<i>Preface</i>	<i>page xiii</i>
Introduction	1
PART I WEAK AND STRONG SOLUTIONS	
Overview of Part I	17
1 Function spaces	19
1.1 Domain of the flow	19
1.2 Derivatives	20
1.3 Spaces of continuous and differentiable functions	21
1.4 Lebesgue spaces	23
1.5 Fourier expansions	26
1.6 Sobolev spaces $W^{k,p}$	28
1.7 Sobolev spaces H^s with $s \geq 0$	29
1.8 Dual spaces	37
1.9 Bochner spaces	38
Notes	44
Exercises	44
2 The Helmholtz–Weyl decomposition	47
2.1 The Helmholtz–Weyl decomposition on the torus	48
2.2 The Helmholtz–Weyl decomposition in $\Omega \subset \mathbb{R}^3$	52
2.3 The Stokes operator	57
2.4 The Helmholtz–Weyl decomposition of \mathbb{L}^q	63
Notes	66
Exercises	68

3	Weak formulation	70
3.1	Weak formulation	70
3.2	Basic properties of weak solutions	73
3.3	Alternative spaces of test functions	79
3.4	Equivalent weak formulation	82
3.5	Uniqueness of weak solutions in dimension two	84
	Notes	86
	Exercises	87
4	Existence of weak solutions	89
4.1	The Galerkin method	89
4.2	Existence of weak solutions on bounded domains	92
4.3	The strong energy inequality	98
4.4	Existence of weak solutions on the whole space	101
4.5	The Aubin–Lions Lemma	103
	Notes	107
	Exercises	108
5	The pressure	111
5.1	Solving for the pressure on \mathbb{T}^3 and \mathbb{R}^3	112
5.2	Distributional solutions in the absence of boundaries	115
5.3	Additional estimates on weak solutions	117
5.4	Pressure in a bounded domain	122
5.5	Applications of pressure estimates	124
	Notes	125
	Exercises	125
6	Existence of strong solutions	127
6.1	General properties of strong solutions	128
6.2	Local existence of strong solutions	133
6.3	Weak–strong uniqueness and blowup	137
6.4	Global existence for small data in V	140
6.5	Global strong solutions in the two-dimensional case	143
6.6	Strong solutions on the whole space	144
	Notes	145
	Exercises	146

7	Regularity of strong solutions	148
7.1	Regularity in space	149
7.2	Regularity in space–time	153
	Notes	155
	Exercises	156
8	Epochs of regularity and Serrin’s condition	158
8.1	The putative set of singular times	158
8.2	The box-counting and Hausdorff dimensions	162
8.3	Epochs of regularity	166
8.4	More bounds on weak solutions	169
8.5	Serrin’s condition	170
8.6	Epochs of regularity on the whole space	175
	Notes	176
	Exercises	178
9	Robustness of regularity and convergence of Galerkin approximations	180
9.1	Robustness of strong solutions	180
9.2	Convergence of Galerkin approximations	184
	Notes	188
	Exercises	190
10	Local existence and uniqueness in $\dot{H}^{1/2}$	192
10.1	Critical spaces	192
10.2	Fractional Sobolev spaces and criticality of $\dot{H}^{1/2}$	194
10.3	Local existence for initial data in $\dot{H}^{1/2}$	195
10.4	An auxiliary ODE lemma	201
	Notes	202
	Exercises	204
11	Local existence and uniqueness in L^3	206
11.1	Preliminaries	207
11.2	Local existence in L^3	208
11.3	A proof of Lemma 11.2 on \mathbb{T}^3	215
	Notes	216
	Exercises	217

PART II LOCAL AND PARTIAL REGULARITY

Overview of Part II	221
12 Vorticity	224
12.1 The vorticity equation	224
12.2 The Biot–Savart Law	226
12.3 The Beale–Kato–Majda blowup criterion	228
12.4 The vorticity in two dimensions	230
12.5 A local version of the Biot–Savart Law	231
Notes	236
Exercises	237
13 The Serrin condition for local regularity	238
13.1 Local weak solutions	238
13.2 Main auxiliary theorem: a smallness condition	243
13.3 The case $\frac{2}{q'} + \frac{3}{q} < 1$	244
13.4 The case $\frac{2}{q'} + \frac{3}{q} = 1$	252
13.5 Local Hölder regularity in time for spatially smooth u	259
Notes	261
Exercise	262
14 The local energy inequality	263
14.1 Formal derivation of the local energy inequality	264
14.2 The Leray regularisation	265
14.3 Rigorous derivation of the local energy inequality	268
14.4 Derivation of an alternative local energy inequality	272
14.5 Derivation of the strong energy inequality on \mathbb{R}^3	273
Notes	277
Exercises	278
15 Partial regularity I: $\dim_{\mathbb{B}}(S) \leq 5/3$	279
15.1 Scale-invariant quantities	283
15.2 Outline of the proof	284
15.3 A first local regularity theorem in terms of u and p	291
15.4 Partial regularity I: $\dim_{\mathbb{B}}(S) \leq 5/3$	301
15.5 Lemmas for the first partial regularity theorem	304
Notes	312
Exercises	314

16	Partial regularity II: $\dim_{\mathcal{H}}(S) \leq 1$	315
16.1	Outline of the proof	316
16.2	A second local regularity theorem	321
16.3	Partial regularity II: $\mathcal{H}^1(S) = 0$	326
16.4	The Serrin condition revisited: $u \in L_t^\infty L_x^3$	329
16.5	Lemmas for the second partial regularity theorem	333
	Notes	338
	Exercises	338
17	Lagrangian trajectories	340
17.1	Lagrangian trajectories for classical solutions	342
17.2	Lagrangian uniqueness for $u_0 \in H \cap \dot{H}^{1/2}$	343
17.3	Existence of a Lagrangian flow map for weak solutions	352
17.4	Lagrangian a.e. uniqueness for suitable weak solutions	358
17.5	Proof of the inequality (17.5)	363
17.6	Proof of the borderline Sobolev embedding inequality	366
	Notes	367
	Exercises	368
Appendix A	Functional analysis: miscellaneous results	369
A.1	L^p spaces	369
A.2	Absolute continuity	370
A.3	Convolution and mollification	371
A.4	Weak L^p spaces	373
A.5	Weak and weak-* convergence and compactness	374
A.6	Gronwall's Lemma	377
Appendix B	Calderón–Zygmund Theory	378
B.1	Calderón–Zygmund decompositions	378
B.2	The Calderón–Zygmund Theorem	380
B.3	Riesz transforms	384
Appendix C	Elliptic equations	387
C.1	Harmonic and weakly harmonic functions	387
C.2	The Laplacian	388
Appendix D	Estimates for the heat equation	393
D.1	Existence, uniqueness, and regularity	393
D.2	Estimates for $e^{t\Delta}\omega_0$	394
D.3	Estimates for $(\partial_t - \Delta)^{-1}f$	396

D.4	Higher regularity – Hölder estimates	400
D.5	Maximal regularity for the heat equation	403
Appendix E	A measurable-selection theorem	407
	<i>Solutions to exercises</i>	412
	<i>References</i>	457
	<i>Index</i>	467
