

Brain Structure and Its Origins

in Development and in Evolution of Behavior and the Mind

Gerald E. Schneider

The MIT Press
Cambridge, Massachusetts
London, England

Detailed Contents

Preface xxiii

PART I: INTRODUCTORY ORIENTATION 1

1 Getting Ready for a Brain Structure Primer 3

The Nature of This Book 3
Brain Space: Specifying Directions and Major Regions 5
CNS Tissue 9
Primitive Cellular Mechanisms 12
Irritability and Conduction 13
The Specialized Membrane of the Axon 15
Specializations for Irritability 19
Movement 19
Secretion 20
Synaptic Morphology and Types 21
Related Cellular Dynamics 23
Parallel Channels of Information Flow and Integrative Activity 25
Endogenous Activity 25
Readings 27

2 Methods for Mapping Pathways and Interconnections That Enable the Integrative Activity of the CNS 29

Histology and Brain Architecture 29
What Is Connected to What? 35
Tracing a Pathway from Sensory Input to the Response (S to R) 38
Pathways Seen as Bundles and Ribbons of Fibers 41
Experimental Studies Needed to Trace Connections in the Brain 41
Experimental Neuroanatomy: Tract-Tracing Methods 42
Readings 51

PART II: THE CENTRAL NERVOUS SYSTEM, FROM INITIAL STEPS TO ADVANCED CHORDATES 53

- 3 Evolution of Multicellular Organisms with Neuron-Based Coordination 55**
 - Basic Survival Skills 55
 - The First Neurons and Nerve Networks 56
 - The Nervous System in Basic Concept 58
 - Some Terminology for Brain Talk 59
 - Introducing the Simplest Chordates 60
 - Natural Selection and the Logic of Evolution 63
 - The Behavioral Demands That Changed the Neural Tube 63
 - Readings 65
- 4 Expansions of the Neuronal Apparatus of Success 67**
 - Why We Can Talk about Broad Aspects of Brain Evolution with Some Confidence 67
 - Three Enlargements Formed the Primitive Brain 67
 - Expansions of the Hindbrain 69
 - Early Forebrain Expansion Served Olfactory Functions 72
 - Midbrain Expansions, Distance Receptors, and Decussations 75
 - A Second Expansion of the Forebrain with Invasion of Non-olfactory Inputs 77
 - Concurrent Evolutionary Changes: Motor Control and Plasticity 79
 - Concurrent Evolutionary Changes: Motivational States 80
 - A Third Expansion of the Forebrain: Anticipating Events and Planning Actions 81
 - Brain Sizes Relative to Body Weight Compared for Present-Day Animals 81
 - Where We Stand in the Path to Our Goal 83
 - Readings 84

PART III: INTRODUCTION TO CONNECTION PATTERNS AND SPECIALIZATIONS IN THE EVOLVING CNS 87

- 5 The Ancestors of Mammals: Sketch of a Pre-mammalian Brain 89**
 - The “Old Chassis” for the Building of Further Additions 90
 - Subdividing the CNS 94
 - The Basic Setup: Major Types of Neurons 96
 - Sensory Channels of Conduction: Local Reflex, and Not so Local 97
 - Old Ribbons to the Brain 101
 - Ribbons to the Little Brain: The Cerebellum 103
 - Readings 106
- 6 Some Specializations Involving Head Receptors and Brain Expansions 107**
 - Electroreception and the Cerebellum 107
 - Infrared Sensors in Pit Vipers 109
 - Echolocation and the Auditory System 110
 - The Visual Systems of Primates 111
 - Whisker Fields and Barrel Fields 111
 - Other Behavioral Specializations with Corresponding Enlargements of Brain Parts 112
 - Readings 116

7 The Components of the Forebrain Including the Specialty of the Mammals: The Neocortex 117

Forebrain Removal Experiments	117
Cat Behavior after Forebrain Removal	117
Rat Behavior Is Less Drastically Affected by Forebrain Removal	118
Pigeons after Forebrain Removal, Sparing the Optic Tracts	119
Forebrain Function: A Conclusion	120
The Problem of Species Differences in Brain Lesion Effects	120
The Phenomena of Diaschisis: An Answer to the Problem	120
What Can We Conclude about Interpreting Effects of Brain Lesions?	123
Role of the Corpus Striatum	123
The Rostral End of the Brainstem Located between the Hemispheres ('Tweenbrain)	124
Limbic System of the Forebrain	125
Olfactory System Origins of Major Functions of the Limbic Endbrain	126
Overview of the Roles of Corpus Striatum and Limbic Forebrain	128
Neocortex, the Grand Innovation of the Mammals: Appearance of New Pathways	128
But What Does It Do? Why Did Neocortex Evolve?	134
Taking Stock	134
Readings	135

PART IV: DEVELOPMENT AND DIFFERENTIATION: SPINAL LEVEL 137

8 The Neural Tube Forms in the Embryo, and CNS Development Begins 139

Before There Is Any CNS	139
The Onset of a Nervous System	140
Molecules from the Notochord Induce the Formation of the Nervous System	141
The Neural Crest Gives Rise to the PNS	142
Cell Proliferation in the Early Neural Tube	143
Diversity in Neuronal Migration	145
Differentiation of the Neurons Begins	149
Notes	150
Readings	150

9 The Lower Levels of Background Support: Spinal Cord and the Innervation of the Viscera 153

Major Features of Cord Structure	153
Questions from Comparing Different Species	156
The Local Reflex Channel and the Older Lemniscal Channels	158
The Mammalian Highway for Ascending Somatosensory Information	161
Cerebellar Channel	162
The Pathways of Regulation within the Spinal Cord Itself	163
The Pathways of Influence and Control from the Brain	164
A Reminder	165
Maintaining Stability of the Internal Environment: The Autonomic Nervous System	166
Three Major Divisions of the Motor System	166
A Sketch of the Autonomic Nervous System	167
Chemical Mediation at Autonomic Nervous System Synapses	171

The Enteric Nervous System	171
Levels of Control of the Internal Environment	173
Readings	173

Intermission: The Ventricular System, the Meninges, and the Glial Cells	175
Readings	178

PART V: DIFFERENTIATION OF THE BRAIN VESICLES 179

10 Hindbrain Organization, Specializations, and Distortions	181
A Glamorized Spinal Cord	181
Vital Functions of the Hindbrain	183
Routine Maintenance Services	184
Hindbrain Participation in Mammalian Higher Functions	184
The Isodendritic Core of the Brainstem	185
Segmentation of the Hindbrain	186
Columns and Cranial Nerves	188
The Adult Hindbrain: Cell Groups and Axons of Passage	192
Somatosensory Inputs from the Face	193
The Evolution of Crossed Projections	194
Hindbrain Sensory Channels in Mammals	197
Hindbrain Specializations and Mosaic Evolution	199
Readings	204
11 Why a Midbrain? Notes on Evolution, Structure, and Functions	205
Primitive Vision	206
Primitive Olfaction	206
A Structural Consequence of the Priority of Escape Behavior for Survival	207
The Midbrain Correlation Centers	208
Outputs of Midbrain for Motor Control	210
Mosaic Evolution of Midbrain	212
Long Axons Passing through the Midbrain	212
Readings	216
12 Picturing the Forebrain with a Focus on Mammals	217
Pictures of Ancestral and Modern Endbrain	218
Words for Forebrain Parts	220
Major Structural and Functional Subdivisions of the 'Tweenbrain	220
Major Parts of the Telencephalon of Mammals	222
Origins and Course of Two Major Pathways of the Forebrain	222
The Neocortex Is Involved in Both Major Systems	224
Interim Review of Neuroanatomy	226
Segmentation of the Forebrain	227
Notes on Neocortical Origins	227
Readings	232

13	Growth of the Great Networks of Nervous Systems	235
	The Axonal Growth Cone	235
	Signals That Shape the Development of Neuronal Circuits	239
	Four Types of Chemical Guidance	244
	Two Modes of Axon Growth	247
	Formation of Maps in the Brain	247
	Plasticity in Brain Maps	249
	More Plasticity in the CNS: Collateral Sprouting	252
	Modulation of Competitive Axonal Growth Vigor	255
	Rules of Sprouting Apply to Development, with Implications for Evolutionary Change	256
	Plasticity in the Small Interneurons of the Adult Brain	256
	Structural Regression during Development and Its Purposes	257
	Axon Loss in the Damaged CNS: Is Regeneration Possible?	258
	Readings	259

