 9.3 Approach 174
 9.4 Analysis 178
 9.4.1 Results 178
 9.5 Agile Service Design 180
 9.5.1 Integrating Service Design, Delivery
 and Operations 182
 9.5.2 The Flow Methodology 183
 9.6 Conclusion 185
 References 186

10 **MATUROLIFE: Using Advanced Material Science to Develop
the Future of Assistive Technology** 189
 Louise Moody and Andrew J. Cobley
 10.1 Introduction 189
 10.1.1 Smart Functionality and Assistive Technology 190
 10.1.2 MATUROLIFE 190
 10.2 Smart Material Innovation 191
 10.3 Design and Development of Prototypes 194
 10.3.1 Forming a Design Direction 195
 10.3.2 Design Development 196
 10.3.3 Technical Development and Integration 197
 10.4 Testing and Evaluation 197
 10.4.1 Iterative Testing 198
 10.4.2 Technical Testing 198
 10.4.3 Final Evaluation 199
 10.5 Conclusions 199
 References 200

11 **Domestic Robots for Older Adults: Design Approaches
and Recommendations** 203
 Rebecca Wiczorek, Megan A. Bayles and Wendy A. Rogers
 11.1 Introduction 203
 11.2 Characteristics of the Target Group of Older Adults 204
 11.2.1 Functional Decline with Age 204
 11.2.2 Other Characteristics of Older Adults 207
 11.2.3 Summary 207
 11.3 Context Factors of the Home Environment 208
 11.3.1 Motion and Navigation 208
 11.3.2 Interaction with Older People in the Home 208

11.3.3	Installation and Maintenance	209
11.3.4	Summary	209
11.4	Methods Relevant for the Design of Domestic Robots for Older Adults	209
11.4.1	User-Centered Development	210
11.4.2	Ethical Considerations	210
11.4.3	Summary	211
11.5	Tasks	212
11.5.1	Activities of Daily Living (ADLs)	212
11.5.2	Instrumental Activities of Daily Living (IADLs)	213
11.5.3	Enhanced Activities of Daily Living (EADLs)	213
11.6	Functionalities and Corresponding Features	214
11.7	Discussion and Conclusion	216
	References	217

Part V Supporting the Mobility Needs of Older People

12	Strategies for Mitigating the Injury Risks of Using Motorised Mobility Scooters	223
	Selby Coxon and Jennie Oxley	
12.1	Background	223
12.2	Vehicle Design and Operation	226
12.3	Regulations	226
12.4	The Impact of Urban Environmental Design	227
12.5	Risk of Injury	228
12.6	Mitigating Injury Risks and Enhancing Safe Mobility	229
12.7	Conclusion	231
	References	232
13	Development of a Wheelchair Stability Assessment System: Design Tools and Approaches	235
	Louise Moody, Paul Magee and Dimitar Stefanov	
13.1	Introduction	236
13.1.1	Wheelchair Prescription	236
13.1.2	Design for Wheelchair Services	237
13.1.3	WheelSense®	238
13.2	Design Approach and Methods	238
13.2.1	Multidisciplinary Approach	239
13.2.2	User and Stakeholder Centered Design	239
13.2.3	Developing a Shared Design Direction	241
13.2.4	The CUbe Ideas Generation Tool: Developing a Shared Vision for the Product	242
13.2.5	Design Evolution and the Use of Sketch Models	244
13.2.6	CAD Methods	246

