

# Transportation and Logistics

**Marvin L. Fair, Ph.D.**

Professor of Transportation Emeritus  
Formerly Director  
Transportation and Logistics Program  
The American University

**Ernest W. Williams, Jr., Ph.D.**

Graduate School of Business  
Columbia University

1981 Revised Edition

**BUSINESS PUBLICATIONS, INC.** Plano, Texas 75075  
Irwin-Dorsey Limited Georgetown, Ontario L7G 4B3

# Contents

## 1. The Transport System of the United States: Its Importance, the Saga of Its Development, Its Competition 1

Importance of Movement Capability. The American Transportation Saga: *The Beginnings. Steam-Powered Transportation (Railroads and Steamboats). The 20th-Century Competitors. Deepwater Shipping.* Modal Systems and Route Patterns. The Modern Transportation System of the United States: *Investment in U.S. Transportation.* Economic Advantages and Disadvantages of Public Enterprise in Transportation. Traffic Distribution among Modes. Developments and Portents in Transportation Technology: *Developments. Portents.* Questions for the Future.

## 2. Transport and Economic Development 21

Transformation to a Market Economy. Transport in the Infrastructure. Transport as a Generator of Economic Development. Population Movement and Regional Distribution. Choice and Location of Transport Systems. Transport and Industrial Concentration and Urbanization. Transport and the Economy: Reciprocal Relations.

## 3. Transport and Sociopolitical Development 36

Transportation and Social Institutions. Transportation and Development of Political Organization and Power. Government and Transportation. Transportation and the Socioeconomic Pattern. Transportation and the Community Pattern. Transportation in Modern Society. Transportation and Modern Social Problems. Transportation: Improvement and International Affairs.

## 4. Systems of Goods Movement: Economics of Business Logistics 51

Objectives of a Logistics System. Elements of a Movement and Distribution System. Trade-Offs in Distribution Systems. Distribution and Production Scheduling. Materials Concentration. Adjustment of Production to Demand through Inventory.

- 5. Goods Movement and the Location of Economic Enterprise** 66
- Scale of Manufacture versus Costs of Assembly and Distribution. Weight Loss and Weight Gain. Market Scope and Structure. Rate Policies Which Affect Location and Market Structure: *Effect of Rates upon the Development of Resources. Freight Rates and Industrial Location. Environmental Factors.* Competitive Rate Tactics and Location: *Transit Privileges. Rate Groups. Developing and Maintaining Competition.* Facilities and Service.
- 6. Principles of Transportation—Restated** 90
- Continuous Flow. Optimum Unit of Cargo. Maximum Vehicle Unit. Adaptation of Vehicle Unit to Volume and Nature of Traffic. Standardization. Compatibility of Unit-Load Equipment. Minimization of Deadweight to Total Weight. Maximum Utilization of Capital, Equipment, and Personnel.
- 7. Intercity Passenger Logistics** 102
- Travel in an Affluent Society. The Passenger Carriers: Domestic. Characteristics of Passenger Traffic. Factors Affecting Profitable Service. Passenger Terminals. Disappearance of Rail Service. Amtrak Takes Over. Megapolis: Urban Corridors. Coordination and National Passenger Logistics.
- 8. Urban Logistics: Human and Goods** 121
- Changes in the Pattern of Urban Development: *Urban Sprawl. Footloose Industry. Debasement of Structure. Congestion.* The Highway Approach and the Decline of Transit. The City as a Freight Terminal. Problems to be Resolved. Alternatives for the Improvement of Urban Logistics. Peaking and Peak-Period Pricing. Federal Urban Transport Program. Toward a Broader Planning Framework.
- 9. Costs and Cost Finding in Transport and Distribution** 142
- Cost Concepts: *The Supply Function. Fixed, Variable, and Total Costs. Unit Cost Behavior. Economies of Scale. Marginal Cost. Decision Costs. Readiness to Serve—Standby Costs.* Problems of Transport Costing: *The Unit of Output. Multiple Services. Assignable Costs.* Cost Finding: *Origin of Commission Formulas. Important General Characteristics. Concepts.* Other Cost Formulations. Public Costs. Economies of Scale in Transport. Relative Economy and Fitness.
- 10. Modal Cost and Service Relationships** 163
- Service Dimensions. Comparative Levels of Cost by Type of Carrier: *Rail-Motor Comparisons. Competitive Overlap and Rate Relationship. The Bulk Carriers.* Differences in Modal Cost Structures.