PART VI: A BRIEF STUDY OF MOTOR SYSTEMS 263

14	Overview of Motor System Structure	265
	A Functional Starting Point for the Study: Three Major Types of Movement Critical for Survival	265
	Midbrain Control of the Three Types of General-Purpose Movement	266
	The Midbrain Was the Connecting Link between the Primitive Forebrain and Motor Systems	267
	Head Receptors and Locomotor Approach and Avoidance	268
	Initiation of Foraging by Activity Intrinsic to the Brain	268
	The Motor System Hierarchy	269
	Locomotor Pattern Generation and Its Adjustments by Vestibular and Cerebellar Systems	269
	Orienting of Head and Body	272
	Grasping: The Third Major Type of Movement Controlled by the Midbrain	275
	Comparative Anatomy of the Red Nucleus and Its Projection to the Spinal Cord	275
	A Structural Approach to Understanding Motor Control: Begin with the Motor Neurons	277
	The Spatial Arrangements of Somatic Motor Neurons in the Spinal Cord	278
	Readings	281
15	Descending Pathways and Evolution	283
	Axons Descending from Brain to Spinal Cord: Functional Groupings	283
	Functions of the Descending Pathways: The Corticospinal Tract	286
	Functions of the Descending Pathways: The Medial Hindbrain Tracks	287
	Functions of the Descending Pathways: The Lateral Brainstem Tracks	287
	A Conclusion with Application to Humans	289
	The Brain Disconnected from the Motor Pattern Generators	289
	Importance of the Corticospinal Tract for Innate and Learned Movements That Require Special Dexterity	290
	The Nature of the Spinal Motor Pattern Generators	291
	Motor Cortex in Phylogeny	291
	Corticospinal Projections in Phylogeny	293
	The Highest Levels of Motor Control	296
	Readings	296

16 The Temporal Patterns of Movements 299

- Three Types of Mechanism 299
- Explaining Movement Dynamics in Terms of S-R Circuits 300
- Central Programs Rather than Reflex Chaining 302
- Many Fixed Action Patterns Are Centrally Generated 302
- Reverberating Circuits within the Brain and Spinal Cord 303
- Endogenous Activity of Single CNS Neurons 304
- The Endogenous Clock 304
- How It All Works at the Circuit Level 305
- The Circuits Are Not Always Fixed 305
- How Adequate Are These Concepts? 306
- Readings 306

PART VII: BRAIN STATES 309**17 Widespread Changes in Brain State 311**

- Brain States Influenced by Widely Projecting Axon Systems 311
- Cholinergic Systems 312
- The Monoamine-Containing Systems 313
- Serotonin, Another Monoamine Neurotransmitter Influencing Behavioral State 315
- Diencephalic Origins of Other Widely Projecting Axon Systems 316
- How Many Different Brain States? 318
- Readings 320

PART VIII: SENSORY SYSTEMS 323**18 Taste 325**

- Pre-chordate Taste and Other Chemoreceptor Systems 325
- Olfaction or Taste? 326
- Visceral and Taste Inputs to the Hindbrain 326
- Innervation of the Tongue 327
- Distribution of Mammalian Taste Receptors 327
- From Tongue to Telencephalon 328
- Purposes of Taste: Routes to Motor Control 330
- Readings 331

19 Olfaction 333

- Sections through the Forebrain of Vertebrates 333
- Olfactory Bulb Projections in Primitive Vertebrates 336
- Variations in Relative Size of Olfactory Systems 338
- Olfactory Bulb Projections in Mammals 339
- Human and Small Mammalian Brains 341
- Neuronal Organization as Depicted by Ramón y Cajal 341
- The Axons of the Lateral Olfactory Tract 344
- Overview 346

	Spatial Organization of the Primary Sensory Neurons	347
	Beyond the Mitral Cells	349
	Ongoing Plasticity in the Olfactory Bulb by Cell Turnover	350
	Olfaction and Behavior	351
	Readings	352
20	Visual Systems: Origins and Functions	355
	Origins of Vision, 1: Light Detection	356
	Origins of Vision, 2: Image Formation	358
	Predator Avoidance and Escape: A Hypothesis Concerning Evolution and the Origins of Crossed Projections	359
	Orienting Toward or Around Visually Detected Objects and Other Responses	361
	The Midbrain Tectum and Orienting Toward Novel Objects, Food, or Potential Mates or Rivals	363
	Identifying Animals, Objects and Textures	364
	The Invasion of the Endbrain by Visual Pathways: Likely Evolutionary Steps in Pre-mammalian and Mammalian Ancestors	365
	More about the Third Role of Visual Images	366
	Expansions and Specializations in the Visual System	367
	Readings	369
21	Visual Systems: The Retinal Projections	371
	Two Views of the Optic Tract and Its Terminations	371
	Distortions in Large Primates	374
	How the Optic Tract Looks in the Brain of an Adult Animal	375
	Looking at the Exposed Brain from Above	380
	The Embryonic Optic Tract	381
	Midbrain Tectum: Species Differences	384
	Lamination of the Midbrain Tectum	385
	Topographic Organization of the Retinal Projection to the Midbrain Surface	385
	Notes	391
	Readings	392
22	The Visual Endbrain Structures	393
	Multiple Routes from Retina to the Endbrain	393
	The Visual System's Two Major Routes to the Endbrain in Phylogeny	395
	The Route through the Lateral Geniculate Body	397
	Early Myelination of the Optic Radiations	399
	The Brain and Neocortex in Human Development and in Phylogeny	399
	Evolutionary Multiplications of Cortical Representations of the Retina	404
	Comparing Species: Evidence for Older and Newer Visual Cortical Areas	407
	And Where Do We Go from Here?	407
	Transcortical Pathways from Visual Cortex	409
	Three Visual Pathways and Their Functions	411
	The Third Major Transcortical Pathway	412
	Comments on Transcortical Interconnections	414
	Readings	415

23 Auditory Systems 417

- Embryonic Placodes Give Rise to Auditory and Vestibular Nerves 417
- The Auditory Pathway (in Brief) 418
- Some Special Functions of the Auditory System: Antipredator Behaviors 418
- Aversiveness of Noise and the Role of the Limbic System 419
- Learned Fear: Importance of the Forebrain 420
- Predation Had Other Requirements: Identifying and Localizing Prey Animals 421
- Transformations of Sound Vibrations in Middle Ear and Cochlea 423
- Evolution of Jaw Bones of Ancestral Reptiles into the Ossicles of the Middle Ear in Mammals 424
- Mammalian Ear Structures and Dynamics 425
- Initial Coding of Information 426
- The Flow of Auditory Information in the CNS 428
- Terminations of the Auditory Nerve 428
- Thalamic Projections Carry Auditory Information to the Limbic System and to Neocortex 430
- Review: Multiple Routes Carrying Auditory Information to the Forebrain 430
- Distinct Pathways for Two Major Functions: Orienting and Identification 431
- Location Specificity Arises in Cells of the Hindbrain's Trapezoid Body 431
- How Direction Can Be Derived from Precise Time-of-Arrival at the Two Ears 432
- A Second Hindbrain Mechanism for Sound Localization 434
- How Did This Spatial Localization Apparatus of the Hindbrain Evolve? 434
- Judging a Sound's Direction in the Vertical Axis 434
- Location Information Reaches the Midbrain's Superior Colliculus 434
- Location Information Also Reaches the Endbrain 435
- The Second Function of Ascending Auditory Pathways: Pattern Identification 435
- Temporal Pattern Selectivity: Examples 438
- Functionally Distinct Auditory Pathways in the Neocortex 440
- Auditory System Specializations 442
- Readings 445

PART IX: THE FOREBRAIN AND ITS ADAPTIVE PRIZES: A SNAPSHOT 447**24 Forebrain Origins: From Primitive Appendage to Modern Dominance 449**

- Life without a Forebrain 449
- In Search of Ideas about Origins: Primitive Forebrains 450
- Brain Expansions in the Vertebrates 452
- More about the Early Forebrain 456
- The Scene Is Set for the Early Expansion of the Striatum 456
- Another Kind of Plasticity in the Primitive Endbrain 457
- Parallel Evolution of Pallium and Subpallium 459
- Visualizing the Early Striatum and Pallium 460
- Next Steps into the Forebrain 463
- Readings 463

PART X: THE HYPOTHALAMUS AND LIMBIC SYSTEM 465

- 25 Regulating the Internal Milieu and the Basic Instincts 467**
 Nature of the Hypothalamus and Affiliated Structures: The Limbic System 467
 Approaching the Limbic System from Below: Two Kinds of Arousal from the Midbrain 468
 Autonomic and Endocrine Functions of the Hypothalamus 470
 Homeostatic Regulation of the Internal Milieu 472
 Regulation of Cyclic and Episodic Behaviors 473
 The Center of Motivational State Control 474
 Distinguishing between Appetitive and Consummatory Behaviors Involved in a Drive 474
 Computational Neuroethology 475
 Hunger, Feeding, and Brain Circuits 476
 Electrically Elicited Drive States 476
 Connections with Other Systems 478
 Drive and Reward Involve Distinct Axon Populations in the Medial Forebrain Bundle 479
 Readings 479
- 26 Core Pathways of the Limbic System, with Memory for Meaningful Places 483**
 Cell Groups in the Hypothalamus 483
 Feedback from Visceral Afferents and from Blood Chemistry 484
 Limbic System Interconnections within the Forebrain: The Circuit of Papez 486
 Why the Revival of Interest in This Circuit? 490
 Visualizing the Circuit of Papez 490
 What Is the Functional Significance of the Return Pathway? 492
 Place Memories in the Neuronal Pathways of Feeling and Emotion 493
 Review of Structures in the Limbic System 493
 A Variety of Ways the Hypothalamus Sends Its Influences to the Neocortex 494
 Mental State and the Hypothalamus 497
 Influence of the Hypothalamus on the Brainstem and Spinal Cord 497
 Review 498
 Functional Specificity in the Limbic Midbrain 498
 Readings 499
- 27 Hormones and the Shaping of Brain Structures 501**
 Sex Differences in the Human CNS: Evidence from Pathologies 502
 What Determines an Individual's Sexual Orientation? 502
 Hormone Peaks and Brain Differentiation 503
 More Sex Differences in the CNS 504
 Sexual Dimorphism Underlying Singing in the Canary and Other Songbirds 506
 "A Brain for All Seasons" 507
 How Many More Sex Differences in the Brain Will Be Found? 508
 Back to the Anatomy of the Limbic System 510
 Readings 511