13.3	Integration of Components into the Final Functional Prototype	246
13.3.1	The Platform and Frame	247
13.3.2	Internal Architecture	247
13.3.3	Measurement System	248
13.3.4	Deployment and Transportation	249
13.3.5	Software and the Graphic User Interface (GUI)	249
13.4	Iterative Testing and Evaluation	251
13.5	Discussion	252
	References	253
14	Applying Design Methods to Promote Older Adults' Walking Activities Based on Their Hobbies and Personal Interests	257
	Marjolein C. den Haan, Rens G. A. Brankaert and Yuan Lu	
14.1	Introduction	257
14.2	Related Work	259
14.3	Process	261
14.4	Results	263
14.5	Discussion	269
14.6	Conclusion	271
	References	271
15	Future Older Adults and Mobile Applications for Health	275
	Berrak Karaca Şalgamcıoğlu	
15.1	Introduction	275
15.2	Older Adults and Mobile Health	277
15.3	Mobile Technologies and Pre-installed Health Applications	278
15.4	Future Older Adults in Turkey and Mobile Health Applications: Using Verbal Protocol Analysis to Understand Their Needs	280
15.4.1	Gap Between Real Life Health Services and Mobile Health Applications	283
15.4.2	Gap Between Cultures: Young, Global, Digital Versus Old, Local, Analogue	287
15.5	Conclusion	289
	References	290
16	Mobility Information Services for Older People	293
	Cindy Mayas and Heidi Krömker	
16.1	Introduction	293
16.2	Mobility Information Needs	294
16.2.1	Mobility Behavior of Senior Mobility Users	295
16.2.2	Personas for Senior Mobility Users	296
16.2.3	Information Needs of Senior Mobility Users	297

16.3	Guidelines for the User-Oriented Development of Mobility Information	299
16.3.1	Analysis of Senior Usage Context	299
16.3.2	Conceptual Design	300
16.3.3	User-Centered Evaluation	301
16.4	Case Study: Interactive Public Mobility Information	302
16.5	Recommendations	305
	References	305

Part VI Assistive Technology and Dementia

17	Improving the Quality of Life of Individuals with Dementia Using Personal Digital Media	311
	Kanvar Nayer and Selby Coxon	
17.1	Introduction	312
17.2	A Personalised Multimedia System for Persons with Dementia	314
17.3	The Information Architecture	315
17.4	The Interface Design	317
17.5	Testing the Efficacy of Multimedia Interaction	326
	References	330
18	Promoting Personhood for People with Dementia Through Shared Social Touchscreen Interactions	335
	Sonja Pedell, Stu Favilla, Andrew Murphy, Jeanie Beh and Tanya Petrovich	
18.1	Introduction	335
18.2	Current Research and Literature	337
18.2.1	Personhood and Challenges in Care Environments	337
18.2.2	Benefits of (Touch) Technologies for Dementia	338
18.2.3	Wellbeing and Social Interaction (Social Connectedness)	339
18.2.4	Technology Development and Ease of Use	339
18.2.5	Interest-Based Design	340
18.2.6	Co-design	340
18.3	Aim of Our Work	341
18.4	Case Study 1: A Better Visit Application	341
18.4.1	Context and Environment	341
18.4.2	Participants	342
18.4.3	Iterative Co-design of Touchscreen Application	343
18.4.4	Final Designs	344
18.4.5	Results of Final Evaluation	346
18.5	Case Study 2: Touchscreen Collaborative Music	349
18.5.1	Context and Environment	349
18.5.2	Participants	350

18.5.3	Iterative Co-design of Touchscreen Application	351
18.5.4	Final Design	352
18.5.5	Results from Evaluation	353
18.6	Recommendations	355
18.6.1	Design for Rich and Stimulating Exploration (1)	356
18.6.2	Design for Responsive and Expressive Interaction (2)	356
18.6.3	Provide Participants with Identifiable, but Equal Active Roles (3)	356
18.6.4	Encourage Engagement with Each Other in the Moment (Social Connectedness) (4)	357
18.6.5	Simple Interaction Design but Non-patronising Content (5)	357
18.6.6	Minimal Scaffolding (Short Demonstration) for Skill Development (6)	357
18.7	Concluding Comments	358
	References	358
19	Realising the Potential of People Living with Dementia Through Co-designing and Making Interventions	363
	Euan Winton and Paul A. Rodgers	
19.1	The Wicked Problem of Dementia	363
19.2	The Key Issues of Dementia	364
19.3	Designed with Dementia; A Suite of Design Projects	366
19.4	Designed with Dementia: 75BC	367
19.5	Designed with Dementia: Stained-Glass Window for Glasgow	368
19.6	Designed with Dementia: Perfect Day Cards	369
19.7	Designed with Dementia: Disrupting Dementia Tartan	371
19.8	Analysis	372
19.9	Why Are These Interventions Important?	373
19.10	Conclusions	374
	References	375