<b>11. Service Obligations and Liabilities of Public Carriers and Warehousemen</b>	<b>182</b>
Classes of Carriers and Their Liabilities and Service Obligations. Obligations to Serve: Common Carrier. Right to Refuse Service. Adequate Service. Liability of Warehouseman as Bailee. Liability of a Carrier as Bailee. Liability of Rail and Highway Common Carriers. Limitation of Carrier Liability: The Exceptions. Uniform Bill of Lading. Insurance Needs of Shipper Using Rail and Motor Common Carriers. Coordinate Liability of Carriers. Limiting Carrier and Warehouseman's Liability. Liability of Water Carriers. Liability of Air Carriers.	
<b>12. Freight Service for Production in Logistics Systems</b>	<b>197</b>
Economic Characteristics of Freight Service Demand. Production Freight Traffic. Requirements of Bulk Transportation Service. Adequacy. Economy (Cost). Quality of Service. Production Carriers' Services. Industry Demand and Transport Patterns. Coal. Petroleum and Petroleum Products. The Steel Industry: Iron Ore. Grain.	
<b>13. Freight Service in Physical Distribution Systems</b>	<b>216</b>
Nature of Distribution Freight Service. Importance of Distribution Freight Service. Categories of Distribution Traffic. Small Shipments Traffic. Motor Freight Services. Piggyback Service. Pool-Car Service. Forwarder Service. Express Service. Unit Load Development in Water Transportation. Air Merchandise Service. Parcel Transportation Service. Carrier Service in Distribution Systems. Summary and a Look Ahead.	
<b>14. Inventory Management, Storage, and Materials Handling</b>	<b>235</b>
Functions Ancillary to Transportation. The Functions of Storage. Inventory Management: Key to Distributive Efficiency. Components of the Distribution System. Design of Distribution Systems. The Revolution of Warehousing and Terminals. Categories of Warehouses. Warehouse Equipment. Adaptations of Public Warehousing.	
<b>15. Management, Labor, and the Efficiency of Carrier Operations</b>	<b>253</b>
<i>Differential Carrier Performance: Location and Route Pattern. Adjusting Route Pattern and Traffic Composition. Peculiarities of Carrier Management. Organization Form and Management Attitudes: Pioneers in Corporate Organization. Departmental Coordination. Absence of Profit Responsibility. Need for Quality Control. Short-Period Viewpoints. Labor-Management Relations: Multiplicity and Traditions of Unions. Management Initiative in the Adjustment to Technological Change. Negotiation of Merger Arrangements. Size, Mergers, and the Capacity to Manage. Intermodal Management.</i>	

## 16. Principles of Rate Making

277

Transport Demand: *Derived Demand. Price and Elasticity of Demand. Income Elasticity. Changes in the Economic Structure. Cross Elasticity. Measurement of Elasticity. Rate-Making Principles: Cost of Service: Competitive Rates. Standards of Cost. Common Costs. Rate-Making Principles: Value of Service: Determinants of Value of Service. Value of Service Differs among Shippers. Ability to Bear Transport Charges. Discrimination. Types of Discrimination. Monopolistic Competition in Transport Markets.*

## 17. Rate Making in Practice

301

Freight Classification and Commodity Rates: *Development of Rail Freight Classification. Exceptions and Commodity Rates. Freight Tariffs and Rate Scales and Structures: Freight Tariffs. Basic Factors of Rate Structure (Applying the Principles). Rate Structure. Equalization and Differentials. Tariff Computerization. Appendix: Glossary of Terms.*