28 The Medial Pallium Becomes the Hippocampus 513

- Evidence of an Internal Map: Place Cells 513
- Head-Direction Cells and the Circuit of Papez 515
- Thoughts about the Origins of the Medial Pallium 517
- The Expansion of the Pallium, with a Focus on the Medial Pallium 518
- Cells and Circuits of Ammon's Horn (*Cornu Ammonis*) 520
- Further Notes on Hippocampal Anatomy 520
- Major Connections between the Mammalian Hippocampus and Neocortex 523
- Local Circuits within the Hippocampus 527
- Memory and the Hippocampus 527
- Subcortical Projections to and from the Hippocampus 528
- Anatomical Plasticity in the Hippocampus 529
- Brain States and Memory Consolidation during Sleep 531
- Readings 533

29 The Limbic Striatum and Its Outpost in the Temporal Lobe 537

- A Brain System of Forebrain and Midbrain Underlying Motivation, Emotion, and Autonomic Regulation 537
- What Is the Amygdala? 539
- The Stria Terminalis: A Major Output of the Amygdala 542
- Sensory Pathways to the Amygdala 542
- Amygdala Connections with Systems of Higher Cognitive Functions 545
- Behavioral Change Caused by Artificial Activation of the Amygdala 545
- Behavioral Change after Amygdala Lesions 547
- How Sounds That Warn of Danger Come to Cause Fear and Avoidance 547
- The More Rostrally Located Ventral Striatum, in the "Basal Forebrain" 548
- Disordered Functions of the Limbic System 551
- Other Behavioral Difficulties in People Are Tied to Amygdala Functions 554
- Central Roles of Basal Forebrain and Amygdala for Learned Affects 556
- Readings 557

PART XI: CORPUS STRIATUM 559**30 The Major Subpallial Structure of the Endbrain 561**

- Beginnings: A Link between Olfactory Inputs and Motor Control 561
- Non-olfactory Inputs Invade the Striatum 562
- Visualizing the Striatum and Other Major Structures in the Cerebral Hemisphere 564
- Major Outputs of the Mammalian Endbrain: The Position of the Striatum 564
- Simplified Pictures of Dorsal Striatal Connections 568
- Diaschisis after Loss of Inhibitory Connections 571
- The Striatal Satellites Add Complexity to the System 573
- Neocortex Dominates the Inputs to Dorsal Striatum of Large Mammals 574
- Topography in the Ventral Striatum 575
- Complex Chemoarchitecture of the Striatum 578
- Compartmental Organization within the Striatal System 578
- Finding the Corpus Striatum in Large Mammalian Brains 580
- Overview 580
- Readings 582

31	Lost Dopamine Axons: Consequences and Remedies	583
	Fetal Nigral Tissue Transplantation Initiated as a Therapy for Parkinson's Disease	583
	Initial Promise of Transplant Treatments	585
	Deep Brain Stimulation or Selective Surgical Lesions in Advanced Parkinson's Disease	585
	Additional Alternative Treatments	586
	Readings	588
	 Intermission: Neurogenesis in Mature Brains	 589
	Readings	590

PART XII: THE CROWN OF THE MAMMALIAN CNS: THE NEOCORTEX 593

32	Structural Origins of Object Cognition, Place Cognition, Dexterity, and Planning	595
	The Primitive Olfactory Functions of Endbrain: Identification of Object and Place	595
	The Advantages and Consequences of Non-olfactory Inputs to the Endbrain	597
	In Mammals, Why Did Neocortex Evolve Rather than Wulst?	597
	The Orderly Architecture of Neocortex Illustrated by the Human Brain	598
	Basic Sensorimotor Functions of Neocortex	601
	Functional Regions Based on the Early Evolution of Place Cognition and Object Cognition	601
	Sensory Cortex That Led to the Evolution of Fine Motor Control	603
	Anticipation as a Major Innovation of the Neocortex	603
	Origins of Planning	604
	Neocortex as Anticipator and Planner: Illustrative Evidence	604
	Endbrain Evolution: Suggested Major Steps Reviewed and Extended	605
	Expansions of Neocortical Areas	609
	Evolutionary Changes in Thalamocortical Axon Trajectories	611
	Readings	614
 33	 Basic Neocortical Organization: Cells, Modules, and Connections	 617
	Two Major Types of Neocortical Neuron	617
	The Major Morphological Characteristics of the Neocortex	617
	Modules of the Neocortex: Areas and Columns	619
	Cortical Types and Variations	623
	Connections of the Neocortical Modules	624
	Convergence of Inputs, Great and Small	626
	Expansions of the Neocortex Reviewed	627
	Axons to and from Neocortex	627
	Ascending Pathways to Neocortex Go Mainly through the Thalamus: The Basic Pattern	628
	Illustrations of Thalamocortical Connections: Human Brain	629
	Illustrations of Thalamocortical Connections: Brain of Small Rodent or Insectivore	633
	Transcortical Association Fibers	634
	Comparative Neocortical Anatomy from a Moscow Perspective	639
	Studies of Development and Plasticity Lend Support to Classifications of Major Neocortical Types	640
	Review of Ideas on Thalamic Evolution	642
	Readings	643

34	Structural Change in Development and in Maturity	645
	Neuronal Proliferation	645
	Neocortical Expansion in Development and in Evolution	646
	When Cortical Cells Are Born and How They Migrate	650
	How Do Distinct Cortical Areas Become Specified in Development?	652
	The Role of Activity in the Development of Neocortical Connections	654
	Apparent Shaping of Thalamocortical Projections by Abnormal Activity	656
	How Does Activity Affect Axons and Their Connections?	656
	Altered Neocortical Structure after Early Blindness	659
	Alteration of Receptive Fields by Repetitive Stimulation in <i>Adult Somatosensory Cortex</i>	660
	Review: Where Are the Engrams?	663
	Is Everything Plastic?	664
	Conclusions about the Neocortex	664
	Posterior (Postcentral) Portions of the Hemisphere	664
	Rostral (Frontal) Portions of the Hemisphere	665
	Brain State Changes Can Alter the Processes of Both Posterior and Frontal Portions of the Neocortex	665
	The Study of Brain Structure and Its Origins Lays the Groundwork for Understanding the Underpinnings of Behavior and Mental Abilities	666
	Readings	666
	Figure Credits	669
	Index	679

Figure Credits

Chapter 1. Getting Ready for a Brain Structure Primer

1.1A & 1.2A Based on Butler, A. B., & Hodos, W. (2005). *Comparative vertebrate Neuroanatomy: Evolution and adaptation*, 2nd ed. Hoboken, NJ: John Wiley & Sons. **1.4 (left)** From Herrick, C. J. (1922). *An introduction to neurology*, 3rd ed. Philadelphia and London: W. B. Saunders. **1.4 (right)** Photo courtesy of Prof. Robert Kretz at the Department of Medicine/Anatomy of the University of Fribourg, Switzerland. **1.7** Adapted from Ramón y Cajal, S. (1989). *Recollections of my life*. Translated by E. Horne Craigie. Cambridge, MA: The MIT Press. **1.8** From the Cajal Institute, Madrid. **1.11** From Becker, J. B., Breedlove, S. M., Crews, D., & McCarthy, M., eds. (2002). *Behavioral endocrinology*, 2nd ed. Cambridge, MA: The MIT Press. **1.12** Adapted from Breedlove, S. M., Rosenzweig, M. R., & Watson, N. V. (2007). *Biological psychology: An introduction to behavioral, cognitive, and clinical neuroscience*, 5th ed. Sunderland, MA: Sinauer Associates. **1.14** Adapted from Keeton, W. T. (1976). *Biological science*, 3rd ed. New York: W. W. Norton.

