Preface	xi
About the companion website	xiii
<b>1 Introduction</b>	<b>1</b>
1.1 Requirements of plant breeders	1
1.2 Evolution of crop species	4
1.2.1 Why did hunter-gatherers become farmers?	4
1.2.2 What crops were involved? And when did they arise?	5
1.3 Natural and human selection	8
1.4 Contribution of modern plant breeders	8
Think questions	11
<b>2 Modes of Reproduction and Types of Cultivar</b>	<b>13</b>
2.1 Introduction	13
2.2 Modes of reproduction	15
2.2.1 Sexual reproduction	15
2.2.2 Asexual reproduction	16
2.3 Types of cultivar	17
2.3.1 Pure-line cultivars	17
2.3.2 Open-pollinated cultivars	17
2.3.3 Hybrid cultivars	18
2.3.4 Clonal cultivars	18
2.3.5 Synthetic cultivars	18
2.3.6 Multiline cultivars	18
2.3.7 Composite-cross cultivars	19
2.4 Annuals and perennials	19
2.5 Reproductive sterility	19
Think questions	19
<b>3 Breeding Objectives</b>	<b>21</b>
3.1 Introduction	21
3.2 People, politics and economic criteria	22
3.3 Grower profitability	25

3.3.1	Increasing harvestable yield	26
3.3.2	Selection for yield increase	27
3.4	Increasing end-use quality	28
3.4.1	Testing for end-use quality	30
3.5	Increasing pest and disease resistance	31
3.6	Types of plant resistance	34
3.7	Mechanisms for disease resistance	35
3.8	Testing plant resistance	36
3.9	Conclusions	38
	Think questions	38
<b>4</b>	<b>Breeding Schemes</b>	<b>40</b>
4.1	Introduction	40
4.2	Development of pure-line cultivars	40
4.2.1	Homozygosity	41
4.2.2	Breeding schemes for pure-line cultivars	43
4.2.3	Number of segregating families and selections	46
4.2.4	Seed increases for cultivar release	46
4.3	Developing multiline cultivars	47
4.3.1	Backcrossing	48
4.4	Development of open-pollinated population cultivars	49
4.4.1	Breeding schemes for open-pollinating population cultivars	49
4.4.2	Backcrossing in open-pollinated population cultivar development	51
4.5	Developing synthetic cultivars	51
4.5.1	Seed production of a synthetic cultivar	53
4.6	Developing hybrid cultivars	53
4.6.1	Heterosis	55
4.6.2	Types of hybrid	58
4.6.3	Breeding system for $F_1$ hybrid cultivars	58
4.6.4	Backcrossing in hybrid cultivar development	59
4.6.5	Hybrid seed production and cultivar release	60
4.7	Development of clonal cultivars	61
4.7.1	Outline of a potato breeding scheme	61
4.7.2	Time to develop clonal cultivars	62
4.7.3	Sexual reproduction in clonal crops	63
4.7.4	Maintaining disease-free parental lines and breeding selections	64
4.7.5	Seed increase of clonal cultivars	64
4.8	Developing apomictic cultivars	64
4.9	Summary	65
	Think questions	65
<b>5</b>	<b>Genetics and Plant Breeding</b>	<b>68</b>
5.1	Introduction	68
5.2	Qualitative genetics	68
5.2.1	Genotype/phenotype relationships	70
5.2.2	Segregation of qualitative genes in diploid species	70
5.2.3	Qualitative loci linkage	72
5.2.4	Pleiotropy	76
5.2.5	Epistasis	76

5.2.6	Qualitative inheritance in tetraploid species	77
5.2.7	The chi-square test	79
5.2.8	Family size necessary in qualitative genetic studies	81
5.3	Quantitative genetics	82
5.3.1	The basis of continuous variation	82
5.3.2	Describing continuous variation	83
5.3.3	Relating quantitative genetics and the normal distribution	86
5.3.4	Quantitative genetics models	87
5.3.5	Testing the models	90
5.3.6	Quantitative trait loci	97
	Think questions	101
<b>6</b>	<b>Predictions</b>	<b>104</b>
6.1	Introduction	104
6.1.1	Genotype $\times$ environment interactions	104
6.1.2	Genetically based predictions	105
6.2	Heritability	106
6.2.1	Broad-sense heritability	107
6.2.2	Narrow-sense heritability	108
6.2.3	Heritability from offspring – parent regression	109
6.3	Diallel crossing designs	110
6.3.1	Griffing's analysis	111
6.3.2	Hayman and Jinks' analysis	116
6.4	Cross prediction	119
	Think questions	120
<b>7</b>	<b>Selection</b>	<b>125</b>
7.1	Introduction	125
7.2	What to select and when to select	125
7.2.1	Qualitative trait selection	126
7.2.2	Quantitative trait selection	126
7.2.3	Positive and negative selection	126
7.3	Response to selection	127
7.3.1	Association between traits or years	129
7.3.2	Heritability and its limitations	130
7.3.3	Methods of selection	131
7.3.4	Errors in selection	133
7.4	Applied selection	136
7.4.1	Number of genotypes in initial populations	136
7.4.2	Early generation selection	139
7.4.3	Intermediate generation selection	141
7.4.4	Advanced generation selection	143
7.4.5	Analysis of location trials	146
7.5	Cross prediction	151
7.5.1	Univariate cross prediction	152
7.5.2	Multivariate cross prediction	157
7.6	Parental selection	159
7.6.1	Phenotypic evaluation	160
7.6.2	Genotypic evaluation	160