## 18. The Management of Logistics in Industrial Firms

329

The Task: *Applying a Concept. Organization: A Tool of Management. The Organizational Form. Managing the Transport Function: Scope of Control. Rate Negotiations. Private Transport. Managing Inventory Location and Flows. Information Systems, Feedback, and Control. The State of Logistics Management. Interfaces Outside the Firm.*

## 19. Regulation of Transportation: Origin and Scope

348

Early Railroad Regulation. Early Federal Regulation. Experience with the Act of 1887. The Period of Restrictive Regulation: 1906-1917. Railroad Regulation since 1920. Expansion of the Regulatory Scheme: *Provisions of the Motor Carrier Act. Problems in the Administration of the Act. The Transportation Act of 1940. The Freight Forwarder Act of 1942. Reed-Bulwinkle Act. The Transportation Act of 1958. Department of Transportation Act of 1967. Regulation of Air Transportation. The Period of Deregulation and Aid to the Railroads: Regional Rail Reorganization Act of 1973. The Railroad Revitalization and Regulatory Reform Act of 1976. Airline Deregulation. The Motor Carrier Act of 1980. Railroad Transportation Policy Act of 1980 (Staggers Rail Act of 1980). The Great Experiment in Brief Review.*

## 20. The Control of Carrier Structure and Services

386

Carrier Structure Regulation: *Certificate Regulation: Entry, Extension, Discontinuance, Abandonment. Carrier Mergers and Consolidation: Railroad Consolidation. Motor Carrier Mergers. Airline Mergers and Control. Service Regulation: Railroad Service Regulation. Service Regulation of Motor and Air Carriers.*

<b>21. Reasonable Rates and Discrimination</b>	<b>407</b>
Reasonable Rates: <i>Valuation. Rate of Return of Class I Railroads.</i> The Causes and Importance of Discrimination: <i>Importance of Discrimination. Why Discrimination Practices Vary among the Modes.</i> Personal Discrimination: <i>Nature and Causes. Types of Personal Discrimination. Effects of Personal Discrimination. Control of Personal Discrimination.</i> Long-and-Short-Haul Discrimination: <i>Forms. Economic Results. Control of Long-and Short-Haul Discrimination.</i> Other Place and Commodity Discrimination: <i>Place Discrimination under Section 3. Export and Import Differentials. Regional Discrimination. Commodity Discrimination. Economic Effect of Other Place and Commodity Discrimination. Quantity Discounts.</i> Discrimination in Car Service: <i>Supply of Equipment. Discrimination in Air Transport.</i>	
<b>22. Coordination in Transportation</b>	<b>435</b>
<i>Intramodal Cooperation and Coordination. The Intramodal Terminal Problem. Intramodal Equipment. Intermodal Coordination: Postwar Interest in Intermodal Coordination. Recent Developments in Unit-Load System. Organization and Management of Coordination. Requirements for Advancing Intermodal Coordination. Intermodal Coordination: The Problems of Interface: Seaports. The Airport Problem. Unit-Load Systems (Containerization). Integration of Transportation. Regulation of Coordination: Intramodal Coordination. Regulation of Intermodal Coordination.</i>	
<b>23. Government Provision of Transportation Facilities</b>	<b>460</b>
Early Government Transportation Programs. Revival of Highway Improvements. Internal Waterway Improvement. Promotion of Air Transport. New Approaches—Post-World War II. User Charges. Coordination of Government Investment. Investment Project Analysis. Economics versus Politics. Conrail and Other Rail Assistance.	
<b>24. National Transportation Policy</b>	<b>483</b>
The Goal of an Optimum Transportation System. A National Transportation Policy. Basic Requirements of a More Effectual Policy: <i>Adjustment of Railroad Structure and Organization. Equity in Government Treatment of the Modes. Rationalization of Public Air. Rationalization of Regulation.</i> Division and Conflict in Public Transportation Administration. Coordination of Federal Administration. General Observations—What's Ahead.