Chapter 2. Methods for Mapping Pathways and Interconnections That Enable the Integrative Activity of the CNS

2.1 Adapted from Breedlove, S. M., Rosenzweig, M. R., & Watson, N. V. (2007). *Biological psychology: An introduction to behavioral, cognitive, and clinical neuroscience*, 5th ed. Sunderland, MA: Sinauer Associates. **2.2** From Swanson, L. W. (1992). *Brain maps: Structure of the rat brain*. Amsterdam: Elsevier Science. **2.3** From Brodmann, K. (1999). *Localisation in the cerebral cortex*. Translated with editorial notes and an introduction by Laurence J. Garey. London: Imperial College Press. Original: Brodmann, K. (1909). *Vergleichende Lokalisationslehre der Grobhirnrinde*. Leipzig: Verlag von Johann Ambrosius Barth. **2.4A** From Nolte, J., & Angevine, J. B. (2007). *The human brain in photographs and diagrams*, 3rd ed. St. Louis: Mosby. **2.4B** From Jhaveri, S., Erzurumlu, R. S., Friedman, B. & Schneider, G. E. (1992). Oligodendrocytes and myelin formation along the optic tract of the developing hamster: An immunohistochemical study using the Rip antibody. *Glia* 6, 138–148. **2.5** Adapted from Flechsig, P. (1920). *Anatomie des menschlichen Gehirns und Rückenmarks auf myelogenetischer Grundlage*. Leipzig: Georg Thieme. **2.6** Graybiel, A. M. (1978). A stereometric pattern of distribution of acetylthiocholinesterase in the deep layers of the superior colliculus. *Nature*, 272, 539–541. **2.7 (left)** From Karten, H. J., & Dubeldam, J. L. (1973). The organization and projections of the paleostriatal complex in the pigeon (*Columba livia*). *Journal of Comparative Neurology*, 148 (1), 61–89. **2.7 (right)** From MacLean, P. D. (1972). Cerebral evolution and emotional processes: New findings on the striatal complex. *Annals of the New York Academy of Sciences*, 193, 137–149. **2.8A** From Herkenham, M., & Pert, C. B. (1982). Light microscopic localization of brain opiate receptors: A general autoradiographic method which preserves tissue quality. *Journal of Neuroscience*, 2 (8), 1129–1149. **2.8B** From Lein, E. S., et al. (2007). Genome-wide atlas of gene expression in the adult mouse brain. *Nature*, 445, 168–176. **2.9** From Glaser, E. M., & Van der Loos, H. (1981). Analysis of thick brain sections by obverse-reverse computer microscopy: Application of a new, high clarity Golgi-Nissel stain. *Journal of Neuroscience Methods*, 4, 117–125. **2.10, 2.11, and 2.12** From Ramón y Cajal, S. (1995). *Histology of the nervous system of man and vertebrates*. Translated from the French by Neely Swanson and Larry W. Swanson. New York: Oxford University Press. **2.13** Photo courtesy of Haring Nauta. **2.20** Jellison, B. J., Field, A. S., Medow, J., Lazar, M.,

Salamat, M. S., & Alexander, A. L. (2004). Diffusion tensor imaging of cerebral white matter: A pictorial review of physics, fiber tract anatomy, and tumor imaging patterns. *American Journal of Neuroradiology*, 25, 356–369.

Chapter 3. Evolution of Multicellular Organisms with Neuron-Based Coordination

3.1A Mackie, G. O. (1970). Neuroid conduction and the evolution of conducting tissues. *Quarterly Review of Biology*, 45 (4), 319–332. **3.1B** Based on Nauta, W. J. H., & Feirtag, M. (1986). *Fundamental neuroanatomy*. New York: W. H. Freeman. **3.3** Based on Striedter, G. F. (2005). *Principles of brain evolution*. Sunderland, MA: Sinauer Associates. **3.5** Based on Wicht, H., & Lacalli, T. C. (2005). The nervous system of amphioxus: structure, development, and evolutionary significance. *Canadian Journal of Zoology*, 83, 122–150.

Chapter 4. Expansions of the Neuronal Apparatus of Success

4.3, 4.4, 4.5, and 4.6 Based on Herrick, C. J. (1962) *Neurological foundations of animal behavior*. New York: Hafner Publishing Company. (Reprint of 1903 original.) **4.8B** From Schroeder, D. M. (1980). The telencephalon of teleosts. In Ebbesson, S. O. E., ed. *Comparative neurology of the telencephalon*. New York: Plenum Press. **4.11** Based on Striedter, G. F. (2005). *Principles of brain evolution*. Sunderland, MA: Sinauer Associates. Originally from Jerison, H. J. (1973). *Evolution of the brain and intelligence*. New York: Academic Press. **4.12** Based on Striedter, G. F. (2005). *Principles of brain evolution*. Sunderland, MA: Sinauer Associates. Data from several earlier studies.

Chapter 5. The Ancestors of Mammals: Sketch of a Pre-mammalian Brain

5.2 From Haeckel, E. H. P. A. (1897). *The evolution of man*. New York: D. Appleton & Company. Courtesy of the Wellcome Institute. **5.3** Procynosuchus and Cynognathus courtesy of Nobumichi Tamura. **5.8** From Herrick, C. J. (1922). *An introduction to neurology*, 3rd ed. Philadelphia and London: W. B. Saunders. **5.9** Based on Breedlove, S. M., Rosenzweig, M. R., & Watson, N. V. (2007). *Biological psychology: An introduction to behavioral, cognitive, and clinical neuroscience*, 5th ed. Sunderland, MA: Sinauer Associates. **5.11** Based on Striedter, G. F. (2005). *Principles of brain evolution*. Sunderland, MA: Sinauer Associates.

Chapter 6. Some Specializations Involving Head Receptors and Brain Expansions

6.1 Based on Friedman, M. A., & Hopkins, C. D. (1998). Neural substrates for species recognition in the time-coding electrosensory pathway of mormyrid electric fish. *Journal of Neuroscience*, 18 (3), 1171–1185. **6.2** Based on Butler, A. B., & Hodos, W. (2005). *Comparative vertebrate neuroanatomy: Evolution and adaptation*, 2nd ed. New York: John Wiley & Sons. **6.3** Based on Striedter, G. F. (2005). *Principles of brain evolution*. Sunderland, MA: Sinauer Associates. **6.4** Based on Allman, J. M. (2000). *Evolving brains*. Scientific American Library. New York: W. H. Freeman. **6.5A** From Woolsey, T. A., & Van der Loos, H. (1970). The structural organization of layer IV in the somatosensory region (S I) of mouse cerebral cortex: The description of a cortical field composed of discrete cytoarchitectonic units. *Brain Research*, 17 (2), 205–242. **6.5B** Photo courtesy of S. Jhaveri. **6.6** Adapted from Allman, J. M. (2000). *Evolving brains*. Scientific American Library. New York: W. H. Freeman. **6.7** Adapted from Ulinski, P. S. (1984). Thalamic projections to the somatosensory cortex of the echidna, *Tachyglossus aculeatus*. *Journal of Comparative Neurology*, 229, 153–170.

Chapter 8. The Neural Tube Forms in the Embryo, and CNS Development Begins

8.1 and 8.2 Based on Wolpert, L. (1991). *The triumph of the embryo*. New York: Oxford University Press. **8.4** Based on Brodal, P. (2004). *The central nervous system: Structure and function*, 3rd ed. New York: Oxford University Press. **8.5** Based on Breedlove, S. M., Rosenzweig, M. R., & Watson, N. V. (2007). *Biological psychology: An introduction to behavioral, cognitive, and clinical neuroscience*, 5th ed. Sunderland, MA: Sinauer Associates.

8.7 Based on McConnell, S. K. (1995). Constructing the cerebral cortex: Neurogenesis and fate determination. *Neuron*, 15 (4), 761–768. **8.8, 8.9, and 8.11** From Ramón y Cajal, S. (1995). *Histology of the nervous system of man and vertebrates*. Translated from the French by N. Swanson & L. W. Swanson. New York and Oxford: Oxford University Press. **8.10** From Domesick, V. B., & Morest, D. K. (1977). Migration and differentiation of shepherd's crook cells in the optic tectum of the chick embryo. *Neuroscience*, 2 (3), 477–491.

Chapter 9. The Lower Levels of Background Support: Spinal Cord and the Innervation of the Viscera

9.1 Based on Truex, R. C., & Carpenter, M. B. (1964). *Strong and Elwyn's human neuroanatomy*, 5th ed. Baltimore: Williams and Wilkins. **9.2 and 9.3** From Rexed, B. (1954). A cytoarchitectonic atlas of the spinal cord in the cat. *Journal of Comparative Neurology*, 100 (2), 297–379. **9.4** From Gibson, S. J. (1981). The distribution of nine peptides in rat spinal cord with special emphasis on the substantia gelatinosa and on the area around the central canal (lamina X). *Journal of Comparative Neurology*, 201 (1), 65–79. **9.5** Based on Per Brodal, (2004) *The central nervous system: structure and functioning*, 3rd ed. New York: Oxford University Press. **9.9** Based on Nauta, W. J. H., & Feirtag, M. (1986). *Fundamental neuroanatomy*. New York: W. H. Freeman. **9.11** Based on Brodal, P. (2004). *The central nervous system: Structure and function*, 3rd ed. New York: Oxford University Press, and others. **9.12** Based on Swanson, L. W. (2003). *Brain architecture: Understanding the basic plan*. New York: Oxford University Press.