7.6.3	Parental combinations	161
7.6.4	Germplasm collections	162
	Think questions	163
<b>8</b>	<b>Broadening the Genetic Basis</b>	<b>168</b>
8.1	Induced mutations	168
8.1.1	Methods of increasing the frequency of mutation	169
8.1.2	Types of mutation	169
8.1.3	Plant parts to be treated	170
8.1.4	Dose rates	170
8.1.5	Dangers of using mutagens	171
8.1.6	Impact of mutation breeding	171
8.1.7	Practical applications	172
8.2	Interspecific and intergeneric hybridization	174
8.2.1	Characters introduced to crops from wild related species	174
8.2.2	Factors involved in interspecific or intergeneric hybridization	175
8.2.3	Post-fertilization	176
8.2.4	Hybrid sterility	176
8.2.5	Backcrossing	176
8.2.6	Increasing genetic diversity	177
8.2.7	Creating new species	177
8.3	Plant genetic transformation	177
8.3.1	A glimpse at the genetic transformation of plants	179
8.3.2	Some applications of genetic engineering to plant breeding	181
8.3.3	Cautions and related issues	183
	Think questions	183
<b>9</b>	<b>Contemporary Approaches in Plant Breeding</b>	<b>185</b>
9.1	Introduction	185
9.2	Tissue culture	185
9.2.1	Doubled haploids	185
9.2.2	Some potential issues	186
9.2.3	<i>In vitro</i> multiplication	188
9.3	Molecular markers in plant breeding	188
9.3.1	Theory of using markers	188
9.3.2	Types of marker systems	190
9.3.3	Molecular markers	191
9.3.4	Uses of molecular markers in breeding programmes	192
9.3.5	Issues with markers	195
9.3.6	The increasing availability of genome sequences	195
	Think questions	197
<b>10</b>	<b>Practical Considerations</b>	<b>198</b>
10.1	Introduction	198
10.2	Experimental design	198
10.2.1	Unreplicated designs	199
10.2.2	Randomized designs	201
10.2.3	The increasing role of linear mixed model approaches to analyse breeding data	203

10.3	Greenhouse management	204
10.3.1	Artificial hybridization	204
10.3.2	Seed and generation increases	206
10.3.3	Evaluation of breeding lines	206
10.3.4	Environmental control	207
10.3.5	Disease control	207
10.3.6	Economics	208
10.3.7	Experimental design in the glasshouse	209
10.4	Field plot techniques	209
10.4.1	Choice of land	209
10.4.2	Plot size and replication	211
10.4.3	Guard rows and discard rows	212
10.4.4	Machinery	212
10.5	Use of computers in plant breeding	214
10.5.1	Data storage and retrieval	215
10.5.2	Field plan design	217
10.5.3	Clerical operations	217
10.5.4	Data collection	217
10.5.5	Data analysis	218
10.5.6	Selection	219
10.5.7	Data transfer	220
10.5.8	Statistical consultation	220
10.5.9	Ease of use	220
10.6	Release of new cultivars	220
10.6.1	Information needed prior to cultivar release	221
10.6.2	Value in release	221
10.6.3	Cultivar names	222
	Think questions	222
<b>11</b>	<b>Current Developments in Plant Breeding</b>	<b>223</b>
11.1	Intellectual property and ownership issues	223
11.1.1	Patents	223
11.2	The impact of biotechnology	225
11.3	The regulation of genetically modified plants	227
11.4	Plant breeding as a career	228
	Further Reading	229
	Suggested Answers to Think Questions	230
	Index	271
