

Clara Löh

Geometric Group Theory

An Introduction

Contents

1	Introduction	1
Part I	Groups	7
2	Generating groups	9
2.1	Review of the category of groups	10
2.1.1	Abstract groups: axioms	10
2.1.2	Concrete groups: automorphism groups	12
2.1.3	Normal subgroups and quotients	16
2.2	Groups via generators and relations	19
2.2.1	Generating sets of groups	19
2.2.2	Free groups	20
2.2.3	Generators and relations	25
2.2.4	Finitely presented groups	29
2.3	New groups out of old	31
2.3.1	Products and extensions	32
2.3.2	Free products and amalgamated free products	34
2.E	Exercises	39

Part II	Groups \rightarrow Geometry	51
3	Cayley graphs	53
3.1	Review of graph notation	54
3.2	Cayley graphs	57
3.3	Cayley graphs of free groups	61
3.3.1	Free groups and reduced words	62
3.3.2	Free groups \rightarrow trees	65
3.3.3	Trees \rightarrow free groups	66
3.E	Exercises	68
4	Group actions	75
4.1	Review of group actions	76
4.1.1	Free actions	77
4.1.2	Orbits and stabilisers	80
4.1.3	Application: Counting via group actions	83
4.1.4	Transitive actions	84
4.2	Free groups and actions on trees	86
4.2.1	Spanning trees for group actions	87
4.2.2	Reconstructing a Cayley tree	88
4.2.3	Application: Subgroups of free groups are free	92
4.3	The ping-pong lemma	95
4.4	Free subgroups of matrix groups	97
4.4.1	Application: The group $SL(2, \mathbb{Z})$ is virtually free	97
4.4.2	Application: Regular graphs of large girth	100
4.4.3	Application: The Tits alternative	102
4.E	Exercises	105
5	Quasi-isometry	115
5.1	Quasi-isometry types of metric spaces	116
5.2	Quasi-isometry types of groups	122
5.2.1	First examples	125
5.3	Quasi-geodesics and quasi-geodesic spaces	127
5.3.1	(Quasi-)Geodesic spaces	127
5.3.2	Geodesification via geometric realisation of graphs	128
5.4	The Švarc–Milnor lemma	132
5.4.1	Application: (Weak) commensurability	137
5.4.2	Application: Geometric structures on manifolds	139
5.5	The dynamic criterion for quasi-isometry	141
5.5.1	Application: Comparing uniform lattices	146
5.6	Quasi-isometry invariants	148
5.6.1	Quasi-isometry invariants	148
5.6.2	Geometric properties of groups and rigidity	150
5.6.3	Functorial quasi-isometry invariants	151
5.E	Exercises	156

Part III	Geometry of groups	165
6	Growth types of groups	167
6.1	Growth functions of finitely generated groups	168
6.2	Growth types of groups	170
6.2.1	Growth types	171
6.2.2	Growth types and quasi-isometry	172
6.2.3	Application: Volume growth of manifolds	176
6.3	Groups of polynomial growth	179
6.3.1	Nilpotent groups	180
6.3.2	Growth of nilpotent groups	181
6.3.3	Polynomial growth implies virtual nilpotence	182
6.3.4	Application: Virtual nilpotence is geometric	184
6.3.5	More on polynomial growth	185
6.3.6	Quasi-isometry rigidity of free Abelian groups	186
6.3.7	Application: Expanding maps of manifolds	187
6.4	Groups of uniform exponential growth	188
6.4.1	Uniform exponential growth	188
6.4.2	Uniform uniform exponential growth	190
6.4.3	The uniform Tits alternative	190
6.4.4	Application: The Lehmer conjecture	192
6.E	Exercises	194
7	Hyperbolic groups	203
7.1	Classical curvature, intuitively	204
7.1.1	Curvature of plane curves	204
7.1.2	Curvature of surfaces in \mathbb{R}^3	205
7.2	(Quasi-)Hyperbolic spaces	208
7.2.1	Hyperbolic spaces	208
7.2.2	Quasi-hyperbolic spaces	210
7.2.3	Quasi-geodesics in hyperbolic spaces	213
7.2.4	Hyperbolic graphs	219
7.3	Hyperbolic groups	220
7.4	The word problem in hyperbolic groups	224
7.4.1	Application: "Solving" the word problem	225
7.5	Elements of infinite order in hyperbolic groups	229
7.5.1	Existence	229
7.5.2	Centralisers	235
7.5.3	Quasi-convexity	241
7.5.4	Application: Products and negative curvature	245
7.6	Non-positively curved groups	246
7.E	Exercises	250

8	Ends and boundaries	257
8.1	Geometry at infinity	258
8.2	Ends	259
8.2.1	Ends of geodesic spaces	259
8.2.2	Ends of quasi-geodesic spaces	262
8.2.3	Ends of groups	264
8.3	The Gromov boundary	267
8.3.1	The Gromov boundary of quasi-geodesic spaces	267
8.3.2	The Gromov boundary of hyperbolic spaces	269
8.3.3	The Gromov boundary of groups	270
8.3.4	Application: Free subgroups of hyperbolic groups	271
8.4	Application: Mostow rigidity	277
8.E	Exercises	280
9	Amenable groups	289
9.1	Amenability via means	290
9.1.1	First examples of amenable groups	290
9.1.2	Inheritance properties	292
9.2	Further characterisations of amenability	295
9.2.1	Følner sequences	295
9.2.2	Paradoxical decompositions	298
9.2.3	Application: The Banach–Tarski paradox	300
9.2.4	(Co)Homological characterisations of amenability	302
9.3	Quasi-isometry invariance of amenability	304
9.4	Quasi-isometry vs. bilipschitz equivalence	305
9.E	Exercises	309
Part IV	Reference material	317
A	Appendix	319
A.1	The fundamental group	320
A.1.1	Construction and examples	320
A.1.2	Covering theory	322
A.2	Group (co)homology	325
A.2.1	Construction	325
A.2.2	Applications	327
A.3	The hyperbolic plane	329
A.3.1	Construction of the hyperbolic plane	329
A.3.2	Length of curves	330
A.3.3	Symmetry and geodesics	332
A.3.4	Hyperbolic triangles	341
A.3.5	Curvature	346
A.3.6	Other models	347
A.4	An invitation to programming	349