Intermission: The Ventricular System, the Meninges, and the Glial Cells

9a.1 Based on Le Gros Clark, W. E. (1976). Central nervous system. In Hamilton, W. J., ed. *Textbook of human anatomy*, 2nd ed. New York: Macmillan. **9a.2** Based on Brodal, P. (1998). *The central nervous system: Structure and function*, 2nd ed. New York: Oxford University Press.

Chapter 10. Hindbrain Organization, Specializations, and Distortions

10.1, 10.9, and 10.11 Based on Nauta, W. J. H., & Feirtag, M. (1986). *Fundamental neuroanatomy*. New York: W. H. Freeman. **10.3 and 10.5** From Scheibel, M. E., & Scheibel, A. B. (1958). Structural substrates for integrative patterns in the brainstem reticular core. In Jasper, H. H. et al., eds. *Reticular formation of the brain*. Boston: Little Brown. **10.7** From Lumsden, A., & Krumlauf, R. (1996). Patterning the vertebrate neuraxis. *Science*, 274, 1109–1115. **10.8** From Wolpert, L., Jessell, T., Lawrence, P., Meyerowitz, E., Robertson, E., & Smith, J. (2007). *Principles of development*, 3rd ed. New York: Oxford University Press. Photographs by Alex P. Gould. **10.20** From Nolte, J., & Angevine, J. B., Jr. (1995). *The human brain: In photographs and diagrams*. St. Louis: Mosby.

Chapter 11. Why a Midbrain? Notes on Evolution, Structure, and Functions

11.4 Based on lectures by W. J. H. Nauta at MIT in his class “Outline of Neuroanatomy” in the late 1960s.

Chapter 12. Picturing the Forebrain with a Focus on Mammals

12.2 Based on Fernandez, A. S., Pieau, C., Reperant, J., Boncinelli, E., & Wassef, M. (1998). Expression of the Emx-1 and Dlx-1 homeobox genes define three molecularly distinct domains in the telencephalon of mouse, chick, turtle and frog embryos: Implications for the evolution of telencephalic subdivisions in amniotes. *Development*, 125, 2099–2111. **12.8** Based on Striedter, G. F. (2005). *Principles of brain evolution*. Sunderland, MA: Sinauer Associates. **12.9** From Reiner, A., Yamamoto, K., & Karten, H. J. (2005). Organization and evolution of the avian forebrain. *The Anatomical Record Part A*, 287A, 1080–1102. **12.10** Adapted from Welagen, J., & Anderson, S. (2011). Origins of neocortical interneurons in mice. *Developmental Neurobiology*, 71, 10–17. **12.11** From Rakic, P. (2009). Evolution of the neocortex: A perspective from developmental biology. *Nature Reviews Neuroscience* 10, 724–735.

Chapter 13. Growth of the Great Networks of Nervous Systems

13.1 From Ramón y Cajal, S. (1899). *Recollections of my life*. Cambridge, MA: The MIT Press. **13.2a** From Wessells, N. K., & Nottall, R. P. (1978). Normal branching, induced branching, and steering of cultured parasympathetic motor neurons. *Experimental Cell Research*, 115, 111–122. **13.2b** From Bray, D., & Chapman, K. (1985). Analysis of microspike movements on the neuronal growth cone. *Journal of Neuroscience*, 5 (12), 3204–3213. **13.3** Based on Lin, C.-H., Thompson, C. A., & Forscher, P. (1994). Cytoskeletal reorganization underlying growth cone motility. *Current Opinion in Neurobiology*, 4 (5), 640–647. **13.4** From Levi-Montalcini, R. (1964). Growth control of nerve cells by a protein factor and its antiserum. *Science*, 143, 105–110. **13.5** From Bentley, D., & Caudy, M. (1983). Pioneer axons lose directed growth after selective killing of guidepost cells. *Nature*, 304, 62–65. **13.7** From Hibbard, E. (1965). Orientation and directed growth of Mauthner's cell axons from duplicated vestibular nerve roots. *Experimental Neurology*, 13, 289–301. **13.8** Based on Tessier-Lavigne, M., & Goodman, C. S. (1996). The molecular biology of axon guidance. *Science*, 274 (5290) 1123–1133. **13.9a, 13.14, 13.15, and 13.16** Based on Jhaveri, S., Schneider, G. E., & Erzurumlu, R. S. (1991). Axonal plasticity in the context of development. In: Cronly-Dillon, J. R., ed. *Development and plasticity of the visual system* (Vision and Visual Dysfunction, vol. 11, pp. 232–256); Devor, M., & Schneider, G. E. (1975). Neuroanatomical plasticity: the principle of conservation of total axonal arborization. *Aspects of Neural Plasticity*, 43, 191–200. London: Macmillan Press. **13.9b** Courtesy of Michael P. Stryker, UCSF. **13.10** From O'Leary, D. D. M., Yates, P. A., & McLaughlin, T. (1999). Molecular development of sensory maps: Representing sights and smells in the brain. *Cell*, 96 (2), 255–269. **13.11** Finlay, B. L., Schneps, S., & Schneider, G. E. (1979). Orderly compression of the retinotectal projection following partial tectal ablation in the newborn hamster. *Nature* 280, 153–155. **13.12** From Schneider, G. E. (1973). Early lesions of superior colliculus: Factors affecting the formation of abnormal retinal projections. *Brain, Behavior and Evolution*, 8, 73–109.

Chapter 14. Overview of Motor System Structure

14.1 Based on Orlovskii, G. N. (1970). On the connections of reticulospinal neurons with the “locomotor regions” of the brainstem. *Biofizika*, 15, 171–177. **14.2, 14.9, and 14.10** Based on Swanson, L. R. (2012). *Brain architecture: Understanding the basic plan*, 2nd ed. New York: Oxford University Press. **14.4** Based on Nauta, W. J. H., & Feirtag, M. (1986). *Fundamental neuroanatomy*. New York: W. H. Freeman. **14.5** From Goodlett, C. R. (2008). The cerebellum. In Conn, P. M., ed. *Neuroscience in medicine* (pp. 221–245). Totowa, NJ: Humana Press. **14.6** Based on Brodal, P. (2004). *The central nervous system: Structure and function*, 3rd ed. New York: Oxford University Press. **14.7** Based on Massion, J. (1988). Red nucleus: Past and future. *Behavioural Brain Research*, 28, 1–8. **14.8** Figure based on Striedter, G. F. (2005). *Principles of brain evolution*. Sunderland, MA: Sinauer Associates; and on three experimental studies by others in 1981 and 1982. **14.11** From Lawrence, D. G., & Kuypers, H. G. J. M. (1968). The functional organization of the motor system in the monkey II: The effects of lesions of the descending brain-stem pathways. *Brain*, 91 (1), 15–36.

Chapter 15. Descending Pathways and Evolution

15.1 From Lawrence, D. G., & Kuypers, H. G. J. M. (1968). The functional organization of the motor system in the monkey II: The effects of lesions of the descending brain-stem pathways. *Brain*, 91, (1), 15–36. **15.5** Shoham, S., Halgren, E., Maynard, E. M., & Normann, R. A. (2001). Motor-cortical activity in tetraplegics. *Nature*, 413, 793. **15.6** Based on the following: Virginia opossum: Lende, R. A. (1963). Cerebral cortex: A sensorimotor amalgam in the marsupial. *Science*, 141 (3582), 730–732. Brush-tailed possum: Haight, J. R., & Neylon, L. (1978). The organization of neocortical projections from the ventroposterior thalamic complex in the marsupial brush-tailed possum, *Trichosurus vulpecula*: A horseradish peroxidase study. *Journal of Anatomy*, 126 (3) 459–485; and Haight, J. R., & Neylon, L. (1979). The organization of neocortical projections from the ventrolateral thalamic nucleus in the brush-tailed possum, *Trichosurus vulpecula*, and the problem of motor and sensory convergence within the mammalian brain. *Journal of Anatomy*, 129 (4), 673–694. Rat: Donoghue, J. P., & Wise, S. P. (1982). The motor cortex of the rat: Cytoarchitecture and microstimulation mapping. *Journal of Comparative Neurology*, 212 (1), 76–88. Galago: Kaas, J. H. (2004). Evolution of somatosensory and motor cortex in primates. *The Anatomical Record Part A*, 281A (1), 1148–1156. **15.7** Adapted from Nudo, R. J., & Masterton, R. B. (1990). Descending pathways to the spinal cord, III: Sites of origin of the corticospinal tract. *Journal of Comparative Neurology*,

296 (4), 559–583. **15.8** From Rathelot, J.-A., & Strick, P. L. (2009). Subdivisions of primary motor cortex based on cortico-motoneuronal cells. *PNAS*, 106, 918–923.

