Preface	vii
1 An introduction to inverse problems	1
1.1 What is an ill-posed inverse problem?	1
1.2 Regularization of inverse problems	7
2 A primer on statistical methods	17
2.1 Random variables and probability distributions	17
2.1.1 Change of variable formula	23
2.2 Expectation and covariance	25
2.2.1 Median and MAD	29
2.3 Asymptotic methods	31
2.3.1 Laws of large numbers	31
2.3.2 Characteristic functions and central limit theorems .	37
2.3.3 A summary of convergence results	40
2.3.4 Basic limit theorems	43
2.4 Estimators	47
2.4.1 Point estimators	47
2.4.2 Propagation of error formula	52
2.4.3 Confidence sets	55
2.5 The multivariate Gaussian distribution	57
2.5.1 Some distributions associated with the Gaussian . .	60
2.5.2 Confidence sets for the mean of a multivariate Gaussian	62
2.6 Statistics of least-squares	67
2.6.1 Residuals for model validation	72
2.6.2 Least-squares and the pseudoinverse	74
2.7 Conditioning	75
2.7.1 Conditional expectation	79
2.7.2 Conditional independence	82
2.8 The Bayesian framework	84
2.8.1 Bayes risk	87
2.8.2 Back to Bayes' theorem	89
2.8.3 A likelihood-based class of priors	92
2.8.4 Summarizing the posterior distribution	96
2.8.5 Bayesian residuals	101
2.8.6 What is meant by "frequentist" or "Bayesian" methods?	102
2.9 The Gaussian Bayesian linear model	102
2.10 Interpretation of frequentist and Bayesian results	111

	2.10.1	Sampling interpretation	112
	2.10.2	Frequentist and Bayesian coverage	114
	2.10.3	Calibrating Bayesian procedures	119
3		Applications to inverse problems I	127
	3.1	Parametric reductions	127
	3.2	Basic characteristics of Tikhonov estimates	135
	3.3	Estimating σ and selecting λ	137
	3.4	Some simulation and approximation tools	143
	3.4.1	Approximating the trace of a large matrix	147
	3.5	Exploring the bias of Tikhonov estimates	149
	3.5.1	Exploring the bias of \hat{f}_λ	151
	3.6	Exploring the fit to the data	156
	3.7	Variance and confidence sets	160
4		Applications to inverse problems II	169
	4.1	An introduction to random elements	169
	4.1.1	Infinite-dimensional Gaussian priors	176
	4.1.2	Orthogonal expansions	180
	4.2	Parametric reductions	189
	4.3	Prior distributions for inverse problems	190
	4.3.1	Structural priors	191
	4.3.2	Priors on expansion coefficients	197
	4.4	Hierarchical and empirical Bayesian methods	199
5		A nonlinear parameter estimation problem	207
	5.1	Noise distribution	208
	5.2	Nonlinear least-squares and maximum likelihood	212
	5.2.1	Maximum Likelihood	214
	5.3	Confidence intervals without parameter estimates	216
	5.4	Bayesian inference	218
	5.4.1	Prior and posterior predictive checks	221
	5.5	Conclusions from the data analysis	222
A		Some results from analysis	225
	A.1	Banach and Hilbert spaces	225
	A.1.1	Normed spaces	225
	A.1.2	Inner product spaces	226
	A.2	Operator theory	227
	A.2.1	Continuous and bounded operators	227
	A.2.2	Adjoint operators	229
	A.2.3	Compact operators and singular systems	230
	A.3	Least-squares and operators	233
B		Conditional probability and expectation	235
		Bibliography	245
		Author Index	259
		General Index	263
