Numerical Methods for Optimal Control Problems

 Springer

Contents

A Hamilton-Jacobi-Bellman Approach for the Numerical Computation of Probabilistic State Constrained Reachable Sets.....	1
Mohamed Assellaou and Athena Picarelli	
An Iterative Solution Approach for a Bi-level Optimization Problem for Congestion Avoidance on Road Networks.....	23
Andreas Britzelmeier, Alberto De Marchi, and Matthias Gerdts	
Computation of Optimal Trajectories for Delay Systems: An Optimize-Then-Discretize Strategy for General-Purpose NLP Solvers.....	39
Simone Cacace, Roberto Ferretti, and Zahra Rafiei	
POD-Based Economic Optimal Control of Heat-Convection Phenomena.....	63
Luca Mechelli and Stefan Volkwein	
Order Reduction Approaches for the Algebraic Riccati Equation and the LQR Problem	89
Alessandro Alla and Valeria Simoncini	
Fractional PDE Constrained Optimization: Box and Sparse Constrained Problems	111
Fabio Durastante and Stefano Cipolla	
Control, Shape, and Topological Derivatives via Minimax Differentiability of Lagrangians	137
Michel C. Delfour	
Minimum Energy Estimation Applied to the Lorenz Attractor	165
Arthur J. Krener	
Probabilistic Max-Plus Schemes for Solving Hamilton-Jacobi-Bellman Equations	183
Marianne Akian and Eric Fodjo	

**An Adaptive Max-Plus Eigenvector Method for Continuous Time
Optimal Control Problems 211**
Peter M. Dower

**Diffusion Process Representations for a Scalar-Field Schrödinger
Equation Solution in Rotating Coordinates 241**
William M. McEneaney and Ruobing Zhao