Chapter 16. The Temporal Patterns of Movements

16.1 Based on the description in Tinbergen, N. (1951). *The study of instinct*. Oxford: Clarendon Press.

Chapter 17. Widespread Changes in Brain State

17.2 (upper left) Levitt, P., & Moore, R. Y. (1978). Noradrenaline neuron innervation of the neocortex in the rat. *Brain Research*, 139, 219–231. **17.2 (lower)** Modified from Moore, R. Y., & Bloom, F. E. (1979). Central catecholamine neuron systems: Anatomy and physiology of the norepinephrine and epinephrine systems. *Annual Review of Neuroscience*, 2, 113–168. **17.3** Modified from Björklund, A., & Dunnett, S. B. (2007). Dopamine neuron systems in the brain: An update. *Trends in Neurosciences*, 30, 194–202. **17.4** From Heimer, L. (1995). *The human brain and spinal cord: Functional neuroanatomy and dissection guide*, 2nd ed. New York: Springer-Verlag. **17.5** From Törk, I. (1990). Anatomy of the serotonergic system. *Annals of the New York Academy of Sciences*, 600, 9–34. **17.6** From Baldo, B. A., Daniel, R. A., Berridge, C. W., & Kelley, A. E. (2003). Overlapping distributions of orexin/hypocretin- and dopamine-hydroxylase immunoreactive fibers in rat brain regions mediating arousal, motivation, and stress. *Journal of Comparative Neurology*, 464, 220–237.

Chapter 18. Taste

18.1 and 18.2 Based on Zigmond, M. J., Bloom, F. E., Lands, S. C., Roberts, J. L., & Squire, L. R. (1999). *Fundamental neuroscience*. New York: Academic Press.

Chapter 19. Olfaction

19.1 Based on Herrick, C. J. (1933). The functions of the olfactory parts of the cerebral cortex. *PNAS*, 19, 7–14. **19.5** Based on Polenova, O. A., & Vesselkin, N. P. (1993). Olfactory and nonolfactory projections in the river lamprey (*Lampetra fluviatilis*) telencephalon. *Journal für Hirnforschung*, 34, (2), 261–279. **19.6** From Wicht, H., & Northcutt, R. G. (1993). Secondary olfactory projections and pallial topography in the pacific hagfish, *Eptatretus stouti*. *Journal of Comparative Neurology*, 337, 529–542. **19.7** From Striedter, G. F. (2005). *Principles of brain evolution*. Sunderland, MA: Sinauer Associates. **19.8** From Heimer, L. (1995) *The human brain and spinal cord: Functional neuroanatomy and dissection guide*, 2nd ed. New York: Springer-Verlag. **19.9** Based on Parker, C. A. (1906). *A guide to diseases of the nose and throat and their treatment*. London: Edward Arnold; and on other sources including studies of nasal air flow. **19.10** Based on Heimer, L. (1995). *The human brain and spinal cord: Functional neuroanatomy and dissection guide*, 2nd ed. New York: Springer-Verlag. **19.11, 19.12, 19.13 and 19.15** From Ramón y Cajal, S. (1995). *Histology of the nervous system of man and vertebrates*. Translated from the French by N. Swanson & L. W. Swanson. New York: Oxford: Oxford University Press. **19.14** From Haberly, L. B. (2001). Parallel-distributed processing in olfactory cortex: New insights from morphological and physiological analysis of neuronal circuitry. *Chemical Senses*, 26 (5), 551–576. **19.16** From Mori, K., Nagao, H., & Yoshihara, Y. (1999). The olfactory bulb: Coding and processing of odor molecule information. *Science*, 286, 711–715.

Chapter 20. Visual Systems: Origins and Functions

20.1 From Ling, C., Jhaveri, S. & Schneider, G. E. (1998). Target-specific morphology of retinal axon arbors in the adult hamster. *Visual Neuroscience*, 15, 559–579. **20.5** Based on Finlay, B. L., Schneps, S. E., Wilson, K. G., & Schneider, G. E. (1978). Topography of visual and somatosensory projections to the superior colliculus of the golden hamster. *Brain Research*, 142, 223–235; and on Frost, D. O., & Schneider, G. E (1979). Plasticity of retinofugal projections after partial lesions of the retina in newborn Syrian hamsters. *Journal of Comparative Neurology*, 185, 517–567; using results also from S. Jhaveri. **20.6** Deschênes, M., Bourassa, J., & Parent, A. (1996).

Striatal and cortical projections of single neurons from the central lateral thalamic nucleus in the rat. *Neuroscience*, 72, 679–687.

Chapter 21. Visual Systems: The Retinal Projections

21.1b and 21.4c From Le Gros Clark, W. E. (1932). A morphological study of the lateral geniculate body. *British Journal of Ophthalmology*, 16 (5), 264–284. **21.4a** From Hubel, D. H. (1988). *Eye, brain, and vision*. Scientific American Library. New York: Freeman. **21.4b** Courtesy of Dr. Bjorn Merker of Sweden. **21.11** Reconstruction by K. Hsiao and G. E. Schneider. **21.12** Butler, A. B., & Northcutt, R. G. (1992). Retinal projections in the bowfin, *Amia calva*: Cytoarchitectonic and experimental analysis. *Brain, Behavior and Evolution*, 39, 169–194. Color added by G. Schneider. **21.13** Based on Butler, A. B., & Hodos, W. (2005). *Comparative vertebrate neuroanatomy: Evolution and adaptation*, 2nd ed. New York: John Wiley & Sons. **21.14** From Parent, A., Dube, L., Braford, M. R., Jr., & Northcutt, R. G. (1978). The organization of monoamine-containing neurons in the brain of the sunfish (*Lepomis gibbosus*) as revealed by fluorescence microscopy. *Journal of Comparative Neurology*, 182, 495–516. **21.15** From Butler, A. B., & Hodos, W. (2005). *Comparative vertebrate neuroanatomy: Evolution and adaptation*, 2nd ed. New York: John Wiley & Sons. Their figure based on: Vanegas, H., Laufer, M., & Amat, J. (1974). The optic tectum of perciform teleost I. general configuration and cytoarchitecture. *Journal of Comparative Neurology*, 154 (1) 43–60. **21.16a** Foster, R. E., & Hall, W. C. (1975). The connections and laminar organization of the optic tectum in a reptile (*Iguana iguana*). *Journal of Comparative Neurology*, 163 (4), 397–425. **21.16b** Szekely, G., Setalo, G., & Lazar, G. (1973). Fine structure of the frog's optic tectum: Optic fibre termination layers. *Journal für Hirnforschung*, 14, 189–225. **21.17** Schneider, G. E. (1973). Early lesions of superior colliculus: Factors affecting the formation of abnormal retinal projections. *Brain, Behavior and Evolution*, 8, 73–109.

Chapter 22. The Visual Endbrain Structures

22.1 Drawings based on neuroanatomical tracing studies by the author; ideas from developmental studies, and from S. O. E. Ebbesson. **22.3** From Balaban, C. D., & Ulinski, P. S. (1981). Organization of thalamic afferents to anterior dorsal ventricular ridge in turtle. I. projections of thalamic nuclei. *Journal of Comparative Neurology*, 200 (1), 95–129. Colors added using findings of Heller, S. B., & Ulinsky, P. S. (1987). Morphology of geniculocortical axons in turtles of the genera *Pseudemys* and *Chrysemys*. *Anatomy and Embryology*, 175 (4), 505–515. **22.4** From Hubel, D. H. (1988) *Eye, brain, and vision*. Scientific American Library. New York: Freeman. **22.5** From Flechsig, P. (1920). *Antonie des menschlichen gehirns und rückenmarks auf mylogenetischer grundlage*, Vol. 1. Leipzig: Georg Thieme. **22.6** Larroche, J.-C. (1966). The development of the central nervous system during intrauterine life. In Falkner, F., ed. *Human development*. Philadelphia: W. B. Saunders. **22.7a and 22.8** Based on Nauta, W. J. H. & Feirtag, M. (1986). *Fundamental neuroanatomy*. New York: W. H. Freeman. **22.9** From Allman, J. M., & Kaas, J. H. (1976). Representation of the visual field on the medial wall of occipital-parietal cortex in the owl monkey. *Science*, 191 (4227), 572–575. **22.10** From Wang, Q., & Burkhalter, A. (2007). Area map of mouse visual cortex. *Journal of Comparative Neurology*, 502 (3), 339–357. **22.11** From Rosa, M. G. P., & Krubitzer, L. A. The evolution of visual cortex: Where is V2? *Trends in Neuroscience*, 22 (6), 242–248. **22.12** Based on: Sereno, M., & Allman, J. (1991). Cortical visual areas in mammals. In Leventhal, A. G., ed. *The neural basis of visual function* (pp. 160–172). London: Macmillan. Stepniewska, I., Preuss, T. M., & Kaas, J. H. (1993). Architectonics, somatotopic organization, and ipsilateral cortical connections of the primary motor area (M1) of owl monkeys. *Journal of Comparative Neurology*, 330 (2), 238–271. Catania, K. C., Collins, C. E., & Kaas, J. H. (2000). Organization of sensory cortex in the East African hedgehog (*Atelerix albiventris*). *Journal of Comparative Neurology*, 421(2), 256–274. **22.13 and 22.14** Based on Schmähmann, J. D., & Pandya, D. N. (2006). *Fiber pathway of the brain*. New York: Oxford University Press.

