

Isabelle Séguy • Luc Buchet

# Handbook of Palaeodemography

Contributions by

Daniel Courgeau and Henri Caussinus

Translated by Roger Depledge

Language editing: Catriona Dutreuilh

 Springer

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Scope and Current Research Areas	1
1.1.1	Spatial Distribution of Settlements and Population Estimates Based on Archaeological Remains	1
1.1.2	Testing the Hypothesis of a Neolithic Demographic Transition	3
1.1.3	The Sociodemographic Approach Based on Bone Remains	3
1.2	Major Milestones in Palaeodemographic Research	4
1.2.1	First Attempts	4
1.2.2	Fascination for Palaeodemography	5
1.2.3	The French School and Research in the French-Speaking World Since 1992	7
1.2.4	Research Outside the French-Speaking World Since 1992	8

## Part I The Data of Interest

<b>2</b>	<b>Epistemology of the Discipline</b>	<b>13</b>
2.1	Representativeness of the Anthropological Sample	13
2.1.1	Biological Archives: Contribution and Limitations	13
2.1.2	From the World of the Dead to the World of the Living: The Question of Representativeness	14
2.1.3	Problems with Small Samples	18
2.1.4	The Migration Question	18
2.1.5	Is It Futile to Study the Demography of Archaeological Populations?	19

2.2	Ideas About Age . . . . .	20
2.2.1	Age, a Word with Many Meanings . . . . .	20
2.2.2	Civil Age, Biological Age and Social Age: An individual's Place in Society . . . . .	21
2.2.3	Towards Socially Significant Age Groups . . . . .	22
2.3	Considerations Concerning Reference Populations . . . . .	23
2.3.1	The Hypothesis of Biological Uniformity . . . . .	23
2.3.2	Towards a Pre-industrial Biological Standard? . . . . .	25
2.3.3	Influence of the Sex and Age Structure of the Reference Population . . . . .	25
2.3.4	Choice of Reference Population Structure . . . . .	28
2.3.5	Other Insidious Biases in Current Reference Collections . . . . .	29
2.3.6	Towards an Ideal Comparison Collection . . . . .	30
3	<b>The Osteological Data . . . . .</b>	31
3.1	Identifying Sex . . . . .	32
3.1.1	Adults . . . . .	32
3.1.2	Juveniles . . . . .	33
3.2	Estimating Age . . . . .	33
3.2.1	Juveniles . . . . .	34
3.2.2	Adults . . . . .	39
3.3	Problems with the Methods for Determining Age and Sex . . . . .	45
4	<b>Establishing a Reference Population . . . . .</b>	53
4.1	Establishing a New Reference Population for Adults . . . . .	54
4.1.1	Claude Masset's Reference Collection . . . . .	54
4.1.2	Adjusting the Reference Population . . . . .	63
4.1.3	The P <sub>Lisbon1889</sub> Reference Population . . . . .	70
4.2	Establishing a Reference Population for Juveniles . . . . .	73
4.2.1	Tooth Emergence and Mineralisation . . . . .	74
4.2.2	Establishing a New Comparison Collection . . . . .	75
4.2.3	Number of Mineralisation Coefficients . . . . .	75
4.2.4	Possible Variability in Tooth Development . . . . .	75
4.2.5	Selection of Teeth for Model Construction . . . . .	77
4.2.6	Adapting the Reference Population . . . . .	77
4.3	Age Groups as Yet Inaccessible . . . . .	80
4.3.1	Estimating Age at Death for Infants . . . . .	80
4.3.2	Estimating Age at Death for Adolescents and Young Adults . . . . .	80

## Part II Reconstructing Demographic Parameters

<b>5</b>	<b>Age at Death: Current Approaches and Methods</b>	<b>85</b>
5.1	General Methodological Principles	85
5.2	Estimation by the “Probability Vector” Method	86
5.2.1	Outline of the “Probability Vector” Method	86
5.2.2	A New Age Estimation for a Set of Buried Adults	87
5.2.3	Estimating Age at Death of a Sample of Buried Immature Subjects	87
5.2.4	Adaptations to Particular Contexts	94
5.3	“Estimator” Method	95
5.3.1	Outline of the “Estimator” Method	95
5.3.2	“Revised Estimators”	96
5.3.3	Brainstorming	98
<b>6</b>	<b>Current Demographic Models</b>	<b>99</b>
6.1	Review of Basic Hypotheses in Palaeodemography	99
6.2	Population Models	100
6.2.1	The Stable Population Concept in Palaeodemography	100
6.2.2	Semi-stable and Quasi-stable Populations	101
6.2.3	Migration	102
6.3	Various Mortality Regimes	103
6.3.1	Model Life Tables	103
6.3.2	Main Life Tables Used by Demographers	104
6.3.3	Main Mortality Models Used by Palaeodemographers	106
6.4	Should Population Dynamics Be Modelled by Fertility or by Mortality?	111
<b>7</b>	<b>Finding the Right Models for Pre-industrial Populations</b>	<b>113</b>
7.1	Constraints To Be Included in the Models	114
7.1.1	A Mortality Pattern Specific to Pre-industrial Populations	114
7.1.2	Models Constructed from Inputs Accessible to Palaeodemographers	114
7.1.3	Margin of Error and Palaeodemographic Sample Size: Two Variables to Consider	116
7.1.4	Growth Rate Is Difficult to Measure, but Cannot Be Ignored	116
7.2	Modelling	117
7.2.1	Collecting the Sample of Observed Tables	117
7.2.2	Choice of Mathematical Model	118
7.2.3	Choice of Entry Parameters	119
7.2.4	Including the Population Growth Rate	119
7.2.5	Quality and Presentation of the Models	120

