Preface to the first edition xi

Preface to the second and third editions xvii

1 Introduction 1

1.1 What is analysis? 1

1.2 Why do analysis? 2

2 Starting at the beginning: the natural numbers 13

2.1 The Peano axioms 15

2.2 Addition 24

2.3 Multiplication 29

3 Set theory 33

3.1 Fundamentals 33

3.2 Russell’s paradox (Optional) 46

3.3 Functions 49

3.4 Images and inverse images 56

3.5 Cartesian products 62

3.6 Cardinality of sets 67

4 Integers and rationals 74

4.1 The integers 74

4.2 The rationals 81

4.3 Absolute value and exponentiation 86

4.4 Gaps in the rational numbers 90

5 The real numbers 94

5.1 Cauchy sequences 96

5.2 Equivalent Cauchy sequences 100

5.3 The construction of the real numbers 102

5.4 Ordering the reals 111

5.5	The least upper bound property	116
5.6	Real exponentiation, part I	121
6	Limits of sequences	126
6.1	Convergence and limit laws	126
6.2	The Extended real number system	133
6.3	Suprema and Infima of sequences	137
6.4	Limsup, Liminf, and limit points	139
6.5	Some standard limits	148
6.6	Subsequences	149
6.7	Real exponentiation, part II	152
7	Series	155
7.1	Finite series	155
7.2	Infinite series	164
7.3	Sums of non-negative numbers	170
7.4	Rearrangement of series	174
7.5	The root and ratio tests	178
8	Infinite sets	181
8.1	Countability	181
8.2	Summation on infinite sets	188
8.3	Uncountable sets	195
8.4	The axiom of choice	198
8.5	Ordered sets	202
9	Continuous functions on \mathbf{R}	211
9.1	Subsets of the real line	211
9.2	The algebra of real-valued functions	217
9.3	Limiting values of functions	220
9.4	Continuous functions	227
9.5	Left and right limits	231
9.6	The maximum principle	234
9.7	The intermediate value theorem	238
9.8	Monotonic functions	241
9.9	Uniform continuity	243
9.10	Limits at infinity	249
10	Differentiation of functions	251
10.1	Basic definitions	251

Contents

10.2	Local maxima, local minima, and derivatives	257
10.3	Monotone functions and derivatives	260
10.4	Inverse functions and derivatives	261
10.5	L'Hôpital's rule	264
11	The Riemann integral	267
11.1	Partitions	268
11.2	Piecewise constant functions	272
11.3	Upper and lower Riemann integrals	276
11.4	Basic properties of the Riemann integral	280
11.5	Riemann integrability of continuous functions	285
11.6	Riemann integrability of monotone functions	289
11.7	A non-Riemann integrable function	291
11.8	The Riemann-Stieltjes integral	292
11.9	The two fundamental theorems of calculus	295
11.10	Consequences of the fundamental theorems	300
A	Appendix: the basics of mathematical logic	305
A.1	Mathematical statements	306
A.2	Implication	312
A.3	The structure of proofs	317
A.4	Variables and quantifiers	320
A.5	Nested quantifiers	324
A.6	Some examples of proofs and quantifiers	327
A.7	Equality	329
B	Appendix: the decimal system	331
B.1	The decimal representation of natural numbers	332
B.2	The decimal representation of real numbers	335
	Index	339

Contents

Preface to the first edition	ix
Preface to the second and third editions	xv
1 Metric spaces	1
1.1 Definitions and examples	1
1.2 Some point-set topology of metric spaces	10
1.3 Relative topology	15
1.4 Cauchy sequences and complete metric spaces	17
1.5 Compact metric spaces	21
2 Continuous functions on metric spaces	28
2.1 Continuous functions	28
2.2 Continuity and product spaces	31
2.3 Continuity and compactness	34
2.4 Continuity and connectedness	36
2.5 Topological spaces (Optional)	39
3 Uniform convergence	45
3.1 Limiting values of functions	46
3.2 Pointwise and uniform convergence	48
3.3 Uniform convergence and continuity	53
3.4 The metric of uniform convergence	56
3.5 Series of functions; the Weierstrass M -test	58
3.6 Uniform convergence and integration	61
3.7 Uniform convergence and derivatives	63
3.8 Uniform approximation by polynomials	66
4 Power series	75
4.1 Formal power series	75
4.2 Real analytic functions	78

4.3	Abel's theorem	83
4.4	Multiplication of power series	87
4.5	The exponential and logarithm functions	90
4.6	A digression on complex numbers	93
4.7	Trigonometric functions	101
5	Fourier series	107
5.1	Periodic functions	108
5.2	Inner products on periodic functions	110
5.3	Trigonometric polynomials	114
5.4	Periodic convolutions	116
5.5	The Fourier and Plancherel theorems	121
6	Several variable differential calculus	127
6.1	Linear transformations	127
6.2	Derivatives in several variable calculus	134
6.3	Partial and directional derivatives	137
6.4	The several variable calculus chain rule	144
6.5	Double derivatives and Clairaut's theorem	147
6.6	The contraction mapping theorem	149
6.7	The inverse function theorem in several variable calculus	152
6.8	The implicit function theorem	157
7	Lebesgue measure	162
7.1	The goal: Lebesgue measure	164
7.2	First attempt: Outer measure	166
7.3	Outer measure is not additive	174
7.4	Measurable sets	176
7.5	Measurable functions	183
8	Lebesgue integration	187
8.1	Simple functions	187
8.2	Integration of non-negative measurable functions	193
8.3	Integration of absolutely integrable functions	201
8.4	Comparison with the Riemann integral	205
8.5	Fubini's theorem	207
	Index	213