Chapter 23. Auditory Systems

23.3 From Frost, S. B., & Masterton, B. (1992). Origin of auditory cortex. In Webster, D. B., Fay, R. R., & Popper, A. N., eds. *The evolutionary biology of hearing* (pp. 655–671). New York: Springer-Verlag. **23.4** From Lindsay, P. H., & Norman, D. A. (1977) *Human information processing: An introduction to psychology* (2d ed.). New York: Academic Press. **23.5** From Allman, J. A. (2000). *Evolving brains*. Scientific American Library. New York: Freeman. **23.6** From Dooling, R. J. (1980). Behavior and psychophysics of hearing in birds. In Popper, A. N., &

Chapter 24. Forebrain Origins: From Primitive Appendage to Modern Dominance

24.1 From Northcutt, R. G. (2002). Understanding the vertebrate brain evolution. *Integrative and Comparative Biology*, 42 (4), 743–756. **24.2** Based on: (a) Striedter, G. F. (2005). *Principles of brain evolution*. Sunderland, MA: Sinauer Associates. (b) Nieuwenhuys, R., Donkelaar, H. J. T., & Nicholson, C. (1998). *The central nervous system of vertebrates*. New York: Springer. With additional information from Romer, A. S., & Parsons, T. S. (1977). *The vertebrate body*, 5th ed. Philadelphia: Saunders. **24.3** Based on: Striedter, G. F. (2005). *Principles of brain evolution*. Sunderland, MA: Sinauer Associates. Nieuwenhuys, R., Donkelaar, H. J. T., & Nicholson, C. (1998). *The central nervous system of vertebrates*. New York: Springer. With additional information from Papez, J. W. (1929). *Comparative neurology: A manual and text for the study of the nervous system of vertebrates*. New York: Thomas Y. Crowell. **24.4** Based on Striedter, G. F. (2005). *Principles of brain evolution*. Sunderland, MA: Sinauer Associates. **24.5** From Sherry, D., & Duff, S. (1996). Behavioural and neural bases of orientation in food-storing birds. *Journal of Experimental Biology*, 199, 165–172.

Chapter 25. Regulating the Internal Milieu and the Basic Instincts

25.1 Based on Mesulam, M.-M. (2000). *Principles of behavioral and cognitive neurology*, 2nd ed. New York: Oxford University Press. **25.2** Based on Brownstein, M. J., Russell, J. T., & Gainer, H. (1980). Synthesis, transport, and release of posterior pituitary hormones. *Science*, 207, (4429) 373–378. **25.3** Based on Chi, C. C., & Flynn, J. P. (1971). Neural pathways associated with hypothalamically elicited attack behavior in cats. *Science*, 171, 703–706.

Chapter 26. Core Pathways of the Limbic System, with Memory for Meaningful Places

26.1 From Le Gros Clark, W. E. (1936). The topography and homologies of the hypothalamic nuclei in man. *Journal of Anatomy*, 70 (Pt 2), 203–214. **26.3** based on Johnson, A. K., & Gross, P. M. (1993). Sensory circum-ventricular organs and brain homeostatic pathways. *FASEB Journal*, 7 (8), 678–686. **26.4** From Broadwell, R. D., Balin, B. J., Charlton, H. M., & Salzman, M. (1987). Angioarchitecture of the CNS, pituitary gland, and intracerebral grafts revealed with peroxidase cytochemistry. *Journal of Comparative Neurology*, 260 (1), 47–62. **26.9** Adapted from Mesulam, M.-M. (2000). *Principles of behavioral and cognitive neurology*, 2nd ed. New York: Oxford University Press.

Chapter 27. Hormones and the Shaping of Brain Structures

27.1, 27.2, and table 27.1 Adapted from Swaab, D. F., & Hofman, M. A. (1995). Sexual differentiation of the human hypothalamus in relation to gender and sexual orientation. *Trends in Neuroscience*, 18 (6), 264–270. **27.3** From Nottebohm, F., & Arnold, A. P. (1976). Sexual dimorphism in vocal control areas of the songbird brain. *Science*, 194, 211–213. **27.4 and 27.5** Based on Butler, A. B., & Hodos, W. (1996). *Comparative vertebrate neuroanatomy: Evolution and adaption*. New York: Wiley-Liss. **27.6** From Nottebohm, F. (1989). From bird song to neurogenesis. *Scientific American*, 260, 74–79. Courtesy of Patricia J. Wynne.

Chapter 28. The Medial Pallium Becomes the Hippocampus

28.1 Figure from Matthew Wilson, MIT; originally from Wilson, M. A., & McNaughton, B. L. (1993). Dynamics of the hippocampal ensemble code for space. *Science*, 261, 1055–1059. **28.3** Adapted from Northcutt, R. G., Reiner, A., & Karten, H. J. (1988). Immunohistochemical study of the telencephalon of the spiny dogfish, *Squalus acanthias*. *Journal of Comparative Neurology*, 277, 250–267. **28.4** Adapted from Reiner, A., & Northcutt, R. G. (1987). An immunohistochemical study of the telencephalon of the African lungfish, *Protopterus annectens*. *Journal of Comparative Neurology*, 256, 463–481. **28.5** Adapted from Wilczynski, W., & Northcutt, G. (1983). Connections of the bullfrog striatum: Efferent projections. *Journal of Comparative Neurology*, 214, 333–343. **28.6** From Oswaldo-Cruz, E., & Rocha-Miranda, C. E. (1968). *The brain of the opossum* (*Didelphis marsupialis*). Instituto de Biofísica, Universidade Federal do Rio de Janeiro. **28.7** From Paxinos, G., & Watson, C. (1982). *The rat brain in stereotaxic coordinates*. New York: Academic Press. **28.8** Rat sketches from Witter, M. P., Wouterlood, F. G., Naber, P. A., & Van Haeften, T. (2000). Anatomical organization of the parahippocampal-hippocampal network. *Annals of the New York Academy of Sciences*, 911 (The Parahippocampal Region: Implications for Neurological and Psychiatric Diseases), 1–24. **28.9 and 28.11** Based on Brodal, P. (2004). *The central nervous system: Structure and function*, 3rd ed. New York: Oxford University Press. **28.10a** From Ramón y Cajal, S. (1995). *Histology of the nervous system of man and vertebrates*. Translated from the French by N. Swanson & L. W. Swanson. New York and Oxford: Oxford University Press. **28.10b** From van Strien, N. M., Cappaert, N. L. M., & Witter, M. P. (2009). The anatomy of memory: An interactive overview of the parahippocampal–hippocampal network. *Nature Reviews Neuroscience* 10, 272–28. **28.12** Based on Lund, R. D. (1978). *Development and plasticity of the brain: An introduction*. New York: Oxford University Press. **28.14** From Hasselmo, M. E. (1999). Neuro-modulation: Acetylcholine and memory consolidation. *Trends in Cognitive Sciences*, 3, 351–359.

Chapter 29. The Limbic Striatum and Its Outpost in the Temporal Lobe

29.1 Modification of figure 26.9, adapted from Mesulam, M.-M. (2000). Patterns in behavioral neuroanatomy: Association areas, the limbic system, and hemispheric specialization. In Mesulam, M.-M., ed. *Principles of behavioral and cognitive neurology*, 2nd ed. New York: Oxford University Press. **29.2** Based on Lammers, H. J. (1972). The neural connections of the amygdaloid complex in mammals. In Eleftheriou, B., ed. *The neurobiology of the amygdalia; the proceedings of a Symposium on the Neurobiology of the Amygdala, Bar Harbor, Maine, June 6–17, 1971*. New York: Plenum Press. **29.3** Modification of figure 2.2, adapted from Swanson, L. W. (1992). *Brain maps: Structure of the rat brain*. Amsterdam: Elsevier Science. **29.6** Gluhbegovic, N., & Williams, T. H. (1980). *The human brain: A photographic guide*. New York: Harper and Row. **29.7** Based on descriptions by Downer, J. D. C. (1961). Changes in visual gnostic function and emotional behavior following unilateral temporal lobe damage in the “split-brain” monkey. *Nature*, 191, 50–51. **29.8** From Ledoux, J. E. (1994). Emotion, memory and the brain. *Scientific American*, 270 (6), 50–57. Figure drawn by Roberto Osti. **29.11 (top)** Hyde, T. M., & Weinberger, D. K. (1990). The brain in schizophrenia. *Seminars in Neurology*, 10, 276–286. **29.11 (bottom)** Shenton, M. E., Kikinis, R., Jolesz, F. A., Pollak, S. D., LeMay, M., Wible, C. G., & McCarley, R. W. (1992). Abnormalities of the left temporal lobe and thought disorder in schizophrenia. *New England Journal of Medicine*, 327, 604–612.