<b>8</b>	<b>Model Tables for Pre-industrial Populations</b>	123
8.1	Logarithmic Model	123
8.1.1	Preliminary Hypotheses for the Multiple Linear Regression	124
8.1.2	Preliminary Hypotheses for the Simple Linear Regression	124
8.1.3	Quality of Proposed Regressions	125
8.2	Estimating of Probabilities from Palaeodemographic Variables	126
8.2.1	Juvenility Index ( <i>JJ</i> ) and Indicator <i>P</i>	126
8.2.2	Mean age of Deceased Children Aged 5 to 14: $a_{5-14}$ (Both Sexes)	127
8.2.3	Mean Adult Age at Death ( $a_{20}$ )	130
8.3	Regressions from Probabilities of Dying	131
8.3.1	Regressions from the Preceding Probability	131
8.3.2	Regressions from the Following Probability	132
8.4	Multi-input Models	135
8.5	Models with Migration	138
8.5.1	Models for Emigration of Young Adults of Both Sexes	139
8.5.2	Models for Immigration of Mature Men	139
8.6	Conclusions and Recommendations	139
<b>9</b>	<b>Definition and Exploration of a Pre-industrial Standard</b>	143
9.1	The Brass Method	144
9.2	Necessary Adaptations for Palaeodemographic Data	145
9.3	Pre-industrial Standard	146
9.3.1	Characteristics	146
9.3.2	Differential Mortality	146
9.4	Establishing Model Tables with the Brass Method	151
9.4.1	Construction Method	152
9.4.2	Panels of Proposed Life Tables (Both Sexes Combined)	156
9.4.3	Atypical Life Tables	159
9.5	Conclusions	161

### Part III Developing a Study Protocol

<b>10</b>	<b>Final Overview</b>	165
10.1	Assessing the Usefulness of the Study	165
10.2	Sample Representativeness	166
10.2.1	Importance of Sample Size	166
10.2.2	Population Structure	167

10.3	Basic Anthropological Data: A Pragmatic	
	Choice of Methods . . . . .	168
10.3.1	Determining Sex . . . . .	168
10.3.2	Estimating the Age at Death of a Skeleton . . . . .	168
10.4	Estimating Age at Death for a Buried Population . . . . .	170
10.4.1	Why Shift from Individual Ages to Collective Age? . . . . .	170
10.4.2	Maintaining a Probabilistic Approach to Age . . . . .	171
10.4.3	Use of a Pre-industrial Reference Standard . . . . .	171
10.5	New Palaeodemographic Tools . . . . .	171
10.5.1	The Revised "PFP" Method (Probability Vectors) . . . .	172
10.5.2	New Life Tables for Palaeodemographers . . . . .	172
11	Examples of Archaeological Applications . . . . .	177
11.1	Sites for Which Only Biological Sources Are Available . . . .	178
11.1.1	Frénouvillle Rural Cemetery (Calvados, N.W. France, Fourth Century AD Sector) . . . . .	178
11.1.2	Lisieux Urban Cemetery (Calvados, N.W. France, Fourth Century AD Sector) . . . . .	190
11.2	Examples from Sites for Which Biological and Statistical Sources Are Available . . . . .	198
11.2.1	Monastic Cemetery at Maubuisson, Val d'Oise (Paris Region) (Seventeenth and Eighteenth Century Convent Population) . . . . .	199
11.2.2	The Urban Cemetery of Antibes, Alpes-Maritimes (Small Port and Garrison Town, End Nineteenth Century) . . . . .	204

## Part IV Further Analysis

12	Critique of Current Methods . . . . .	217
12.1	Tables of Minimum Distance Between Each Cell . . . . .	218
12.1.1	Historical Background . . . . .	218
12.1.2	Table Subject to Constraints . . . . .	219
12.1.3	Table Subject to Constraints and Coming as Close as Possible to an Initial Table . . . . .	220
12.1.4	Critique . . . . .	226
12.2	Tables of Minimum Distance Between Each Column . . . . .	226
12.2.1	Historical Background . . . . .	227
12.2.2	Maximum Likelihood Estimator . . . . .	233
12.2.3	Approximation Method . . . . .	235
12.2.4	Summary of the Two Methods . . . . .	237
12.2.5	Critique . . . . .	246
12.3	Conclusions . . . . .	253

<b>13</b>	<b>A New Method for Estimating Age-at-Death Structure . . . . .</b>	<b>255</b>
13.1	Introduction . . . . .	255
13.2	A Bayesian Estimation Method . . . . .	256
13.2.1	Model and Principle . . . . .	256
13.2.2	Use in Practice . . . . .	259
13.3	Brief Simulation Study . . . . .	263
13.4	Examples of Archaeological Application . . . . .	274
13.5	Conclusion . . . . .	284
<b>Authors and Contributors . . . . .</b>		<b>287</b>
<b>Bibliography . . . . .</b>		<b>289</b>