Chapter 30. The Major Subpallial Structure of the Endbrain

Table 30.1 Based on Swanson, L. W. (2003). *Brain architecture: Understanding the basic plan*. New York: Oxford University Press. **30.2, 30.7, 30.8, 30.10a, and 30.11** Based on Brodal, P. (2004). *The central nervous system:*

Structure and function, 3rd ed. New York: Oxford University Press. **30.3** Deschênes, M., Bourassa, J., & Parent, A. (1996). Striatal and cortical projections of single neurons from the central lateral thalamic nucleus in the rat. *Neuroscience*, 72, 679–687. **30.10b** From Voorn, P., Louk Vanderschuren, L. J. M. J., Groenewegen, H. J., Robbins, T. W., & Pennartz, C. M. A. (2004). Putting a spin on the dorsal-ventral divide of the striatum. *Trends in Neurosciences*, 2, 468–474. **30.12** From Nauta, W. J. H., & Feirtag, M. (1986). *Fundamental neuroanatomy*. New York: W. H. Freeman.

Chapter 31. Lost Dopamine Axons: Consequences and Remedies

31.1 From Olanow, C. W., Kordower, J. H., & Freeman, T. B. (1996). Fetal nigral transplantation as a therapy for Parkinson's disease. *Trends in Neuroscience*, 19, 102–109. **31.2** From Doering, L. C., & Snyder, E. Y. (2000). Cholinergic expression by a neural stem cell line grafted to the adult medial septum/diagonal band complex. *Journal of Neuroscience Research*, 61, 597–604.

Intermission: Neurogenesis in Mature Brains

31a.1 Kempermann, G., & Gage, F. H. New nerve cells for the adult brain. *Scientific American*, May 1999. Photographs by Linda Kitabayashi / Salk Institute.

Chapter 32. Structural Origins of Object Cognition, Place Cognition, Dexterity, and Planning

32.1a From von Bonin, G. (1950). *Essay on the cerebral cortex*. Springfield, IL: Charles C Thomas. **32.1b** From Poliakov, G. L. (1968). On the structural mechanisms of functional states in neurons of the cerebral cortex. In Asratyan, E. A., ed. *Brain reflexes* (Progress in Brain Research, Vol. 22, pp. 98–106). Amsterdam: Elsevier. **32.3** Adapted from Mesulam, M.-M. (2000). *Principles of behavioral and cognitive neurology*, chap. 1. Oxford: Oxford University Press. **32.4** From Schneider, G. E. (1975). Two visuomotor systems in the Syrian hamster. In Ingle, D., & Sprague, J. M., eds. *Neurosciences Research Program bulletin*, 13, 255–257. **32.5** Based on: Striedter, G. F. (2005). *Principles of brain evolution*. Sunderland, MA: Sinauer Associates; and Butler, A. B. (1994). The evolution of the dorsal thalamus of jawed vertebrates, including mammals: Cladistic analysis and a new hypothesis. *Brain Research Reviews*, 19, 29–65. **32.6** From Herrick, C. J. (1910). The morphology of the forebrain in amphibia and reptilian. *Journal of Comparative Neurology and Psychology*, 20 (5), 413–547. Labels altered. **32.7** From Striedter, G. F. (2005). *Principles of brain evolution*. Sunderland, MA: Sinauer Associates.

Chapter 33. Basic Neocortical Organization: Cells, Modules, and Connections

33.1 From Kwan, K. Y., Šestan, N., & Anton, E. S. (2012). Transcriptional co-regulation of neuronal migration and laminar identity in the neocortex. *Development*, 139, 1535–1546. **33.2** From Scheibel, M. E., & Scheibel, A. B. (1970). Elementary processes in selected thalamic and cortical subsystems—the structural substrates. In Schmitt, F. O. ed. *The neurosciences: Second study program* (1970). New York: The Rockefeller University Press. **33.3** From Larroche, J.-C. (1966). The development of the central nervous system during intrauterine life. In Falkner, F., ed. *Human development* (pp. 257–276). Philadelphia: W. B. Saunders Company. **33.4** From Le Gros Clark, W. E. (1976). Central nervous system. In: Hamilton, W. J., ed. *Textbook of human anatomy*, 2nd ed. London: Macmillan Press. **33.5** From Brodmann, K. (1868–1918). Brodmann's localisation in the cerebral cortex. Translated with editorial notes and an introduction by Laurence J. Garey. London: Imperial College Press. **33.6** From LeVay, S., Connolly, M., Houde, J., & Van Essen, D. C. (1985). The complete pattern of ocular dominance stripes in the striate cortex and visual field of the macaque monkey. *Journal of Neuroscience*, 5 (2), 486–501. **33.7** From Goldman, P. S., & Nauta, W. J. H. (1977). Columnar distribution of cortico-cortical fibers in the frontal association, limbic, and motor cortex of the developing rhesus monkey. *Brain Research*, 122, 393–414. **33.8** [Credit line to come.] **33.13** From Nauta, W. J. H., & Feirtag, M. (1986). *Fundamental neuroanatomy*. New York: W. H. Freeman. **33.14** Based on: Schmähmann, J., & Pandya, D. N. (2006). Fiber pathways of the brain. New York: Oxford University Press; Petrides, M., & Pandya, D. N. (2007). Efferent association pathways from the rostral prefrontal cortex in the macaque monkey. *Journal of Neuroscience*, 27, 11573–11586; Schmähmann, J. D., Pandya,

D. N., Wang, R., Dai, G., D'Arceuil, H. E., de Crespigny, A. J., & Wedeen, V. J. (2007). Association fibre pathways of the brain: Parallel observations from diffusion spectrum imaging and autoradiography. *Brain*, 130, 630–653. **33.15** From Perani, D., Saccuman, M. C., Scifo, P., Anwander, A., Spada, D., Baldoli, C. & Friederici, A. D. (2011). Neural language networks at birth. *PNAS*, 108, (38) 16056–16061. **33.17** From Poliakov, G. I. (1972). *Neuron structure of the brain*. Cambridge, MA: Harvard University Press. **33.18** From von Bonin, G. (1950). *Essay on the cerebral cortex*. Springfield, IL: Charles C Thomas.

Chapter 34. Structural Change in Development and in Maturity

34.1a From Bystron, I., Blakemore, C., & Rakic, P. (2008). Development of the human cerebral cortex: Boulder Committee revisited. *Nature Reviews Neuroscience*, 9, 110–122. **34.1b** From Naegele, J. R., Jhaveri, S., & Schneider, G. E. (1988). Sharpening of topographical projections and maturation of geniculocortical axon arbors in the hamster. *Journal of Comparative Neurology*, 277 (4), 593–607. **34.2 and 34.6 a, b, and c** From Rakic, P. (1995). A small step for the cell, a giant leap for mankind: A hypothesis of neocortical expansion during evolution. *Trends in Neurosciences*, 18 (9), 383–388. **34.3 and 34.4** Data from: Stephan, H., Frahm, H., & Baron, G. (1981). New and revised data on volumes of brain structures in insectivores and primates. *Folia Primatologica*, 35, 1–29. Analysis by and figure from Finlay, B. L., & Darlington, R. B. (1995). Linked regularities in the development and evolution of mammalian brains. *Science*, 268, 1578–1584. **34.5** From Rakic, P. (1981). Development events leading to lamina and areal organization of the neocortex. In Schmitt, F. O., ed. *The organization of the cerebral cortex: Proceedings of a neurosciences research program colloquium*. Cambridge, MA: The MIT Press. **34.6d** From Rakic, P. (1972). Mode of cell migration to the superficial layers of fetal monkey neocortex. *Journal of Comparative Neurology*, 145 (1), 61–84. **34.7** From Meister, M., Wong, R. O. L., Baylor, D. A., & Shatz, C. J. (1991). Synchronous bursts of action potentials in ganglion cells of the developing mammalian retina. *Science*, 252, 939–943. **34.8** From Antonini, A., & Stryker, M. P. (1993). Rapid remodeling of axonal arbors in the visual cortex. *Science*, 260, 1819–1821. **34.9** From Goodman, C. S., & Shatz, C. J. (1993). Development mechanisms that generate precise patterns of neuronal connectivity. *Cell*, 72 (Suppl.), 77–98. **34.10** From Sur, M., Angelucci, A., & Sharma, J. (1999). Rewiring cortex: The role of patterned activity development and plasticity of neocortical circuits. *Journal of Neurobiology*, 41 (1), 33–43. **34.11** From Karlen, S. J., & Krubitzer, L. (2009). Effects of bilateral enucleation on the size of visual and nonvisual areas of the brain. *Cerebral Cortex* 19 (6), 1360–1371. **34.12** From Sur, M. (1995). Maps of time and space. *Nature*, 378, 13–13. **34.13** From Wang, X., Merzenich, M. M., Sameshima, K., & Jenkins, W. M. (1995). Remodelling of hand representation in adult cortex determined by timing of tactile stimulation. *Nature*, 378, 71–75.
